Airport Information For EKCH

Terminal Charts For EKCH

Revision Letter For Cycle 15-2013

Change Notices

Notebook

General Information

Location: Copenhagen Dnk
IATA Code: CPH
Lat/Long: N55° 37.1' E012° 39.4'
Elevation: 17 ft

Airport Use: Public
Magnetic Variation: 3.0°E

Fuel Types: Jet A-1
Repair Types: Major Airframe, Major Engine
Customs: Yes
Airport Type: IFR
Landing Fee: No
Control Tower: Yes
Jet Start Unit: No
LLWS Alert: No
Beacon: No

Sunrise: 0255 Z
Sunset: 1936 Z,

Runway Information

Runway: 04L
Length x Width: 9843 ft x 148 ft
Surface Type: asphalt
TDZ-Elev: 13 ft
Lighting: Edge, ALS, Centerline, TDZ
Stopway: 1870 ft

Runway: 04R
Length x Width: 10827 ft x 148 ft
Surface Type: asphalt
TDZ-Elev: 12 ft
Lighting: Edge, ALS, Centerline

Runway: 12
Length x Width: 7759 ft x 148 ft
Surface Type: concrete
TDZ-Elev: 13 ft
Lighting: Edge, ALS, REIL

Runway: 22L
Length x Width: 10827 ft x 148 ft
Surface Type: asphalt
TDZ-Elev: 8 ft
Lighting: Edge, ALS, Centerline, TDZ

Runway: 22R
Length x Width: 9843 ft x 148 ft
Surface Type: asphalt
TDZ-Elev: 14 ft
Lighting: Edge, ALS, Centerline, REIL

Runway: 30
Length x Width: 7759 ft x 148 ft
Surface Type: concrete
TDZ-Elev: 8 ft
Lighting: Edge, ALS
Displaced Threshold: 886 ft
Stopway: 984 ft

1. GENERAL

1.1. ATIS

D-ATIS Arrival 122.75
D-ATIS Departure 122.85

1.2. NOISE ABATEMENT PROCEDURES**1.2.1. GENERAL**

Propeller ACFT as well as turboprop ACFT with take-off weight of 11000 KGS or more and all jet ACFT should avoid overflying Greater Copenhagen (within KAS 15 DME) below 2500' (jet) or 1500' (prop). In case of special meteorological conditions (e.g. CB's significant wind variations) in the approach and take-off sectors, the ATC can at its discretion or on request from the Pilot-in-Command deviate from the restrictions stated below.

1.2.2. PREFERENTIAL RUNWAY SYSTEM**1.2.2.1. RUNWAY RESTRICTIONS (BETWEEN 0600-2300LT)**

Propeller & turboprop ACFT with take-off weight of 11000 KGS or more and all jets: RWYs 04L/R and 22L/R are the preferential RWYs and shall be used for take-off and landing to the greatest possible extent.

When RWY 04L/R is in use, RWY 04R shall be used for take-off and RWY 04L for landing unless one of the RWYs can not be used due to snow clearance, disabled ACFT, work on the RWY or RWY conditions. However, ATC can make use of parallel operations when regard of capacity makes it necessary.

Depending on the time of operation, certain types of ACFT are due to their noise characteristics only allowed to take-off from RWY 04R and land on RWY 04L.

When RWY 22L/R is in use between 0700-2200LT, RWY 22R shall be used for take-off and RWY 22L for landing unless one of the RWYs can not be used due to snow clearance, disabled ACFT, work on the RWY or RWY conditions. However, ATC can make use of parallel operations when regard of capacity makes it necessary.

Depending on the time of operation, certain types of ACFT are due to their noise characteristics only allowed to take-off from RWY 22R and land on RWY 22L.

When RWY 22L/R is in use between 2200-2300LT and 0600-0700LT, RWY 22L shall be used for take-off and landing.

RWY 22R may, however, be used between 2200-2300LT and 0600-0700LT when:

- RWY 22L is used for ILS CAT II & III approaches;
- RWY 22L can not be used for take-off due to snow clearance, disabled ACFT, work on the RWY or RWY conditions;
- an extraordinary traffic situation causes delays of more than 1 hour;
- regard of capacity makes it necessary to use parallel operations on RWY 22L/R.

Certain types of ACFT are, due to their noise characteristics, only allowed to use RWY 22L.

RWYs 12 & 30 may be used when:

- the crosswind component on the preferential RWYs exceeds 15 KT.
- the friction coefficient is below 0.3 on any part of the preferential RWYs.
- the meteorological conditions are below minima for landing on the preferential RWYs.
- the preferential RWYs can not be used due to snow clearance, disabled ACFT, work on the RWYs or TWYs or due to RWY conditions.

When wind conditions permit so, RWY 12 shall be used for take-off in preference to RWY 30.

RWY 30 may, however, be used for landing without restrictions.

If a preferential RWY is RWY in use irrespective that the crosswind component exceeds 15 KT, a request to use RWY 12 or RWY 30 will be complied with.

If a preferential RWY is not RWY in use due to the crosswind component exceeding 15 KT, a request to use a preferential RWY will be complied with if the handling of the other traffic so permits.

A request for permission to deviate from a clearance will be complied with if the Pilot-in-Command claims safety reasons.

1. GENERAL

1.2.2.2. RUNWAY RESTRICTIONS (BETWEEN 2300-0600LT)

Propeller & turboprop ACFT with take-off weight of 11000 KGS or more and all jets:
When RWY 22L/R is in use, RWY 22L shall be used for take-off and landing.

RWY 22R may, however, be used when:

- RWY 22L is used for CAT II & III approaches.
- RWY 22L can not be used for take-off due to snow clearance, disabled ACFT, work on the RWY or RWY conditions.
- an extraordinary traffic situation causes delays of more than 1 hour.

All ACFT:

RWYs 12 and 30 are closed for take-off and landing.

RWY 30 may, however, be used for landings when:

- the crosswind component on the preferential RWYs exceeds 15 KT;
- the preferential RWYs can not be used due to snow clearance, disabled ACFT, work on the RWYs etc.

Furthermore RWYs 12 and 30 may, however, be used in the following cases:

- for take-off and landing by vital flights such as ambulance and transplantation flights if the preferential RWYs are not available.
- for alternate landings, when the preferential RWYs are no longer available after the flight has commenced and the use of any other alternate APT is not possible.
- for landing in such cases where the aeroplane during flight has experienced reduced airworthiness and the Pilot-in-Command judges it necessary to land;
- for landings when the Pilot-in-Command declares an emergency situation.

The Pilot-in-Command shall as soon as possible submit a written report to the Civil Aviation Administration stating the reasons for using RWY 12/30.

The Civil Aviation Administration will make further investigation based on the reports from the Pilot-in-Command and the ATC.

1.2.3. NIGHTTIME RESTRICTIONS

All ACFT:

- Between 2300-0600LT take-off and landings shall be arranged in such a way that the maximum A-weighted sound pressure level does not exceed 85 dB (80 dB from Jan 1st 2005) in six Noise monitoring point positions (1, 5, 6, 7, 8, 9) in the surrounding residential areas.

Exempted are:

- delayed flights with scheduled take-off or landing before 2300LT.
- early arriving flights with scheduled landing after 0600LT.

Violations of the maximum A-weighted sound pressure level will be accepted if caused by:

- flight safety conditions.
- RWY utilization due to work on the RWY, CAT II and III landings and other special weather conditions.
- meteorological conditions which according to an evaluation by the Civil Aviation Administration has influenced the sound transmission.
- Take-off requires an advance approval of the Københavns Lufthavne A/S (Copenhagen APTs) between 2300-0600LT. An advance approval may be obtained for a period of about six months if the ACFT used is noise certificated in accordance with ICAO Annex 16, Chapters 2, 3 or 5, or if the applicant has demonstrated that the take-off can be carried out in such a way that the demands stated above are complied with.

If no advance approval exists take-off may take place (for jets or ACFT with take-off weight of 11000 KGS or more only as an exception) if the operator obtains a permit by the APT Office either based on documentation stating that the ACFT is noise certificated or based on the knowledge of the Københavns Lufthavne A/S (Copenhagen APTs) that corresponding ACFT have the ability to comply with demands stated above.

- Between 2300-0100LT no advance approval is required if the take-off takes place in the said interval as a result of delay.
- For landing no advance approval is required.
- Visual approach will not be permitted between 2200-0700LT if single RWY operations are in use, i.e. take-offs and landings on same RWY.

1. GENERAL

1.3. USE OF MODE S TRANSPONDER

ACFT are asked to ensure that the transponders are able to operate according to ICAO specifications when the ACFT is on the ground.

Flight crew are requested to select the assigned mode A (squawk) code and activate the mode S transponder:

- from commencement of push-back or taxi, whichever comes first;
- after landing, until ACFT is fully parked on stand. After parking, mode A code 2000 must be set before selecting OFF or STDBY.

Flight crew of ACFT equipped with a mode S transponder that has an ACFT identification feature should also select the ACFT identification (item 7 of ICAO flight plan) before activating transponder.

Flight crews of ACFT not equipped with a mode S transponder must squawk assigned SSR-code only when instructed to line up on the RWY. Upon vacating RWY after landing, flight crews on these ACFT shall switch off the transponder. At departure, flight crews of ACFT not equipped with a mode S transponder are requested to state "No mode S transponder" to KASTRUP Apron at first contact.

1.4. TAXI PROCEDURES

ACFT must not perform powered U-turns on TWYs in the apron areas.

In the apron areas minimum engine power shall be used as far as possible, and use of reverse thrust for manoeuvring to and from stands is not permitted.

Towing is mandatory when moving jet ACFT between the northern part of the APT and Area South.

Only when taxiing to or from RWY in use code B and C jet ACFT are allowed to taxi under own power on TWYs N1, N2 and on southern end of TWY C. TWY N2 is to be used by towing only for ACFT larger than code C.

Taxiing on TWY W is limited to MAX 10 KT for ACFT code E.

For all ACFT taxiing to/from stands R1A, R1B, R2A, R2B, R3A, R3B, W1A, W1B, W1C, W1D, E60, A50, G15, G16, G17, G18 and G19 as well as S1/S2 (in area South), marshaller assistance is compulsory within the entire movement area of the aerodrome.

When compulsory for the above reason or for the particular ACFT type or ACFT stand in question, the pilot will be advised by the ATS-unit.

ACFT movements must never coincide on adjacent ACFT stands with overlapping safety lines. ACFT must not simultaneously taxi into and/or taxi out/push-back from any two adjacent stands.

Taxi-out or push-back from ACFT stands must not be executed without approval from KASTRUP Apron or Tower.

Crossing of activated stopbars is prohibited. Traffic may proceed only after ATC clearance and when the stopbar light is switched off.

If the stopbar is out of service contingency measures are in force:

- Alternative taxi route where the stopbar is working will be used first of all.
- If no alternative taxi route is available a follow-me will be used, with RTF-confirmation to cross the stopbar with the information stopbar is out of service.
- If no follow-me is available, the RTF-confirmation to cross the stopbar with the information stopbar is out of service.

For Taxi Routings refer to 10-9 charts.

1.4.1. APRON NORTH

At stands F90 thru F98 daily 2300-0600LT (F27: 2200-0700LT): Main engines are not to be used.

At 2200-0700LT jet ACFT operations under own power are not allowed.

ACFT on parking area E60 engines must be used only up to 2 min prior to departure.

1. GENERAL

1.4.2. APRON WEST

Refuelling on stands RI, RII and RIII is prohibited.

1.4.3. TAXI LIMITATIONS FOR JET ACFT

Insufficient safety clearance may prevent large ACFT from using certain TWYs. Taxi routings given by KASTRUP Tower/KASTRUP Apron must be strictly adhered to.

1.5. PARKING INFORMATION

1.5.1. GENERAL

ACFT entering a stand must not proceed unless:

- The Docking Guidance System is operational and ready, displaying the correct ACFT type, or
 - A marshaller is present, providing guidance for the ACFT onto the stand.
- The marshaller is easily recognizable by wearing bright red hi-vis clothing and yellow/orange bats. The marshaller also drives the Follow-me car.
- During the stand-entry and parking phase the pilot should ignore hand signaling by any other ground staff present at the stand or in the loading bridge.

Stands G110 and G111 available for helicopters.

1.5.2. DOCKING GUIDANCE SYSTEM

Some stands are equipped with AGNIS and PAPA. Exceptions are listed below:

APIS:	Stands A4, A6 thru A9, A11, A12, A14 thru A18, B2 thru B7, B9, B10, B15 thru B17, B19, C10, C27, C28, C29, C33 thru C40, D4, F1, F4, F5 and F7 thru F9.
SAFEDOCK:	Stands A19 thru A23, C26, C30, C32, D1 thru D3, H102 and H105.
Centerline with yellow stop marking:	Stands A25 thru A28, A50, E76 thru E78, F89 thru F98, G110 thru G114, G120 thru G137, H101, H103, H104, H106, H107 and W1.
Marshaller compulsory:	Stands E60, G15 thru G19, RI, RII and RIII.

1.5.3. USE OF AUXILIARY POWER UNIT (APU)

Start-up of APU during refuelling is allowed only if the aircraft's APU unit is located outside the Fuelling Zones.

APU may be used:

- 5 minutes after "On Block".
- 5 minutes before estimated "Off Block" time.

Exemptions:

When the outside air temperature (OAT) is below -10°C or above +25°C or if the airport supply of power/air conditioning is unserviceable, the following conditions apply:

Information about outside temperature and state of airport power and air conditioning equipment must be obtained from Airside Operations FREQ 131.400 MHZ.

For aircraft types A300, A310, A330, A340, B747, B767, B777, DC10, MD11 and L1011, APU may be used:

- 10 minutes after "On Block";
- 45 minutes before estimated "Off Block" time.

For other aircraft types, APU may be used:

- 5 minutes after "On Block";
- 15 minutes before estimated "Off Block" time.

1.6. OTHER INFORMATION

Ships up to 115' may obstruct. ACFT will be informed about ships with height of more than 115' before take-off on RWYs 04R and 12.

2. ARRIVAL

2.1. NOISE ABATEMENT PROCEDURES

2.1.1. LANDING RESTRICTIONS

Propeller & turboprop ACFT with take-off weight of 11000 KGS or more and all jets:
- RWY 04L/R: Visual approaches must be performed within the sector shown on chart 10-4.
Visual approaches crossing the sector boundaries will be investigated by the authorities.

2.1.2. REVERSE THRUST

Use of more than idle reverse thrust is allowed only for safety reasons.
With respect to propeller & turboprop ACFT idle reverse refers to propeller in beta range and engine at idle power.

2.2. CAT II/III OPERATIONS

RWY 04L approved for CAT II operations, RWY 22L approved for CAT II/III operations; special aircrew and ACFT certification required.

Pilots who intend to carry out a CAT II/III ILS approach are to use the following phrase:

"Request Category II (or III) ILS approach RWY ... (mention RWY number)".

Above mentioned request shall be made to either MALMO Control or to COPENHAGEN Control and confirmed on first contact with COPENHAGEN Approach.
Vacated RWY reports must not be given before established on:

- TWY A when landing RWY 04L
- TWY B when landing RWY 22L

During CAT III vacate via TWY B1, B3 or B4 only.

2.3. TAXI PROCEDURES

Multi-engine propeller ACFT shall enter stand with one engine operating only.

Code D and E ACFT must enter stand B10 via TWYs Z and M.

Taxiing onto stands B10, B15 and B17 is with Follow-me car while crossing the service road.

Between 2200-0500LT ACFT bound for stands A30 thru A34 must be towed onto the stand.

Arriving ACFT must stop at the NIGHT STOP position on TWY V.

For Taxi Routings refer to 10-9 charts.

KASTRUP Tower will give permission to cross RWY 12/30. Depending on parking stand KASTRUP Tower will allocate traffic to the western or eastern part of APT.

2.4. LOST COMMUNICATION

2.4.1. LOST COMMUNICATION PROCEDURE DURING ARRIVAL

In case of radio communication failure, the last cleared and acknowledged level shall be maintained until the appropriate primary holding pattern (SVD, ALM, CDA, LUGAS, ROSBI). Descend to FL80 (FL100 for SVD) in the holding pattern. If already at a lower level, maintain that level. From the primary holding pattern proceed via SVD, ALM, CDA, KOR or TNO direct to KAS. Maintain FL80 (FL100 via SVD) or last assigned and acknowledged level or altitude.

If radio communication failure occur after passing over or abeam the primary holding fix proceed direct to KAS. Maintain FL80 (FL100 via SVD) or last assigned and acknowledged level or altitude.

From KAS perform the appropriate instrument approach procedure.

2. ARRIVAL

2.4.2. LOST COMMUNICATION PROCEDURE DURING MISSED APPROACH

In case of radio communication failure during a missed approach, climb to 3000' according to the Missed Approach Procedure, maintain 3000' and track for three minutes, then turn LEFT to KAS for a new approach.

2.5. OTHER INFORMATION

2.5.1. DEPENDENT PARALLEL APPROACHES RWYS 04L/22R AND 04R/22L

Decision concerning applicable RWY will be passed by Approach Control to ACFT not later than on intermediate approach. Expect dependent parallel operations between 0500-2200LT if VIS is 800m or more. RWYs 04L and 22L can be expected, or as directed.

3. DEPARTURE

3.1. DE-ICING

Request for deicing shall be made as early as possible to Clearance Delivery or Kastrup Apron. Departing ACFT shall obtain push-back or start-up approval and taxi instruction. Number in the deicing queue will be provided by Kastrup Apron when reporting ready for push-back/taxi.

At the platforms, the following frequencies are to be used:

TWY A: 130.65 123.4

TWY B: 131.65

TWY V: 131.97

Before moving away from the platform ACFT shall wait for "all clear signal" (thumb up) and taxi clearance.

The platforms are covered by a special friction surface, but still the braking action may be reduced due to de-icing fluid.

3.2. START-UP, PUSH-BACK & TAXI PROCEDURES

3.2.1. GENERAL

On Apron North, departing ACFT shall obtain push-back approval and taxi instruction. However, ACFT leaving stand by own power shall obtain taxi instruction only, except in de-icing situations, where ACFT shall obtain start-up approval as well.

In other areas, all departing ACFT shall obtain push-back or start-up approval and taxi instruction.

Permission to push-back or taxi-out from a stand or position must not be requested unless the tractor/ACFT is ready to perform the manoeuvre immediately.

Engine start-up of ACFT larger than code C is at designated start-up positions on the TWYs only.

ACFT pushing back from stands A4, A6, A8, A18 thru A22 and B2 must not start the engines until the ACFT is placed at a designated start-up position on the TWY, properly aligned with the centerline.

Between 2200-0500LT ACFT departing stands A30 thru A34 must not start up engines until the ACFT is placed at position Z4.

KASTRUP Tower will give permission to cross RWY 12/30.

3. DEPARTURE

3.2.2. JET ACFT

On nose-in/push-back stands, jet engine start-up must take place after push-back has been initiated only, unless APU is unserviceable or ACFT is not fitted with APU. However, code D and E ACFT are not allowed to perform engine start-up until after the ACFT has been towed onto its assigned start-up position on the apron.

For simultaneous push-backs directions will be given by KASTRUP Apron.

3.2.3. PROPELLER ACFT

During start-up of multi-engine propeller ACFT noise should be reduced as much as possible.

On nose-in/push-back stands, one engine only must be started on the stand. Start-up of remaining engines after push-back.

On turn-in/turn-out stands one engine only should be started on the stand.

3.3. SPEED RESTRICTIONS

MAX 250 KT at or below FL 70.

3.4. NOISE ABATEMENT PROCEDURES

TAKE-OFF RESTRICTIONS

Departures crossing the sector boundaries shown on chart 10-4 will be investigated by the authorities.

Propeller & turboprop ACFT with take-off weight less than 11000 KGS between 2300-0600LT:

- RWY 22L: Turn must not be commenced until having passed KAS 2 DME (LARSO).
- RWY 22R: Turn must not be commenced until having passed KAS 2 DME (RUBAT).

Propeller & turboprop ACFT with take-off weight of 11000 KGS or more and all jets:

- RWY 22L: Take-off shall be carried out from position V1 or V2/1. Turn must not be commenced until having passed KAS 2 DME (LARSO).
- RWY 22R: Turn must not be commenced until having passed KAS 2 DME (RUBAT).
- RWY 12: Position K1/F1 must not be used for take-off. Take-off for jet ACFT shall be carried out from position K3, additionally the following apply:
 - ACFT types A330-200/-300, A340-200/-300, B747 (all versions), B767-400, B777-200, DC10 (all versions), IL86, IL96-300, L1011 (all versions) and MD11 shall take-off from position K3 and taxi via K2 or via F2 and F1;
 - ACFT types A340-500/-600, AN124, AN225, B777-300 and C5/L500 Galaxy shall take-off from position K3 and taxi via F2 and F1.

Take-off for propeller & turboprop ACFT from position K2, K3 or D. However, ACFT type AN22 planned to take-off from position K2 or K3 shall taxi via K2 or F2 or F1. Turns must not be commenced until having passed KAS R-078.

- RWY 30: Take-off shall be commenced from position G1. Jet ACFT must arrange take-off in such a way, that maximum sound pressure level at Noise monitoring point No.10 (approx. 1.9 NM/3.5 KM from the beginning of RWY 30) does not exceed 110 PNdb. Turns must not be commenced until having passed KAS R-358.

If take-off is planned from RWY 04L/R, 22L/R or RWY 12 from position K2, K3 or D and can not be carried out (due to changes in weather or RWY conditions occurring not more than 1 hour prior planned take-off time) take-off is allowed on:

- RWY 12 from position 12-X or K2 between 0600-2300LT;
- RWY 30 between 0700-2200LT irrespective that the maximum sound pressure level exceeds 110 PNdb at Noise monitoring point No.10.

3. DEPARTURE

3.5. LOST COMMUNICATION

In case of radio communication failure climb to level assigned to the SID. Maintain until the departure designation point (ASTOS, KEMAX, SIMEG, BALOX, BETUD, NEXEN, KOPEX, LANGO, ODN, MIKSI, GOLGA or VEDAR). Then climb to the FL stated in the flight plan. In case of radio failure under radar vectoring, ACFT shall as quickly as possible revert to the assigned SID.

3.6. OTHER INFORMATION

3.6.1. DATALINK DEPARTURE CLEARANCE (DCL)

Earliest time for obtaining predeparture clearance via datalink (ACARS) is 30 min prior to EOBT or CTOT, whichever is later.

Latest time for obtaining clearance is 10 min after EOBT or CTOT, whichever is later.

The cockpit acknowledgement of the clearance has to be sent via datalink within 5 min after receiving the clearance.

DOCKING GUIDANCE SYSTEMS

AGNIS - Azimuth Guidance Nose-In System

AGNIS Indications:

RED GREEN

Adjust RIGHT
towards GREEN

GREEN GREEN

OK

GREEN RED

Adjust LEFT
towards GREEN

AGNIS must be used from left-hand cockpit seat only.
The seat must be in neutral position.

PAPA - Parallax Aircraft Parking Aid

Stop when the appropriate acft type marking on the PAPA front plate is aligned with the rear light-tube.
When AGNIS/PAPA are switched off, stand is not cleared for entry.

APIS - Aircraft Parking and Information System

Check for correct acft type on upper display.
Adjust according to indications of INOGON display.
Slow down and stop according to closing-rate Indicator on display.
Display automatically shut down after some seconds.

SAFEDOCK

Check for correct acft type on upper display.
Adjust according to horizontal red arrows on display.
Slow down and stop as indicated by vertical closing-rate Indicator.
Display automatically shut down after a short time or when bridge autolevel is turned on.
Display will remain in operation in case the acft has overshoot parking position.
