Airport Information For EBCI

Terminal Charts For EBCI

Revision Letter For Cycle 15-2013

Change Notices

Notebook

General Information

Location: Charleroi Bel
IATA Code: CRL
Lat/Long: N50° 27.6' E004° 27.2'
Elevation: 614 ft

Airport Use: Public
Magnetic Variation: 0.4°E

Fuel Types: 100 Octane (LL), Jet A-1
Repair Types: Major Engine
Customs: Yes
Airport Type: IFR
Landing Fee: Yes
Control Tower: Yes
Jet Start Unit: Yes
LLWS Alert: No
Beacon: No
Pattern Altitude: 886 ft AGL

Sunrise: 0354 Z
Sunset: 1943 Z,

Runway Information

Runway: 07
Length x Width: 8366 ft x 148 ft
Surface Type: asphalt
TDZ-Elev: 612 ft
Lighting: Edge, ALS, Centerline
Displaced Threshold: 1476 ft

Runway: 25
Length x Width: 8366 ft x 148 ft
Surface Type: asphalt
TDZ-Elev: 589 ft
Lighting: Edge, ALS, Centerline, TDZ

Communication Information

Charleroi Approach Control 133.125
Charleroi Approach Control 119.7 Secondary
Charleroi Approach Control 37.087 Military

Charleroi Approach Control 25.78 Military

1. GENERAL

1.1. ATIS

D-ATIS 115.7 134.62

1.2. NOISE ABATEMENT PROCEDURES

ACFT operating at APT must be noise certificated according to ICAO Annex 16, Volume I.

The Airport Authority is entitled to require the ACFT operator to provide any related document or technical information concerning an operated ACFT, and to refuse take-off if these documents or information are not forwarded.

1.2.1. PREFERENTIAL RUNWAY SYSTEM (for aircraft of more than 5.7t)

When RWY 25 is dry and the cross and/or tail wind component does not exceed respectively 10 KT and 8 KT surface wind, RWY 25 will always be assigned for take-off and landing. When RWY 25 is wet, covered with snow or slush, the tail wind component is maximum 5 KT.

1.2.2. LOCAL FLYING RESTRICTIONS

Re-certificated civil subsonic jet aircraft are prohibited between 2200-0600.

Excluded from this prohibition are:

- Belgian or foreign royal flights, government flights and flights of Regional and Community governments, flights of Heads of State and flights carrying presidents and members of the European Union on official missions.
- Missions in case of disasters or for medical urgency.
- Military missions.
- Take-off or landing performed in exceptional conditions (flights on which an immediate threat exists to the health of people or animals, diverted flights, etc.)
- Delayed flights, provided the delay is due to circumstances beyond the operator's control.

Exceptionally and on explicit justified request, the Minister of Transport may authorize a take-off or landing of an ACFT that is banned for the reasons mentioned above.

Noise Quota System between 0530-0600 and 2100-2200

ACFT certified according to the standards of ICAO Annex 16, Chapter 2, 3, 4 or 5 are restricted to a maximum QC at 5 per movement.

1.2.3. RUN-UP TESTS

Outdoor engine test runs are prohibited between 2000-0800.

Engine tests are prohibited on stands 88 thru 94.

1.2.4. REVERSE THRUST

The reverse thrust should be kept to the minimum compatible with the safety of the ACFT. Use of reverse thrust is prohibited on the apron.

1. GENERAL

1.3. LOW VISIBILITY PROCEDURES (LVP)

1.3.1. GENERAL

Pilots will be informed via ATIS or ATC when LVP are in progress. ATIS message will contain the phrase "LOW VISIBILITY OPERATIONS IN PROGRESS" and will also provide details of any unavailability of equipment relevant to LVP. Pilots will be informed by ATC when LVP are terminated.

Preparation phase will start when VIS falls below 1500m and/or ceiling is MAX 300' and CAT II/III operations are expected.

Operations phase will start when RVR falls below 550 m and/or ceiling is below 200'.

LVP will be terminated when RVR or VIS exceeds 1000m and ceiling is MIM 200', and a continuing improvement in these conditions is expected.

When LVP are in operation, arriving ACFT will be vectored to intercept ILS at least 10 NM from touchdown.

Landing clearance will normally be given not later than 2 NM from touchdown.

During LVP movement on maneuvering area is limited to one ACFT or vehicle at a time. Back-track on the RWY is prohibited.

1.3.2. ROUTING

TWYs N2 to N to M4.

Take-off from RWY 25: TWY M6 to N to N5.

1.4 CAT II/III OPERATIONS

RWY 25 approved for CAT II/III operations, special aircrew and ACFT certification required.

1.5. TAXI PROCEDURES

Only two code C ACFT are allowed simultaneously on RWY and TWY S. When a code D ACFT performs a movement on RWY, no ACFT allowed on TWY S and vice versa.

TWY N between N1 and N3 MAX wingspan less than 118'/36m.

TWYs S2 and S3 MAX wingspan 118'/36m.

Taxilanes F, G and H are under ATS guidance only. Pilots are responsible for their own separation.

Except for towed ACFT, taxilanes F, G and H shall be used one-way only. 180° turns are forbidden.

Entry to aprons P11 thru P14 via TWY M5, exit via TWY M6.

CAUTION is advised as handling traffic will cross Taxilane F.

1.6. PARKING INFORMATION

Stands 88 thru 94 to be used by towing.

1.7. OTHER INFORMATION

180° turns of ACFT exceeding 20 tons MTOW permitted on RWY ends only.

Arresting gears can be removed with 30 min prior notice.

RWY 25 right-hand circuit for ACFT with MIM 5.7 tons.

It is prohibited to start ACFT engines outside the official opening hours of the APT. This restriction applies to all ACFT categories.

2. ARRIVAL

2.1. NOISE ABATEMENT PROCEDURES

Noise abatement descent and approach procedures utilizing continuous descent and reduced power/reduced drag techniques should be used by all ACFT when operating conditions are as follows:

- ILS available
- RWY is clear and dry
- visibility higher than 1900m
- ceiling higher than 1120'
- cross wind component (including gusts) lower than 15 KT
- tail wind component (including gusts) lower than 5 KT
- no adverse weather conditions that may affect the approach (such as reported or forecasted wind shears or thunderstorms)

Turbo-jet powered aircraft shall use as final flap setting the minimum certified setting published in the aircraft operating manual for the applicable conditions. However, each pilot-in-command may use a different flap setting approved for the aircraft if he determines that it is necessary in the interest of safety.

3. DEPARTURE

3.1. NOISE ABATEMENT PROCEDURES

Departures shall be performed as follows:

Take-off to 2100'	Take-off power
	Take-off flaps
	Climb at $V_2 + 10$ KT
At 2100'	Maintain flaps in take-off configuration
	Climb at $V_2 + 10 - 20$ KT
	Adjust power according noise abatement power schedule provided in the ACFT Operating Manual
2100' - 3600'	Start accelerating
	Start retracting flaps
	Maintain a positive rate of climb
At 3600'	Accelerate to enroute climb speed
