NOISE

NOISE ABATEMENT

GENERAL

With purpose of noise abatement, special take-off and landing procedures are performed by crews of all aircraft types of national and foreign carriers. Performance of procedures shall not be made due to reduction of the level of safety of flights.

ARRIVALS

Final approach is performed according to established patterns, extension of the gear and wing configuration is done not less than 7 NM from FAF, the speed of flight in the pattern is not more than 215 KT.

DEPARTURES

Climbing:

Take-off to 1480'

- maintain take-off power of all engines
- retract gears
- wing configuration in take-off position with flaps 10°-30° (depending on aircraft type) and in accordance with Flight Manual
- climb at $V_2 + 11-22$ KT with the maximum rate of climb considering the pitch limitation.

At 1480'

- reduce to rated power

Between 1480' - 2960'

- the nominal capacity of all engines is kept, climb at $V_2 + 11-22$ KT.

At 2960'

- reduce rate of climb, start climb acceleration to zero flap speed
- begin retracting the flaps into flight wing configuration
- stage-by stage retracting of flaps into flight position is made
