General Information

Location: Birmingham Gbr
IATA Code: BHX
Lat/Long: N52° 27.2' W001° 44.9'
Elevation: 328 ft

Airport Use: Public
Magnetic Variation: 2.0°W

Fuel Types: Jet A-1
Repair Types: Minor Airframe, Minor Engine
Customs: Yes
Airport Type: IFR
Landing Fee: Yes
Control Tower: Yes
Jet Start Unit: No
LLWS Alert: No
Beacon: No
Pattern Altitude: 1000 ft AGL

Sunrise: 0510 Z
Sunset: 1904 Z,

Runway Information

Runway: 15
Length x Width: 8527 ft x 151 ft
Surface Type: asphalt
TDZ-Elev: 303 ft
Lighting: Edge, ALS, Centerline, TDZ
Displaced Threshold: 952 ft

Runway: 33
Length x Width: 8527 ft x 151 ft
Surface Type: asphalt
TDZ-Elev: 326 ft
Lighting: Edge, ALS, Centerline, TDZ
Displaced Threshold: 978 ft

Communication Information

Birmingham Radar 131.325
Birmingham Radar 118.05

1. GENERAL

1.1. ATIS

ATIS 136.02

1.2. NOISE ABATEMENT PROCEDURES

1.2.1. GENERAL

All ACFT inbound or outbound from this aerodrome are required to conform to the following procedures; notwithstanding that these may at any time be departed from to the extent necessary for avoiding immediate danger.

Every operator of ACFT using the aerodrome shall ensure at all times that ACFT are operated in a manner calculated to cause the least disturbance practicable in areas surrounding the aerodrome.

Unless on radar vectors, ACFT shall avoid the congested areas of Hampton-in-Arden and Balsall Common to the Southeast of the aerodrome and Dorridge, Knowle and Hockley Heath to the Southwest of the aerodrome.

1.2.2. NIGHT JET RESTRICTIONS/ALLOCATIONS

Birmingham APT operates a NIGHT jet Policy restricting operations of certain types of ACFT during the periods between 2300-0600LT (0800LT Sundays). Full details are available from the Airfield Duty Manager.

ACFT with a noise classification of 96 EPNdB or more must not operate during the NIGHT period. Dispensation to do so within strict guidelines must be sought from the Airfield Duty Manager.

All movements recording a level above 102 EPNdB, 6.5 km from 'start of roll' during the NIGHT period will be subject to a RWY surcharge.

Records of NIGHT infringements are available on request from the Birmingham Airport Environment Unit.

1.2.3. RUN-UP TESTS

Restrictions are imposed on the ground running of engines in the interests of noise abatement and operators are advised to contact the Airfield Duty Manager (0121-767 7139).

1.2.4. AUXILIARY POWER UNITS (APUs)

Except for stands not equipped with a serviceable Fixed Electrical Ground Power Unit, APU must be shut down immediately on arrival on stand and not restarted more than 30 minutes prior to departure without permission from the aerodrome operator. Except in an emergency, no ACFT activities involving the running of APUs shall take place on the aprons between 2300-0600LT, unless such activities are necessary in the case of an ACFT which has landed at the aerodrome before 2330LT.

1.3. LOW VISIBILITY PROCEDURES

1.3.1. GENERAL

During CAT II/III operations, special ATC procedures (ATC Low Visibility Procedures) will be applied. Pilots will be informed via ATIS or RTF when these procedures are in operation.

1.3.2. ARRIVAL

Pilots should delay the call "Runway vacated" until ACFT is clear of amber and green coded section of TWY lead-off lights.

ACFT should note that all appropriate RWY exits are illuminated.

Pilots should select the first convenient exit unless advised by ATC.

1.3.3. DEPARTURE

ATC will require ACFT to use CAT II/III holding points.

1. GENERAL

1.4. TAXI PROCEDURES

1.4.1. GENERAL

Use MIM power setting when manoeuvring.
Marshalling is mandatory for all ACFT parking on the Elmdon Apron.
Code E ACFT will be provided with Follow-me guidance when entering TWY F.
Use of TWY C is prohibited during RWY 33 operations.

TWY D adjacent to stands 42L and 54R MAX wingspan 138'/42m.

1.4.2. A380 ACFT OPERATIONS

Use of APT as an alternate for A380 operations is also subject to UK CAA approval on an individual airline basis.
Follow-me will be provided for all movements.
Departing ACFT must use CAT III RWY holds at all times.

1.5. PARKING INFORMATION

1.5.1. GENERAL

All stands are nose-in/push-back.

1.5.2. AUXILIARY POWER UNIT (APU)

Fixed Electrical Ground Power must be used whenever available and serviceable. Use of APUs and diesel Ground Power Units is subject to strict controls as set out in published APT regulations. APUs should be shut down as soon as practicable following arrival and not restarted until 30 min prior to departure.

1.5.3. DOCKING GUIDANCE SYSTEMS

Stands 1 thru 4 have directional information provided by SAFEDOCK docking guidance system.

Stands 5 thru 7 and 10 thru 12 have directional information provided by mirror.

Stand 8L, 8R, 8C and 14 thru 16 have directional information provided by marshaller's instructions.

Stands 8R, 8C and 14 thru 16 are provided with an apron drive airbridge.

Stand 13 has directional information provided by AGNIS and mirror.

Stands 20 thru 25, 62 thru 86R and Elmdon Apron (stands 501 thru 506) will be under marshaller's instruction.

Stands 40, 41C, 42C, 54C thru 56C, 56R, 57C, 57R, 58 and 59 have directional information provided by SAFEDOCK docking guidance system and are provided with an apron drive airbridge.

Stands 41L, 41R, 42L, 42R, 56L and 57L have directional information provided by SAFEDOCK docking guidance system.

Stands 60 and 61 have directional information provided by AGNIS and PAPA.

Pilots of light ACFT not using full stand facilities should await marshaller's instructions before proceeding onto stand.

Mirror, AGNIS and PAPA stand entry guidance are all calibrated for use from the LEFT hand seat.

Safedock Visual Docking Guidance may be used from either seat.

1.6. OTHER INFORMATION

Birds in vicinity of APT.
RWY 33 right-hand circuit.

WARNING: Unauthorised ground based laser lights have been directed towards ACFT in vicinity of APT. All incidents should be reported immediately via Tower to Airport Authority.

2. ARRIVAL

2.1. SPEED RESTRICTIONS

Pilots should typically expect the following speed restrictions to be enforced:

- 220 KT from the holding facility during the initial approach phase;
- 180 KT on base leg/closing heading to the final apch;
- between 180 KT and 160 KT when established on the final apch;
and thereafter 160 KT to D4.0.

These speeds are applied for ATC separation purposes and are mandatory. In the event of a new (non-speed related) ATC clearance being issued (e.g. an instruction to descend on ILS), pilots shall continue to maintain a previously allocated speed. All speed restrictions are to be flown as accurately as possible. ACFT unable to conform to these speeds should inform ATC and state what speeds can be used. In the interests of accurate spacing, pilots are requested to comply with speed adjustments as promptly as feasible within their own operational constraints, advising ATC if circumstances necessitate a change of speed for ACFT performance reasons.

2.2. NOISE ABATEMENT PROCEDURES

2.2.1. General

All ACFT inbound or outbound from this AD are required to conform to the following procedures; notwithstanding that these may at any time be departed from to the extent necessary for avoiding immediate danger.

Every operator of ACFT using the AD shall ensure at all times that ACFT are operated in a manner calculated to cause the least disturbance practicable in areas surrounding the AD.

Unless on radar vectors, ACFT shall avoid the congested areas of Hampton-in-Arden and Balsall Common to the Southeast of the AD and Dorridge, Knowle and Hockley Heath to the Southwest of the AD.

2.2.2. ILS Approaches

Unless otherwise instructed by ATC, ACFT using the ILS in IMC or VMC shall not descend below 2000' before intercepting the GS nor fly below the GS thereafter. An ACFT approaching without assistance from ILS or radar shall follow a descent path which will not result in its being at any time lower than the approach path which would be followed by an ACFT using the ILS GS.

2.2.3. Visual Circuits Approaches

2.2.3.1. Propeller driven ACFT MTWA 5700 kg or less

For ACFT in this category, the minimum altitude for joining the final approach track shall be 1330' for all approaches

2.2.3.2. All other ACFT

All ACFT carrying out visual circuits/approaches to RWYs 33 and 15 shall not, unless instructed by ATC, descend below 2510' on the downwind legs until they are abeam the AD, after which a continuous rate is to be maintained.

ACFT must not join the final approach track to any RWY at an altitude of less than 1830', except when carrying out a right hand visual circuit to RWY 33 when the minimum altitude for joining the final approach track will be 1230'.

2.2.4. Reverse Thrust

To minimise disturbance in areas adjacent to the AD, captains are requested to avoid the use of reverse thrust after landing, consistent with safe operation of the ACFT, especially between 2300-0700LT.

2. ARRIVAL

2.2.5. Continuous Descent Approach (CDA)

Turbo-jet and turbo-prop ACFT are expected to apply continuous descent, low power, low drag approach techniques at all times.

Subject to ATC instructions, inbound ACFT are to maintain as high an altitude as practical and adopt a low power, low drag, CDA profile. ATC will provide estimated track distance to touchdown to allow pilots to descend at a rate they judge best suited to achieve continuous descent without using more power or drag than necessary. The object will be to join the GP at the appropriate height for the distance without level flight.

To facilitate these techniques ACFT should be flown no faster than 250 KT from the SLP and below FL100 and 250 KT-210 KT during the intermediate approach phase. Thereafter speed should be managed so as to achieve a continuous descent using as little power or drag as possible. ATC may impose speed control if required for separation purposes.

CDAs will commence from 6000'. ATC will provide regular range checks. Pilots who require additional track mileage to facilitate a successful CDA should inform ATC as soon as the requirement is apparent.

2.3. CAT II/III OPERATIONS

RWYs 15 and 33 approved for CAT II/III operations, special aircrew & ACFT certification required.

2.4. RWY OPERATIONS

After landing on RWY 15 and vacating onto TWY C, no ACFT is to proceed beyond C2 without specific ATC instructions.

2.5. OTHER INFORMATION

2.5.1. General

WARNING: When landing on RWY 15 or 33, building induced turbulence and wind shear effects possible.

2.5.2. COMMUNICATION FAILURE DURING MISSED APCH

Landing direction 150°:

Climb AHEAD to 1000'. Turn RIGHT onto 169° to 2500' or D4.0 IBIR, whichever is later, then turn LEFT to BHX NDB.

Landing direction 330°:

Climb AHEAD to 2500' or D2.0 IBM, whichever is later, then procedure turn RIGHT to BHX NDB.

3. DEPARTURE

3.1. SPEED RESTRICTIONS

MAX 250 KT below FL100 unless cleared otherwise. ATC removes limitations by the phrase 'No ATC speed restriction'. This phrase must not be interpreted as relieving the pilot of his responsibility for the observance of any speed-power limitations due to noise abatement procedures.

3.2. NOISE ABATEMENT PROCEDURES

3.2.1. General

All ACFT inbound or outbound from this AD are required to conform to the following procedures; notwithstanding that these may at any time be departed from to the extent necessary for avoiding immediate danger.

Every operator of ACFT using the AD shall ensure at all times that ACFT are operated in a manner calculated to cause the least disturbance practicable in areas surrounding the AD.

3. DEPARTURE

Unless on radar vectors, ACFT shall avoid the congested areas of Hampton-in-Arden and Balsall Common to the Southeast of the AD and Dorridge, Knowle and Hockley Heath to the Southwest of the AD.

3.2.2. Take-off and Missed Approaches

Every jet ACFT using the AD shall, after take-off or 'go-around' attain as soon as safety permits, a rate of climb of at least 500' per minute at power settings which will ensure progressively decreasing noise levels at points under the flight path.

3.2.3. Noise Preferential Routings

The Noise Preferential Routeings given below are compatible with ATC requirements and shall apply in both VMC and IMC. The tracks are to be flown by all departing jet ACFT and by all other ACFT with a maximum certified weight not exceeding 5700 kg unless otherwise instructed by ATC or unless deviations are required in the interests of safety. The use of the route is supplementary to noise abatement take-off techniques.

After take-off, pilots should ensure that they are at a minimum altitude of 830' before initiating any turn. The obligations of Noise Preferential Routeings cease when an altitude of 3000' or above has been reached.

Take-off RWY 15:

Climb straight ahead to IBIR 1 DME or 830', whichever is later, then turn RIGHT, 170° track, then

- LEFT turn to a track of less than 060°: at IBIR 2 DME turn LEFT as instructed by ATC
- LEFT turn to a track of greater than 060°: at IBIR 4 DME turn LEFT as instructed by ATC
- RIGHT turn: at IBIR 4 DME turn RIGHT as instructed by ATC

Aerodrome DME out of service:

Climb straight ahead to HON 5 DME or 830', whichever is later, then turn RIGHT, 170° track, then

- LEFT turn to a track of less than 060°: at HON 4 DME turn LEFT as instructed by ATC
- LEFT turn to a track of greater than 060°: at HON 2 DME turn LEFT as instructed by ATC
- RIGHT turn: at HON 2 DME turn RIGHT as instructed by ATC

Take-off RWY 33:

Climb straight ahead to IBM 2 DME or 830', whichever is later, then

- either LEFT or RIGHT turn out: at IBM 2 DME turn as instructed by ATC

Aerodrome DME out of service:

Climb straight ahead to HON 9 DME or 830', whichever is later, then

- either LEFT or RIGHT turn out: at HON 9 DME turn as instructed by ATC

Directions of turn onto course shall be such that as far as possible the surrounding built-up areas will be avoided.

Speed Limit - Take-off RWY 15: for Trent and Whitegate SIDs, a speed limit no greater than 210 KT must be maintained until established on HON R-018. If ACFT are unable to comply please advise ATC for alternative instructions.

Except in emergency and for safety reasons no ACFT movements or activities involving the running of ACFT engines shall take place on or along the first 100m of RWY 15, TWY A or TWY B North of Hold A6 between 2300-0700LT, unless the ACFT landed at the APT before 2300LT and is proceeding to the aprons. Pilots should note that in such circumstances RWY 15 TORA/ASDA/TODA will be reduced by 150m.

WCO 5D	33	Climb to IBM 2 DME or 830', whichever is later, turn RIGHT, intercept DTY R-318 inbound by D26 DTY, at D20 DTY turn RIGHT, cross D18 DTY at or above 5000' (MAX 6000'), intercept 152° bearing, cross D16 DTY at 6000', then to WCO.
WCO 4E	15	Climb to IBIR 1 DME or 830', whichever is later, turn RIGHT, 169° track, to IBIR 4 DME, turn LEFT to HON, HON R-142, cross D7 HON at or above 4000' (MAX 6000'), D11 HON at or above 5000' (MAX 6000'), D16 HON at 6000', then to WCO.

BIRMINGHAM
Radar
118.05

Apt Elev
328'

- Trans level: By ATC Trans alt: 6000'
1. After passing 2000' contact BIRMINGHAM Radar as soon as possible.
 2. All SIDs include noise preferential routes.
 3. Cruising levels will be issued after take-off by SCOTTISH Control.
 4. Do not climb above SID level until cleared by ATC.

WHITEGATE 4D (WHI 4D)

WHITEGATE 4E (WHI 4E)

RWYS 33, 15 DEPARTURES

~~SPEED~~ MAX 250 KT BELOW FL100

UNLESS OTHERWISE AUTHORIZED

These SIDs require minimum climb gradients of

WHI 4D: 4.7% up to 6000' for ATC purposes.

WHI 4E: 4.4% up to 6000' for ATC purposes.

Gnd speed-KT	75	100	150	200	250	300
