

	AUTO FLIGHT FAULT ISOLATION AND DETECTION	1.22.50	P 1
		SEQ 001	REV 07

DESCRIPTION

The Fault Isolation and Detection System (FIDS) is installed in FMGC 1. The system achieves the following functions :

- detection and memorization of all internal and external failures
- tests initiation

The FIDS serves as the system BITE (maintenance data concentration).

It is connected to the BITE's of the various AFS computers (FM, FG, FE, FCU, MCDU) and linked to the CMS.

Display and interrogation of FIDS function are done by selecting appropriate key on the MCDU page.
