

SAAB 105 for FSX Installation Guide:

- Unzip files to a directory of Your choice
- Run >>SAAB105FSX_Basic.exe<<
- This file is mandatory for the SAAB for FSX
- >>SAAB105FSX_Role.exe<< and >>SAAB105FSX_Special.exe<< are optional
- Normally the installer finds the path to Your FSX. If it doesn't
 - o Select path to the FSX manually but
 - The registry entry of Your FSX is not present
 - The configuration tool of the SAAB will not work proper
 - A reinstall of FSX is recommended
- After installation the configuration tool starts automatically
 - o If you want to install the other two SAAB105 Packs too, then make your choice after installing the last package. Nevertheless it isn't wrong to do it after the install of each SAAB for FSX-Pack.
 - o If you want to keep the default settings, just close the configurator.
 - o If you want to change the setting click on the realism mode you like (easy or realistic)
 - o Maybe your system gives you a warning when you click on your choice, but no fear, the links in the configurator and the .exe files are free from hazards.
 - o You can repeat your configuration anytime via the Start Menu.
 - o On your desktop there is a link to a saved flight to start with the SAAB cold and dark in LOWL. Double clicking on this link should start Your FSX with this flight
 - o Follow the checklist on the kneeboard
- Enjoy flying my absolute favourite Airplane! And just for records:
 - o This is freeware
 - o I will not accept any liability for damage on software or hardware
