Airport Information For EFHK

Terminal Charts For EFHK

Revision Letter For Cycle 01-2014

Change Notices

Notebook

General Information

Location: Helsinki Fin
IATA Code: HEL
Lat/Long: N60° 19.0' E024° 57.8'
Elevation: 179 ft

Airport Use: Public
Magnetic Variation: 8.2°E

Fuel Types: Jet A-1
Repair Types: Major Airframe, Major Engine
Customs: Yes
Airport Type: IFR
Landing Fee: Yes
Control Tower: Yes
Jet Start Unit: No
LLWS Alert: No
Beacon: No

Sunrise: 0722 Z
Sunset: 1329 Z,

Runway Information

Runway: 04L
Length x Width: 10039 ft x 197 ft
Surface Type: asphalt
TDZ-Elev: 139 ft
Lighting: Edge, ALS, Centerline, TDZ

Runway: 04R
Length x Width: 11286 ft x 197 ft
Surface Type: asphalt
TDZ-Elev: 160 ft
Lighting: Edge, ALS, Centerline
Displaced Threshold: 787 ft
Stopway: 164 ft

Runway: 15
Length x Width: 9518 ft x 197 ft
Surface Type: asphalt
TDZ-Elev: 162 ft
Lighting: Edge, ALS, Centerline, TDZ

Runway: 22L
Length x Width: 11286 ft x 197 ft
Surface Type: asphalt
TDZ-Elev: 164 ft
Lighting: Edge, ALS, Centerline, TDZ

Stopway: 197 ft

Runway: 22R
Length x Width: 10039 ft x 197 ft
Surface Type: asphalt
TDZ-Elev: 177 ft
Lighting: Edge, ALS, Centerline, TDZ
Displaced Threshold: 197 ft

Runway: 33
Length x Width: 9518 ft x 197 ft
Surface Type: asphalt
TDZ-Elev: 147 ft
Lighting: Edge, ALS, Centerline

Helsinki Arrival Approach Control 119.9

1. GENERAL

1.1. ATIS

D-ATIS Arrival 135.07
D-ATIS Departure 114.2

1.2. NOISE ABATEMENT PROCEDURES**1.2.1. GENERAL**

In order to reduce ACFT noise impact on residential areas in the vicinity of Helsinki APT the following procedures will be applied:
Flights below 2000' over the city of Helsinki must be avoided unless lower altitude is necessary for take-off or landing.

1.2.2. PREFERENTIAL RUNWAY SYSTEM**LANDINGS**

1. Rwy 15 2. Rwy 22L 3. Rwy 04L 4. Rwy 04R 5. Rwy 22R 6. Rwy 33

DEPARTURES

1. Rwy 22R 2. Rwy 22L 3. Rwy 04R 4. Rwy 33 5. Rwy 04L 6. Rwy 15

Selection of RWY-in-use is based on safety aspects and temporary restrictions concerning RWY availability.

RWY 15 is not used for departures and RWY 33 for landings, except between 0600-2300LT for turbo-props and other propeller-driven ACFT.

1.2.3. NIGHTTIME RESTRICTIONS

ACFT may be vectored to ILS approach from IAF LAKUT in order to reduce noise impact.

1.2.4. RUN-UP TESTS

Scheduled maintenance run-ups, excluding idle power, must be performed on the run-up area and shall be avoided between 2200-0700LT and on Sundays. Exceptions only as agreed with the TWR.

1.2.5. REVERSE THRUST

Pilots are recommended to avoid reverse thrust except idle thrust after landings.

1.2.6. AUXILIARY POWER UNIT (APU)

The use of APU shall be restricted only to unavoidable situations.

1.2.7. CONTINUOUS DESCENT OPERATIONS

In order to reduce ACFT noise and emissions, ATC gives clearances allowing continuous descent, traffic situation permitting. Continuous descent can be planned based on track distance information of the STAR or, when vectored, on estimated track distance provided by ATC.

1.3. LOW VISIBILITY PROCEDURES (LVP)**1.3.1. GENERAL**

- All RWYs are approved for LVP for take-offs when the RVR is 550m or less.
- Low Visibility Procedures become effective when TDZ RVR decreases to 600m or the ceiling decreases below 200'.
- The application of LVP will be informed to the pilots via ATIS or by ATC.
- ATC will always report the TDZ RVR. Mid RVR and roll-out RVR will only be reported if they are less than the TDZ RVR and below 800m, or when less than 400m, or requested by pilot.
- In case the APT is unable to comply with LVP, pilots are informed either via ATIS or by ATC:
"Airport unable to comply with Low Visibility Procedures."

1. GENERAL

1.3.2. ARRIVAL

After landing pilots shall maintain on Tower frequency and report "RUNWAY VACATED" not until the ACFT has either completely passed the CAT II/III holding position sign or is on the TWY parallel to RWY.

1.3.3. DEPARTURE

Departing ACFT taxiing on manoeuvring area shall not pass CAT II/III holding positions and stop bar lights unless cleared by ATC and stop bar lights are switched off.

1.3.4. CAT II APPROACHES

P-RNAV approved ACFT may intercept the ILS LOC by own navigation using RNAV transition, or may request radar vectoring. Other ACFT will be vectored so, that the intercept of ILS LOC is not less than 10 NM before touchdown.

1.4. SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM

1.4.1. ADVANCED SURFACE MOVEMENT RADAR UTILISING MODE S

ACFT operators should ensure that Mode S transponders (if equipped) are able to operate when the ACFT is on the ground.

Flight crew of a Mode S-equipped ACFT shall

- select the assigned code and activate the Mode S transponder from request of push-back or taxi, whichever is earlier;
- keep transponder activated after landing, continuously until ACFT is fully parked on stand;
- set the Mode A code 2000 immediately after parking, before selecting OFF or STAND-BY.

Activation of the Mode S transponder means selecting AUTO mode, ON, XPNDR, or the equivalent, according to the specific installation. Selection of the STAND-BY mode will NOT activate the Mode S transponder.

Flight crew of ACFT equipped with Mode S having an ACFT identification feature should also set the ACFT identification. This setting is the ACFT ident specified in item 7 of the flight plan. ACFT ident should be entered from the request for push-back or taxi, whichever is earlier, through FMS or transponder control panel.

1.5. TAXI PROCEDURES

1.5.1. GENERAL

For wingspan restrictions refer to 10-9 charts.

Reduced wingtip clearances exist between ACFT on parallel TWYs as well as between ACFT and objects including parked ACFT and vehicles on service roads. Adhere strictly to TWY centerline markings.

Taxiing on apron is always subject to clearances and instructions given by Ground.

ATC issues clearances for taxiing only within area of Apron Control competence.

ACFT taxiing on the apron shall follow the yellow taxi guidance lines. No deviations or shortcuts are permitted except under guidance of a Follow-me car or after special instructions by ATC.

ACFT taxiing on TWYs W, Y and Z shall give priority to ACFT vacating RWY.

1.5.2. APRON SPOT COORDINATION POINTS

Apron spots (An orange circle with two digits, painted DAY markings only) will be used as coordination points for traffic to and from aprons. Apron spots will not be used if the markings are temporarily covered by ice or snow. Apron spots shall not be used as parking stands.

1. GENERAL

1.6. PARKING INFORMATION

Stands 12 thru 20 equipped with docking guidance system.

Stands 21 thru 38 and 141 thru 143 equipped with docking guidance system SAFEDOCK.

Clearance distances between the stand and the passenger bridge for ACFT of code letter C thru E: 9'/2.7m longitudinal, 4'/1.25m lateral.

Restrictions to the use of stands:

Stand 12:

The longitudinal clearance distance for ACFT type Avro RJ85 is 7'/2.2m.

Stands 13 thru 22:

The longitudinal clearance distance between ACFT engine and passenger bridge for ACFT type A319 is 6'/1.8m and for ACFT type E170 6'/1.9m.

Docking is allowed only with special permission.

Stands 31 thru 38:

Clearance distances between the stands and the passenger bridges for all ACFT types are 6'/1.8m longitudinal and 4'/1.25m lateral.

2. ARRIVAL

2.1. NOISE ABATEMENT PROCEDURES

Due to VFR traffic flying below IFR traffic an ACFT carrying out visual approach shall maintain an altitude of at least 2000' until HEL 7 DME, and established on final. The final stage of a visual approach shall be performed at descent profile equivalent to at least 3°.

2.2. CAT II OPERATIONS

RWYs 04L, 22L and 22R approved for CAT II operations, special aircrew and ACFT certification required.

2. ARRIVAL

2.3. RWY OPERATIONS

2.3.1. MINIMUM RWY OCCUPANCY TIME

Pilots are reminded that rapid exit from the RWY enables ATC to apply minimum spacing on final approach that will achieve maximum RWY utilisation and will minimize the occurrence of go-arounds.

The ACFT vacating RWY has priority to other taxiing traffic.

Pilots should prepare their landings so that they are able to vacate the RWYs in accordance with the following table when RWY conditions permit:

Preferred Turn-offs			
RWY	TWY	Dist from THR to Turn-off	Class
04L	WK	5620'/1713m	All
	WM	4498'/1371m	Medium Prop/Light
04R	ZG	4833'/1473m	All
	ZD	6657'/2029m	Heavy
15	YF	5066'/1544m	Medium Jet Medium Prop/Light
	YH	6102'/1860m	Heavy
	YL	7917'/2413m	
22L	ZH	4967'/1514m	All
	ZJ	5856'/1785m	Heavy
22R	WL	3484'/1062m	Medium Prop/Light
	WP	4478'/1365m	All
	WS	5807'/1770m	Heavy
33	YF	3812'/1162m	Medium Prop/Light
	Z	6804'/2074m	Heavy Medium Jet

In order to ensure minimum RWY occupancy time, it is recommended to name the expected turn-off during the approach briefing.

2.4. TAXI PROCEDURES

2.4.1. GENERAL

ACFT landed at RWY 22L shall not vacate via TWY ZG unless otherwise instructed by ATC.

ACFT using RWY 04R/22L or 15/33 shall contact Ground immediately after vacating the RWY for taxi clearance within area of Apron Control competence.

ACFT vacating RWY 04L/22R shall remain on the appropriate Tower frequency unless otherwise instructed.

If no other instruction than ACFT stand is given, ACFT shall use the TWY parallel to the RWY to the TWY closest to the assigned ACFT stand.

2.4.2. APRON SPOT COORDINATION POINTS

After receiving taxi instruction to an apron spot proceed to the appropriate apron spot. Hold ACFT nose on the spot until further taxi instructions have been issued by ATC.

2. ARRIVAL

2.5. OTHER INFORMATION

2.5.1. SIMULTANEOUS OPERATIONS

Dependent parallel approaches will be used on RWYs 04L/R or 22L/R.

ATIS broadcast will contain the following information:

"Simultaneous dependent ILS approaches in progress on runways 22R and 22L (04R and 04L)."

Independent parallel approaches will be used on RWYs 04L/R or 22L/R.

ATIS broadcast will contain the following information:

"Simultaneous independent ILS approaches in progress on runways 22R and 22L (04R and 04L)."

3. DEPARTURE

3.1. DIGITAL DEPARTURE CLEARANCE (DCL)

Digital enroute clearance shall be requested MAX 25 min prior to EOBT. A digital enroute clearance contains:

- APT of destination;
- Designated departure RWY;
- Standard instrument departure (SID) or heading and altitude after departure;
- TMA exit point;
- SSR-code;
- ADT (Approved Departure Time = CTOT, if applicable);
- Next frequency;
- CTOT (if applicable);
- QNH;
- TSAT (if applicable).

Examples of digital enroute clearances:

HDG/ALT:

ABC123 CLRD TO ESSA OFF 22R

HDG 280 CLIMB TO 4000 FT VECTORS RUNEN

SQUAWK 2202 ADT 1110

NEXT FREQ 118.125

CTOT 1110

QNH 1013

TSAT 1103

The following procedure applies:

The pilot shall acknowledge the enroute clearance by means of a Departure Clearance Readback message (CDA) downlink within 5 minutes; otherwise a negative FSM (Flight System Message) will be issued and pilot shall revert to voice procedures.

Only the following optional free text messages are noticed:

RWY other than in use only permitted due performance:

"REQ[RWY]"

ACFT unable to follow P-RNAV SID:

"REQ NON PRNAV"

When using the DCL service pilots shall maintain a listening watch on the channel published for HELSINKI Delivery.

An en-route clearance issued by RTF always supersedes an enroute clearance transmitted via the DCL service.

3. DEPARTURE

3.2. DE-ICING

3.2.1. GENERAL

ACFT de-icing may only be carried out in areas specifically designated by the APT.

De-icing may also be performed on Remote De-icing Apron (Apron 6 and 8).

De-icing must be requested between 0330-2230 UTC through HELSINKI De-icing Coordinator on 127.02. The de-icing coordinator will then inform the pilot of which de-icing stand or area to use and will forward the request to the de-icing company.

Other times de-icing must be requested via de-icing company.

Pilots are recommended to monitor the de-icing coordinator's frequency.

Pilots using ground handling at Finavia's business flight terminal shall inquire de-icing coordination from the ground handling officer.

All queries regarding de-icing requests shall initially be made direct to the de-icing coordinator.

Pilots must always request route clearance from ATC before de-icing begins (when the ACFT is ready to begin de-icing). This requirement also applies when de-icing is to be carried out in ACFT parking areas.

3.2.2. DE-ICING STANDS

Stands 122D and 124D are de-icing stands.

3.2.3. SPECIAL PROCEDURES FOR REMOTE DE-ICING APRON

When de-icing is performed on the Remote De-icing Apron, ATC will hand over the ACFT at the perimeter of the apron to the Remote De-icing Coordinator (normally on 133.85).

When notifying the coordinator, pilots shall use their ACFT call sign for identification. The coordinator will direct the ACFT to one of the de-icing stands.

The Remote De-icing Aprons, including their entry and exit taxi lines, lie outside the normal manoeuvring area. Pilots are reminded to proceed with extreme CAUTION within this area so as not to endanger other personnel or vehicles operating in the area.

Pilots must avoid using excessive power when taxiing within this apron.

De-icing is complete when the pilot has received final notification (in accordance with the AEA anti-icing code) by radio. In the Remote De-icing Apron, the final notification is considered as including the "all clear" signal. The anti-icing code cannot be given unless all the conditions of the "all clear" signal have been met. Pilots must remain on the coordinator's frequency until the anti-icing code has been received and the pilot has received instructions to contact ATC again.

In the initial call to ATC the pilot shall notify them of the flight's radio call sign and the de-icing stand number being used. The ACFT must not move until taxiing instructions have been received from ATC and acknowledged.

3.3. START-UP, PUSH-BACK & TAXI PROCEDURES

3.3.1. COLLABORATIVE DECISION MAKING PROCEDURES (CDM)

3.3.1.1. TARGET OFF BLOCK TIME (TOBT)

TOBT is the estimated time when ACFT is ready for immediate engines start-up and/or push-back after receiving clearance from TWR. An exception exists in de-icing procedures when the TOBT owned by the airline operator excludes time consumed for de-icing operations at the ACFTs original parking position. In this case TOBT is the time when an ACFT is ready to start the de-icing process.

If the ACFT is not ready within +/-5 minutes of the last informed TOBT the TOBT must be updated accordingly. TOBT can be updated as described below. Observe, that the target start-up time (TSAT) is generated based on the TOBT. Operators are encouraged to adjust TOBT as close to real as possible.

CDM TOBT procedure doesn't replace the pilots responsibility to keep the adequate flight plan valid and within the given limits.

3. DEPARTURE

3.3.1.2. TARGET START UP APPROVAL TIME (TSAT)

Time in which the flight crew can request ATC for engines start-up (and push-back).

TSAT is provided by the ATC in order to optimize departure sequence with regard to EOBT, TOBT, ATFM restrictions (CTOT), de-icing and local conditions.

First TSAT will be issued after submission of the first TOBT, but not earlier than 40 MIN prior EOBT. ATC informs pilots of the TSAT in connection of the en-route clearance.

In interval TSAT +/-5 minutes the flight crew shall request start-up and in case of NOSE-IN stand, push-back. Engines start-up or push-back shall be commenced immediately after receiving the clearance.

If the crew does not request start-up clearance within the interval TSAT +/-5 minutes and TOBT is not updated the flight is excluded from the sequence until a new TOBT is submitted.

In general, TSAT is not changed during the last TSAT-20 minutes period. However, improvement to the TSAT can be accepted by confirming (or updating) TOBT during this time manually directly to the CDM application.

Also other constraints, like change in CTOT, may cause an update to the TSAT.

Changed TSAT times can be obtained via ATC (R/T), Cockpit laptop (CDM application), Docking guidance system (where available) or your ground handling agent.

Due to operational reasons ATC may provide start-up clearance regardless of the existing TSAT.

After receiving the TSAT the pilot does not need to update flight plan (FPL) and TOBT accordingly. However, TOBT and FPL EOBT always have to encounter with each other (TOBT has to fit to the flight plan window).

3.3.1.3. CDM DE-ICING PROCEDURES

De-icing event is part of the CDM process. Obtaining the optimum departure sequence should the de-icing order be done as early as possible. Placing a de-icing order will cause a recount in the departure and start-up sequence.

If the de-icing stand has been assigned to the original parking position, TSAT is always after the calculated end of the de-icing process. Note that also other constraints for the TSAT assignment, like CTOT, may exist.

Missing the valid TSAT due to de-icing reasons (gate deicing) shall be immediately reported to your de-icing agent or to the ATC TWR.

3.3.2. GENERAL

Departing IFR flights will receive enroute clearance as follows:
- H24: HELSINKI Delivery

Route clearance shall be requested from appropriate ATC unit not earlier than 10 minutes before the estimated start-up. However, the route clearance must always be requested before de-icing begins. Type of ACFT, ATIS received and (when appropriate) the request to use other RWY than the RWY in use shall be stated.

3.3.3. START-UP & PUSH-BACK

Contact Ground for start-up and push-back clearance. The stand of the ACFT shall be stated in the initial contact with the ATC unit.

3. DEPARTURE

3.3.4. TAXIING

Unless otherwise instructed ACFT shall use shortest possible way to TWY parallel to the RWY.

ACFT leaving apron to manoeuvring area shall give priority to the ACFT taxiing on TWYs Y and Z.

3.3.5. APRON SPOT COORDINATION POINTS

After receiving taxi instruction to enter an apron spot proceed to the appropriate apron spot and hold ACFT nose on the spot. Do not enter a TWY until a further taxi clearance has been issued by ATC.

3.4. NOISE ABATEMENT PROCEDURES

After take-off ACFT shall climb as rapidly as practicable to at least 2000'. Standard Instrument Departure Routes depicted on Helsinki SID charts are also minimum noise routings.

Moderately quiet jets (ACFT with flyover noise level less than 89 EPNdB according to ICAO Annex 16, Chapter 3) are allowed to use some PROP/TURBOPROP SID routes. These routes are indicated on the charts concerned.

3.5. RWY OPERATIONS**3.5.1. MINIMUM RWY OCCUPANCY TIME**

On receipt of line-up clearance pilots should ensure, commensurate with safety and standard operating procedures, that they are able to taxi into correct position at the hold and line-up on the RWY as soon as the preceding ACFT has commenced its take-off roll or landing run.

Pilots shall ensure that cockpit checks have been completed prior to line-up and that they are able to commence the take-off roll immediately after clearance for departure has been issued.

Pilots not able to comply with these requirements should notify ATC.

3.6. OTHER INFORMATION

Due to jetblast hazard, ACFT departing RWY 22L from TWY Y or ZD intersection shall use idle power until clearance for departure has been issued.

3. Altitudes ensure obstacle clearance within the area concerned plus a 3NM buffer area.

ARRIVAL INSTRUCTIONS

1. NON-RNAV HOLDING

IDENT & POSITION	MINIMUM LEVEL	INBOUND COURSE	TURN DIRECTION	MAX SPEED	TIME
PORVOO (PVO) N60 17.7 E025 35.3	3000'	218°	LEFT	230 KT	1 MIN

2. FPL/DESCENT CLEARANCE

FPL for inbound IFR traffic to EFHK shall be closed on the following IAFs: ELPIR, INTOR, LAKUT, OKLOR or PEXEN. IAF ELPIR is available only for traffic via LEDUN.

If unable to comply inform ATC immediately.

Traffic inbound from TAMPERE airspace:

ACC will normally give descent clearance to arriving traffic to FL100.

Traffic inbound from ST PETERSBURG airspace:

ACC will normally give descent clearance to traffic via IAF ELPIR to FL140.

Traffic inbound from TALLINN airspace:

ACC/APP will normally give descent clearance via IAF INTOR to FL100.

If the flight level given in FPL is lower than FL100 aircraft shall be cleared to maintain FL90.

3. SPEED RESTRICTIONS

Speed restrictions to all aircraft:

Unless otherwise instructed by ATC the aircraft shall follow speed limit MAX 250 KT at HEL 30 DME.

Speed restrictions for RNAV STARs are published on charts concerned.

4. INITIAL CONTACT

At first contact with HELSINKI Approach state

- designator of the last received ATIS broadcast
- type of aircraft
- level
- RNAV STAR or RADAR heading given by ATC.

To avoid frequency congestion when changing from HELSINKI Radar to HELSINKI Arrival state: HELSINKI Arrival + call sign.

When changing from approach control frequency to tower frequency state: HELSINKI Tower + call sign + runway.

ARRIVAL INSTRUCTIONS

5. RNAV STAR

Final approach can not be performed without appropriate clearance.
ATC will give descent clearances.

In case there are two RNAV STARs published from an IAF to the same RWY, designator of the other route differs from the normal naming principle of arrival routes. Instead of the first waypoint, the other RNAV STAR is named after the second waypoint on the route.

6. INBOUND CLEARANCE

Arriving traffic will be cleared normally to follow RNAV STAR serving the runway in use. An aircraft unable to utilize the given RNAV STAR shall inform ATC immediately ("NEGATIVE RNAV") and will then be cleared by ATC to leave IAF on RADAR heading.

7. RNAV STAR LOST COMM PROCEDURE

If RNAV STAR has been given and acknowledged follow STAR to the respective RWY and execute instrument approach and land.

During RADAR vectoring after IAF proceed to ELPIR holding at last assigned and acknowledged altitude/FL or MHA if higher. Leave holding at 3000' (RWY 04R: 3300', RWY 22L: 3100') according to current flight plan ETA and execute instrument approach for last acknowledged RWY.

Aircraft equipped with onboard telephone dial +358 9 8277 3324.

RNAV aircraft use RNAV STAR to join instrument approach.

D-ATIS
135.07Apt Elev
179'

Alt Set: hPa Trans level: By ATC Trans alt: 5000'

1. ATC vectors the aircraft to final approach if traffic situation requires or the aircraft is unable to utilize given RNAV STAR. 2. STARs must be flown according to the defined waypoint sequence until the last waypoint. Separate clearance to inbound is not required. 3. STARs are also minimum noise routings. 4. Descent clearance will be given by ATC. 5. Altitude/FL/speed constraints must always be followed as published unless explicitly cancelled by ATC.

DME AND VOR REQUIRED

CONVENTIONAL INITIAL APCH PROCEDURE FROM PVO FOR ALL RWYS

**LOST COMM ROUTING**

If RNAV STAR has been given and acknowledged follow STAR to the respective RWY and execute instrument approach and land.

During RADAR vectoring after IAF proceed to PVO holding at last assigned and acknowledged altitude/FL or MHA if higher. Leave holding at 3000' (RWY 04R: 3300' or RWY 22L: 3100') according to current flight plan ETA and execute instrument approach for last acknowledged RWY.

Aircraft equipped with onboard telephone dial +358 9 8277 3324.

RNAV aircraft use RNAV STAR to join instrument approach.

VISUAL NOSE-IN DOCKING GUIDANCE SYSTEM

**Instructions:**

1. Follow taxi-in line and the centerline beacon guidance.
2. Check correct aircraft type is flashing. MAX approach speed is 11km/h (3m/sec). If exceeded, display indicates "SLOW DOWN".
3. Fully yellow colored closing rate indicator indicates that aircraft position is at least 46'/14m to stop position. When distance is 43'/13m to stop position the yellow colored closing rate indication starts to shorten from the bottom.
4. When stop position is reached, display indicates "STOP". Correct parking is indicated as "OK".
5. If aircraft overshoots the limit for correct parking, display indicates "TOO/FAR".
6. "BRIN": Bridge not in parking position
7. Display automatically shuts down after parking.
8. In case of malfunction in the docking guidance system interrupt taxiing and contact HELSINKI Apron.

VISUAL NOSE-IN DOCKING GUIDANCE SYSTEM (SAFEDOCK)

**Instructions:**

1. Follow taxi-in line and the centerline lights guidance.
2. Check correct aircraft type is displayed.
3. The floating arrows indicate that the system is ready for aircraft to start docking procedure. When the system is tracking the aircraft, the floating arrows are replaced by the closing rate bar.
4. The pilot must not proceed beyond the bridge, unless the floating arrows have been superseded by the closing rate bar.
5. MAX approach speed is 11km/h (3m/sec). If exceeded, display indicates "SLOW".
6. During bad weather conditions the visibility for the docking system can be reduced. In that case the display will disable the floating arrows and display aircraft type and "SLOW". As soon as the system detects the approaching aircraft, the closing rate bar will appear.
7. "STOP/ID FAIL": Aircraft type verification is failed. Interrupt taxiing and contact HELSINKI Apron.
8. Fully yellow colored closing rate bar indicates that aircraft position is at least 39'/12m to stop position. When distance is 38'/11.5m to stop position the yellow colored closing rate indication starts to shorten from the bottom, one row indicates 1.6'/0.5m.
9. When stop position is reached, display indicates "STOP". Correct parking is indicated as "OK".
10. If aircraft overshoots the limit for correct parking, display indicates "TOO FAR".
11. "WAIT": Some object is blocking the view, aircraft is lost during tracking or system is not ready. Wait until the message is superseded by closing rate indicator and aircraft type.
12. Display automatically shuts down after parking.
13. In case of malfunction in the docking guidance system interrupt taxiing and contact HELSINKI Apron.
