Notebook

General Information

Location: Hannover Deu
IATA Code: HAJ
Lat/Long: N52° 27.6' E009° 41.0'
Elevation: 183 ft

Airport Use: Public
Magnetic Variation: 2.0°E

Fuel Types: 100 Octane (LL), Jet A-1
Repair Types: Major Airframe, Major Engine
Customs: Yes
Airport Type: IFR
Landing Fee: Yes
Control Tower: Yes
Jet Start Unit: No
LLWS Alert: No
Beacon: Yes

Sunrise: 0324 Z
Sunset: 1931 Z,

Runway Information

Runway: 09C
Length x Width: 2559 ft x 74 ft
Surface Type: asphalt
TDZ-Elev: 178 ft
Displaced Threshold: 197 ft
Stopway: 558 ft

Runway: 09L
Length x Width: 12467 ft x 148 ft
Surface Type: concrete
TDZ-Elev: 169 ft
Lighting: Edge, ALS, Centerline, REIL, TDZ
Displaced Threshold: 984 ft

Runway: 09R
Length x Width: 7677 ft x 148 ft
Surface Type: concrete
TDZ-Elev: 172 ft
Lighting: Edge, ALS, Centerline, REIL

Runway: 27C
Length x Width: 2559 ft x 74 ft
Surface Type: asphalt
TDZ-Elev: 174 ft
Displaced Threshold: 525 ft

Stopway: 197 ft

Runway: 27L

Length x Width: 7677 ft x 148 ft

Surface Type: concrete

TDZ-Elev: 179 ft

Lighting: Edge, ALS, Centerline, REIL

Runway: 27R

Length x Width: 12467 ft x 148 ft

Surface Type: concrete

TDZ-Elev: 169 ft

Lighting: Edge, ALS, Centerline, REIL, TDZ

Displaced Threshold: 984 ft

1. GENERAL

1.1. ATIS

*D-ATIS 136.57

1.2. NOISE ABATEMENT PROCEDURES**1.2.1. NIGHT FLYING RESTRICTIONS**

Between 2200-0559LT, aircraft exceeding the noise limits pursuant to ICAO Annex 16, Volume 1, Chapter 3 are not permitted to operate.

If any ACFT are to take-off or land between 2300-0559LT, a copy of the noise certificates shall be submitted in advance.

Between 2300-0559LT, only the following ACFT movements and ACFT are permitted:

1. Take-offs and landings of turbo-jet ACFT with noise certificate in accordance ICAO with Annex 16, Chapter 3 or 4 which are more than 8 EPNdB below the limits laid down in ICAO Annex 16, Volume 1, Chapter 3, and
 - a) which are usually scheduled for the APT of Hannover, or
 - b) which are used for night airmail service of a universal service provider as defined in the Postal Universal Service Ordinance (PUDLV) if the night flight is required to meet the quality standard in accordance with Article 2, item 3 of the PUDLV (service provider shall prove this in advance to the airport), or
 - c) which are operated by air carriers whose main base and maintenance facilities are in Hannover.

2. Take-offs and landings of turbo-jet cargo ACFT with noise certificate in accordance ICAO with Annex 16, Chapter 3 or 4, and
 - a) which are more than 8 EPNdB below the limits laid down in ICAO Annex 16, Volume 1, Chapter 3, or
 - b) all jet ACFT up to 25000 KGS MTOW which are more than 5 EPNdB below the limits laid down in ICAO Annex 16, Volume 1, Chapter 3, as well as the following ACFT types:

A300	CANADAIR RJ
A310	DASH 8-400
A319	FOKKER 70/100
A320	GULFSTREAM IV/V
A321	LOCKHEED L1011 - take-off only
A330	DC 8-70 - series
A340	DC 10 - take-off only
BAe 146/AVRO RJ-series	DC 10-30 (all versions) - landing only
B717	MD 11
B727-100 re-engined with 3 tay engines	MD 80 (all versions) - landing only
B737-300/400/500/600/700/800	MD 90
B747-400	TUPOLEV 204
B757	
B767	
B777	

3. Landings of ACFT not exceeding the limits pursuant to ICAO Annex 16, Volume 1, Chapter 3, operated by air carriers whose main base and maintenance facilities are in Hannover.
4. Take-offs and landings of ACFT with different means of propulsion in commercial and corporate air traffic complying with the provisions of ICAO Annex 16, Volume 1, Chapters 3, 4, 5, 6, (-4 dBA), 8, 10 (-3 to -8 dBA) or 11 and/or Chapters III, IV 2.4, VII or X 2.4 of Noise Requirements for ACFT as well as landings of ACFT with different means of propulsion and noise certificate stationed at Hannover Airport in business air traffic.
5. Landings of delayed ACFT which are part of scheduled air services or regular air inclusive tours, which do not exceed the noise limits pursuant to ICAO Annex 16, Volume 1, Chapter 3 and which are scheduled to arrive at Hannover prior to 2300LT.
6. Landings of ACFT provably using the airport as alternate aerodrome for meteorological, technical or other safety reasons.

1. GENERAL

7. Calibration flights conducted by DFS Deutsche Flugsicherung GmbH as far as necessary for maintaining flight safety.
8. Take-offs and landings in emergency cases.
9. Take-offs and landings in exceptional cases with special permission from the aviation supervision office of the "Niedersaechsisches Ministerium fuer Wirtschaft, Arbeit und Verkehr".

Subject to further restrictions of this provision, between 2200-0559LT take-offs and landings by ACFT as listed below are only permitted on the northern RWYs 09L/27R.

Exceptions for urgent technical, meteorological or operational reasons are possible.

A300	LOCKHEED L1011
A310	DC 8-70-series
A330	DC 10
A340	MD 11
B727-100 re-engined with 3 tay engines	MD 80-series
B737-200	MD 90
B747-400	TUPOLEV 154
B757-300	TUPOLEV 204
B767	
B777	
and	

propeller-driven ACFT with more than 5.7t MTOW.

1.2.2. LOCAL FLYING RESTRICTIONS

1. Arrivals and departures immediately following one another as well as circling flights for ACFT **over 5.7t MTOW** and for ACFT **up to 5.7t MTOW not complying** with the conditions of ICAO Annex 16, Volume I, Chapter 3, 4, 5, 6 (-4 dB [A]), 8, 10 (-3 to -8 dB [A]) or 11 pursuant to ICAO and/or LSL Chapters III, V, VI 2.4, VIII or X 2.4:
Only permitted MON-FRI between 0600-2059LT and SAT between 0800-1259LT.
2. Arrivals and departures immediately following one another as well as circling flights for ACFT **up to 5.7t MTOW complying** with the conditions of ICAO Annex 16, Volume I, Chapter 3, 4, 5, 6 (-4 dB [A]), 8, 10 (-3 to -8 dB [A]) or 11 pursuant to ICAO and/or LSL Chapters III, V, VI 2.4, VIII or X 2.4:
Only permitted MON-SAT between 0600-2059LT and SUN, HOL between 0800-2059LT.
3. Arrivals and departures immediately following one another, not represented at the APT by an ACFT operator, are subject to permission by the "Luftaufsicht" at Hannover APT.

1.2.3. RUN-UP TESTS

Run-up tests of jet engines shall be conducted exclusively in a noise suppression facility which is ready for operation.

If the noise suppression facility is not ready for operation, run-up tests of jet engines may be conducted only from 0600-2200LT. Between 2200-2400LT as well as between 0400-0600LT run-up tests of jet engines may, however, also be conducted outside the noise suppression facility which is not ready for operation if required for urgent maintenance due to safety reasons shortly before a take-off after landing. This provision does not apply to idle test runs.

1.3. LOW VISIBILITY PROCEDURES

ACFT will be guided onto RWY by Follow-me car.

Enquiries via HANNOVER Ground.

1. GENERAL

1.4. AUXILIARY POWER UNIT (APU)

To avoid additional noise and reduce further immissions, utilization of the APU shall be reduced to a minimum. This is the responsibility of the pilot.

The APU shall be operated only:

- to start the engines; 15 minutes prior to EOBT at the earliest
- for necessary maintenance work on the ACFT
- if the stationary or mobile ground equipment of the APT is not available or suitable for certain ACFT types.

In special cases, extended hours of operation for the APU may be granted by the APT duty officer (Tel : +49 511 977 1455).

1.5. TAXI PROCEDURES

When taxiing, ACFT shall maintain constant radio contact with control tower. Any requested frequency changes shall be made immediately.

To increase safety of RWYs RWY guard lights have been installed on both sides of CAT I holding positions of RWYs 09L/27R and 09R/27L, as well as of holding positions of RWY 09C/27C.

On aprons ACFT are permitted to taxi only at the indispensable minimums engine speed.

TWYs on the apron are ACFT stand taxilanes with reduced minimum separation distances between taxilane centerlines and stationary objects. The separation distances between taxilane centerline and the red obstacle limitation lines are:

- 156'/47.5m in the area of the parallel TWY between positions 4A thru 27 and 42 thru 61.
- 136'/41.5m in the area between positions 23 thru 42.
- 125'/38m in the area of positions 1 and 2.
- 85'/26m in the area of positions 12, 13 and 20.

The width of the taxilane in the area between positions 45 thru 60 is 279'/85m.

TWY P MAX wingspan 56 '/17m.

TWY O MAX wingspan 66 '/20m.

TWY Q MAX wingspan 118'/36m.

While taxiing to and from RWY 09L/27R pilots will need crossing-clearance for RWY 09C/27C, which is an active VFR daytime RWY. To avoid RWY incursions pilots are referred to the published hot spots on 10-9 page.

1.6. PARKING INFORMATION

1.6.1. GENERAL

On stands 1 thru 27 and 40 thru 61, except R-stands push-back required.

Stands 1 thru 20, except A-stands equipped with visual docking guidance system.
For stand graphic refer to 10-9 charts.

1.6.2. GENERAL AVIATION 1

All ACFT will be guided by Follow-me.

MAX wingspan 66 '/20m btn hangar 11, 12 and posn 72-75.

MAX wingspan 56 '/17m in front of hangar 13.

MAX wingspan 52 '/16m on other parts of apron.

1.6.3. GENERAL AVIATION 2

MAX wingspan 49 '/15m.

1.6.4. GENERAL AVIATION 3

MAX wingspan 118'/36m; ACFT with wingspan over 95'/29m will be towed.

2. ARRIVAL

2.1. SPEED RESTRICTIONS

MAX 250 KT below FL 100 or as by ATC. Not applicable within airspace C.

2.2. NOISE ABATEMENT PROCEDURES

2.2.1. REVERSE THRUST

Between 2100-0600LT reverse thrust, other than idle thrust, shall only be used to an extent necessary for safety reasons.

2.3. CAT II/III OPERATIONS

RWY 09L/27R approved for CAT II/III operations, special aircrew and ACFT certification required.

2.4. OTHER INFORMATION

2.4.1. FUEL SAVING AND NOISE REDUCING ILS APPROACH

PROCEDURES (CONTINUOUS DESCENT APPROACH - CDA)

2.4.1.1. GENERAL

For the purpose of fuel-saving and noise abatement during approach the following approach procedure is announced. It may be requested by the pilot or offered by the controller. It can be conducted only in connection with an ILS approach.

2.4.1.2. PROCEDURE

ACFT will be guided by the approach control unit by means of radar vectoring and will be cleared for a continuous descent to the intermediate approach altitude in such a way that after reaching this intermediate approach altitude on the localizer course, about 1 NM will be left for intercepting the glide path in level flight. This intermediate approach segment will serve to reduce speed.

Intermediate approach altitude: 2000'. It is assumed that the continuous descent will be performed at a rate of 300 ft/NM (descent angle approx 3°), down to the cleared altitude.

If, for specific reasons (e.g. separation, airspace structure, obstacles), altitudes above the intermediate approach altitude have to be initially assigned, these restrictions will be lifted early enough to allow a continuous descent at a rate of 300 ft/NM.

Details about the distance from touchdown will be transmitted to the pilot together with the clearance for descent and usually at 20, 15 and 10 NM from touchdown. This should enable the pilot to correct the rate of descent as required.

In case of traffic situations allowing no CDA (e.g. approaches of aircraft with different performance data), pilots will be informed by the notice NO CDA POSSIBLE. In this case, approaches must be conducted according to the previous procedures.

2.4.1.3. NOISE ABATEMENT

On approaches in accordance with the CDA, pilots are also expected to use the approach techniques recommended for noise abatement in the vicinity of APTs (see AIR TRAFFIC CONTROL page GERMANY-1).

3. DEPARTURE

3.1. DE-ICING

3.1.1. GENERAL

The de-icing of ACFT will take place on defined de-icing areas (DPs), exclusively. These areas are located at the Western part of the apron.

De-icing on other parking positions - with the exception of the regulation described below - is not permitted.

3.1.2. De-icing Areas

The special areas assigned for the de-icing of ACFT are designated DP1 and DP2 (see 10-9B). In exceptional cases, de-icing may take place on the positions located in between. The actual de-icing position will be assigned by the de-icing operator. The de-icing of jet-propelled ACFT will be carried out with running engines and switched off auxiliary power units (APU). The same regulation applies for ACFT types ATR 42/72 with applied propeller brakes.

3.1.3. De-icing

A de-icing operation shall be reported to the de-icing operator in good time (30min in advance prior to OFB/CTOT) under the phone number (0511)-9771415 however, when obtaining start-up clearance for the engines on frequency **121.95**, at the least.

The order of notifications has no influence on the actual de-icing sequence. This will be determined by ground control, exclusively.

After start-up clearance/push-back, ACFT will be guided by ground control to the immediate vicinity of the de-icing areas. The ACFT will then be guided by a Follow-me car to a vacant de-icing position.

After parking the ACFT on the de-icing area, the pilot will report on HANNOVER De-icing **135.22** together with his flight number. After the de-icing process has been completed, the pilot in command shall report "ready to taxi" to HANNOVER Ground. If the engines have to be started up again, this shall be reported to ground control. During the de-icing process, the pilot shall maintain constant listening watch on the respective de-icing frequency. When the de-icing procedure has been completed, the de-icing code will be transmitted and the ACFT handed over by the de-icing operator to the ground controller.

Taxiing manoeuvres from the de-icing areas may only be carried out after express clearance by the ground controller and with the absolute minimum number of engine revolutions required, only.

After de-icing has taken place, the de-icing areas shall be vacated as quickly as possible after receiving taxi clearance.

Pre de-icing measures with water can be conducted on parking positions if notified in good time. This pre de-icing serves merely to guarantee safe taxiing to the de-icing pads. All other special services, such as the de-icing of the undercarriage or de-icing beneath the wings, will be conducted on the pads with engines switched off, only.

The Hands-on check will generally only be carried out by representatives of the air transport company concerned or by a crew member of the de-iced ACFT on the respective de-icing pad. A Hands-on check shall be requested by the crew through a handling agent, only. On instructions from the de-icing operator, an ACFT may be towed to another position for the hands-on check or planned for another de-icing position in the pre-planning stage already. If a hands-on check becomes necessary, the control tower shall be informed in time, but at the latest when requesting start-up clearance. The employees of FHG and AGS (de-icing personnel) will not carry out these checks.

3.2. TAXI PROCEDURES

ACFT may leave nose-in positions only by the aid of towing cars.

Reverse thrust or variable pitch propellers shall not be used.

Leaving positions 1 thru 23B, 27 and 40 thru 61 (except R stands) ACFT have to be pushed back.

3. DEPARTURE

3.3. NOISE ABATEMENT PROCEDURES

For additional depiction refer to 10-4.

The starting points for the take-off runs of 3200m in length are located at the level of the eastern edge of RWY N for landing direction 27 and at the level of the western edge of RWY H for landing direction 09. The starting points located 300m in front of THR 09L for take-offs in an eastern direction and 300m in front of THR 27R for take-offs in a western direction may only be used by ACFT requiring a take-off run exceeding 3200m for the forthcoming take-off

3.4. OTHER INFORMATION

3.4.1. DATALINK DEPARTURE CLEARANCE (DCL)

DFS (Deutsche Flugsicherung GmbH) is offering start-up and enroute clearances using Datalink. The procedures have been described in an AIC.

Temporal parameters:

- t_i 25 min prior to EOBT for unregulated flights.
30 min prior to CTOT for ATFM regulated flights.
- $t_{\uparrow}$ 11 min prior to EOBT for unregulated flights.
16 min prior to CTOT for ATFM regulated flights.
- t_1 5 min

Trans level: By ATC Trans alt: 5000'

The MRVA (Minimum Radar Vectoring Altitude) is the lowest altitude which may be used for radar vectors for IFR flights taking into account the minimum safe height (1000' above the highest obstacle within a radius of 8 km) and airspace structure (lower limit of the controlled airspace plus a buffer of 500'). Below the MRVA, IFR flights will normally be cleared on published IFR procedures only. Altitudes in brackets apply between AIRAC date NOV and AIRAC date MAR in order to meet required obstacle clearance at cold temperatures.

ADVANCED VISUAL DOCKING GUIDANCE SYSTEM (A-VDGS)

WARNING: Do not start docking procedure unless one of the routine docking process displays are shown or if a pilot is unsure about the indicated information.

1. START OF DOCKING

The floating arrows indicate that the system is activated and in capture mode, searching for an approaching aircraft. It shall be checked, that the correct aircraft type is displayed. The lead-in line shall be followed. **THE PILOT MUST NOT PROCEED BEYOND THE BRIDGE, UNLESS THE ARROWS HAVE BEEN SUSPENDED BY THE CLOSING RATE BAR.**

**2. TRACKING**

When the aircraft has been caught by the laser, the floating arrow is replaced by the yellow center line indicator. A flashing red arrow indicates the direction to turn.

The vertical yellow arrow shows position in relation to center line. This indicator gives correct position and azimuth guidance.

**3. CLOSING RATE**

The closing rate is the final countdown from 30m distance to the stop position.

A yellow vertical closing rate bar / center line indicator appears with the digital countdown.

**4. SLOW (DECREASE SPEED)**

If the aircraft is approaching faster than the accepted speed, the system will show SLOW as a warning to the pilots.

**5. STOP POSITION REACHED**

When the correct stop position is reached, the display will show STOP with red lights.

**6. DOCKING COMPLETED**

When the aircraft has parked, OK will be displayed.

**7. ON BLOCK TIME**

On block time will be displayed in UTC-time.

**8. CHOCK ON**

CHOCK ON will be displayed, when the ground staff has put the chocks in front of and behind the main gear wheels and pressed the "Chocks on" button on the operator panel. It disappears after 180 seconds.

**DISPLAYED FORMS AT ABNORMAL CONDITIONS**

Form:

Acft type

Display black with red lights

Display complete black

ERROR

ERR10

WAIT

WAIT followed by GATE BLOCK

STOP

STOP followed by ID FAIL

STOP followed by TOO FAST

STOP followed by SBU

STOP followed by OK

STOP / ABORT

TOO FAR

Indication for:

(preselected)

System breakdown - stop

Power failure - stop

System error

System error (communication error with system)

Not allowed object within scanning range - stop

Not allowed object within scanning range when system starts - stand not usable

Emergency stop

Identification failed - stop

Docking system must be restarted or the docking procedure completed by manual guidance

Too far of center line within last 10' / 3m to stop position

Not correct stop position is reached but within limits

Docking is interrupted by gate operator

Acft has overshoot the stop position (more than 1m)
