

Hello gentlemen!

Here you have the widescreen modification of **Samdim's An-24RV**, adapted to **16:9**. The zip as you can see is 7 MB +/- and unzip is about 45 MB. I included all the gauges I use with this panel. Feel free to make any changes as you please.

Before continuing, I would like to pay my deepest respect to all the developers who give life to airplanes and give us a lot to enjoy. Very special gratitude to **Mr. Stepan Gritsevsky, Michal Mitin, Dimitri Samborski** as well as others, whose names I do not know, for making these dreams possible.

As this panel was not meant to be published but only for my personal use, I am just sharing it with all the simmers who love the An-24 as much as I do. Therefore, there are couple of things I would like make clear:

1. I do not take any responsibility for problems in your respective systems due to the use of this panel. **It works fine in my system** and I am very satisfied with the result.
2. I did not have enough time to check the panel as it is zipped. Please, let me know if you notice any missing gauges or if you have any issue with panel I will do my best to help and upload whatever would be needed.
3. I uploaded the panel to Rapidshare.com because I don't want to publish it without testing it. If it works fine in your systems, please feel free to upload it to **Avsim.su**.
4. I fly **VC** most of the times and for this reason I do not use side-views to minimize fps as much as possible. If you fly **2D**, please add the bitmaps and add the respective entries into the PANEL.CFG. If there is any beginner using this panel and does not know how to make the entries in the **panel.cfg**, please let me know through this forum and I will upload a **new panel.cfg** including the side-views.

Well gentlemen, this is all for now! If you have any questions or problems please let me know and I will do my best to help and solve it.

God bless you all and ENJOY IT!
