Airport Information For ESSA

Terminal Charts For ESSA

Revision Letter For Cycle 01-2014

Change Notices

Notebook

General Information

Location: Stockholm Swe
IATA Code: ARN
Lat/Long: N59° 39.1' E017° 55.1'
Elevation: 137 ft

Airport Use: Public
Magnetic Variation: 5.3°E

Fuel Types: 100 Octane (LL), Jet A-1
Repair Types: Major Airframe, Major Engine
Customs: Yes
Airport Type: IFR
Landing Fee: Yes
Control Tower: Yes
Jet Start Unit: No
LLWS Alert: No
Beacon: No

Sunrise: 0745 Z
Sunset: 1403 Z,

Runway Information

Runway: 01L
Length x Width: 10830 ft x 148 ft
Surface Type: asphalt
TDZ-Elev: 100 ft
Lighting: Edge, ALS, Centerline, TDZ

Runway: 01R
Length x Width: 8202 ft x 148 ft
Surface Type: asphalt
TDZ-Elev: 137 ft
Lighting: Edge, ALS, Centerline, TDZ

Runway: 08
Length x Width: 8202 ft x 148 ft
Surface Type: asphalt
TDZ-Elev: 108 ft
Lighting: Edge, Centerline

Runway: 19L
Length x Width: 8202 ft x 148 ft
Surface Type: asphalt
TDZ-Elev: 98 ft
Lighting: Edge, ALS, Centerline, TDZ

Runway: 19R
Length x Width: 10830 ft x 148 ft
Surface Type: asphalt
TDZ-Elev: 118 ft
Lighting: Edge, ALS, Centerline

Runway: 26
Length x Width: 8202 ft x 148 ft
Surface Type: asphalt
TDZ-Elev: 124 ft
Lighting: Edge, ALS, Centerline

Communication Information

ATIS 121.625 Departure Service
ATIS 119.0 Arrival Service
Arlanda Tower 128.725
Arlanda Tower 125.125
Arlanda Tower 118.5
Ground West Ground Control 121.7 MF
Ground North Ground Control 121.925 MF
Ground East Ground Control 121.975 MF
Arlanda Clearance Delivery 121.825

1. GENERAL

1.1. ATIS

D-ATIS Arrival 119.0
D-ATIS Departure 121.62

1.2. NOISE ABATEMENT PROCEDURES

1.2.1. GENERAL

ACFT certified to ICAO Annex 16, Volume I, Chapter 2 with MTOW less than 34t are not allowed to depart or arrive between 2200-0700LT.

1.2.2. REVERSE THRUST

Do not use more than idle reverse between 2200-0700LT except for safety reasons.

1.3. LOW VISIBILITY PROCEDURES (LVP)

1.3.1. GENERAL

LVP will be in operation when RVR falls below 550m or ceiling falls below 200'.

The application of LVP will be announced via ATIS.

Green/yellow color coded centerline lights are available on all exits until RWY strip area is vacated.

Pilots will be informed via NOTAM when LVP is in force.

LVP is applicable on apron FA pier A, apron BC pier B and terminal 4 and apron CD terminal 3 and 4.

Marshall will be provided by APT 24 hours.

1.3.2. ARRIVAL

RVR less than 550m during darkness or less than 300m during daylight, marshalling will be mandatory for arriving ACFT at a point entering the apron into a position turning into parking stand.

1.3.3. DEPARTURE

RVR less than 550m during darkness or less than 300m during daylight, marshalling will be mandatory for departing ACFT after finished push-back to a point exit the apron.

1.4. SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM

1.4.1. MODE S TRANSPONDER

APT is equipped with a surface movement radar utilizing Mode S.

ACFT operators shall ensure that Mode S transponders are able to operate and activated when the ACFT is on ground from the request for push-back or taxi whichever is earlier and after landing, until ACFT is fully parked.

1.5. RWY OPERATIONS

1.5.1. HIGH INTENSITY RWY OPERATIONS (HIRO)

In order to reduce delays and expedite traffic, HIRO should as far as possible be applied to all ACFT.

1.6. TAXI PROCEDURES

For Taxi Routings refer to 10-9 charts.

Movement on apron is subject to prior contact with Tower to provide any necessary information to maintain an orderly flow of traffic.

Taxiing between terminal building and an ACFT after completed pushed-back is not allowed unless instructed by Tower.

Taxiing or towing on apron is not allowed between entry ZF-ZG, ZH-ZK and ZL-ZN.

Apron S between TWYs SA and SC MAX wingspan 79'/24m.

1. GENERAL

The normal taxi route procedure is clockwise taxiing where parallel TWYs are established.

Pilots will receive instructions to change frequency when crossing the area boundaries of ARLANDA Ground. Pilots shall not change frequency without instructions from ATC. Depending on RWYs in use the areas of responsibility of ARLANDA Ground vary.

ACFT will receive first Ground frequency to contact from ARLANDA Clearance.

To avoid jet blast on parked ACFT on Apron F following procedure applies: ACFT at any part of in- or out-taxiing having ACFT parked behind, shall not use more than IDLE thrust. ACFT for any reason been forced to stop during these circumstances, shall avoid any use of break-away thrust and request assistance for pull into position of final stop or position where use of break-away thrust no longer constitute danger.

1.7. PARKING INFORMATION

1.7.1. PARKING/DOCKING GUIDANCE

SAFEDOCK available at stands 1 thru 20 and 31 thru 44.

INOGON parking aid available at stands 52 thru 60A, 69, 69L, 69R, F40 thru F44, G141 thru G149, R3 thru R9, R10 and S71 thru S79.

APIS available at stands 61 thru 68 and F28L thru F39R.

For stand graphic of visual docking guidance systems SAFEDOCK and SAFEGATE refer to 10-9 charts.

Whenever parking guidance system is not activated or not installed, ACFT shall wait on apron taxiline or outside stand whichever applicable until signal for entering stand has been received.

1.7.2. USE OF APU

APU shall not be used when parking ACFT, other than required to start engine or control cabin temperature. APU may thus not be started earlier than 5 min before estimated time of push-back or taxiing.

If APU is to be used earlier than such time, there shall be an agreement between airline and handling company in question.

1.8. OTHER INFORMATION

1.8.1. A380 ACFT OPERATIONS

- RWY 01L/19R will be used for take-off and landing.
- RWY exit/entry Y1, Y2, Y3, Y9 and Y10 are approved for A380.
- RWY 26 can be used for landing.
- RWY exit X2 approved for A380.
- TWY Y, PA and X between Y-ZQ will be used for taxiing. All taxiing will be marshalled.
- Judgemental oversteer shall be used at Y1, Y10, Y-PA-X and X2.
- Idle thrust shall be used on outer engines when taxiing.
- Parking will take place at F36 pier F.
- A380 push-back pole is not available. Operator shall secure for arrangements with own equipment.

2. ARRIVAL

2.1. SPEED RESTRICTIONS

Unless otherwise instructed, the following speeds apply. ACFT unable to conform shall inform ATC. ACFT below FL 100 shall fly at maximum IAS 250 KT. During approach, ATC will request speed reductions to maintain a steady flow. On base leg ATC will normally request IAS 180 KT. When established on final approach track, ACFT shall maintain IAS 160 KT or more until passing DME distance corresponding to OM stated on IAC. After confirmed approach clearance any speed limit will be cancelled if not expressively included in approach clearance.

2.2. NOISE ABATEMENT PROCEDURES

2.2.1. GENERAL

To reduce noise disturbances visual approaches are not allowed, and when cleared for ILS APCH 2500' (4000' for RWY 01R) shall be maintained until established.

2.2.2. RWY USAGE

RWY 01R is not available for landing during NIGHT between 2300-0600LT.
RWY 08 is not available for landing unless required for wind conditions.

2.2.3. CONTINUOUS DESCENT APPROACH (CDA)

The use of CDA is recommended provided this is consistent with ATC speed control requirements.

ATC may give descent clearance which does not comply with CDA procedures when the traffic situation requires.

2.3. CAT II/III OPERATIONS

RWYs 01L, 01R and 19L approved for CAT II/III operations, special aircrew and ACFT certification required.

2.4. RWY OPERATIONS

2.4.1. GENERAL

Arriving ACFT shall not leave RWY via exit TWY with turn exceeding 90 degrees.

2.4.2. HIGH INTENSITY RWY OPERATIONS

Pilots should prepare and plan their landing to be able to leave RWY via high speed turn-offs when RWY conditions permit.

3. DEPARTURE

3.1. DE-ICING

3.1.1. RWY 01L/19R OR RWY 08/26

De-icing will take place at stand or other advised de-icing spot.

At Terminal 2 push-back will be performed before de-icing starts.

De-iced ACFT is not allowed to taxi on TWY U between TWYs UC and UG and on TWY W between TWYs Z and W8.

For preventively de-iced ACFT no restrictions will apply.

3.1.2. RWY 01R/19L

De-icing will take place at remote de-icing apron M.

3.1.3. DE-ICING APRON M

After instructions from ARLANDA Ground, ACFT shall contact ARLANDA Apron on 131.42 before entering Apron M for information about stand. ACFT stop position will be indicated by yellow illuminated line, where contact with requested de-icing company shall be established.

Monitoring on Ground frequency is mandatory during whole procedure. After finished de-icing and clear signal, contact ARLANDA Ground for taxi clearance.

3. DEPARTURE

3.2. START-UP, PUSH-BACK & TAXI PROCEDURES

3.2.1. GENERAL

Approval for start-up/push-back/taxi must be obtained from ARLANDA Ground. Request of such permission shall include stand or position and only be made when ACFT is fully ready to comply.

Push-back approval includes permission to start engines during push-back.

3.2.2 AIRPORT COLLABORATIVE DECISION MAKING

3.2.2.1. START-UP AND PUSH-BACK

The pilot must request for start-up and push-back TOBT +/-5 min.

Pilot should ensure that flight is ready for start-up/push-back at TOBT +/-5 min. If flight is not ready within specified time window, pilots shall report to ground handling company who is responsible for TOBT.

3.2.3. DEPARTURE CLEARANCE

Departure clearance may be requested via datalink (DCL) -SITA/ARINC- or RTF from EOBT -25 min until EOBT +10 min.

At request state type of ACFT, stand position and latest received ATIS ID letter and QNH.

RWY other than RWY-in-use only permitted due to performance. When requesting DEP clearance using DCL, add "REQ[RWY]" in RMK field in RCD.

ACFT unable to follow FMS/RNAV SID shall (when using DCL) add "REQ NFMS" in RMK field in RCD.

Following procedure applies for DCL:

- Send a request for clearance (RCD);
- A flight system message (FSM) will be transmitted automatically;
 - If RCD is accepted; a pre-departure clearance (CLD) will be issued.
 - If RCD is rejected; revert to RTF procedures;
- Acknowledge pre-departure clearance with a read-back (CDA) within 5 min;
- When CDA is processed successfully, a positive FSM will be issued.

When using DCL service, monitor Clearance Delivery frequency.

Pilots shall verify that SID and RWY added into FMS is in accordance with received clearance. In event of any doubts or system related difficulties, RTF procedures shall be conducted.

A DEP clearance issued via RTF always supersedes a clearance transmitted via DCL.

3.2.4. PUSH-BACK

Push-back is compulsory for all nose-in stands. For self-service stands push-back is normally mandatory for all JET ACFT, however deviations are allowed.

Power-back as an alternative to push-back where mandatory is not allowed.

When delayed by calculated take-off time (CTOT), ACFT may be ordered to push and hold due to stand capacity according to instructions from Tower.

3.2.5. TAXIING

Taxiing out from Terminal 2 stands 61 and 62 via TWY UA, from stands 63 thru 65 via TWY UB and from stands 66 thru 69 via TWY UC.

Taxiing out from Terminal 5 Pier A stands 1 thru 7 via TWY ZL, from Pier B stands 12 thru 18 via TWY ZK.

Pilots not ready for immediate take-off during taxi-out shall advise TWR before entering RWY holding position.

3. DEPARTURE

3.3. NOISE ABATEMENT PROCEDURES**3.3.1. RWY USAGE**

RWY 19R is not available to departing ACFT between 2200-0700LT, except for performance reasons.

RWY 26 is not available for take-off unless required for wind conditions.

3.4. RWY OPERATIONS**3.4.1. HIGH INTENSITY RWY OPERATIONS**

Pilots should commence take-off roll without delay on receipt of take-off clearance. If unable to comply, Tower should be notified in advance.

ACFT shall request intersection take-off position from ARLANDA Ground earliest when on TWY or on initial contact with Tower.

3.5. OTHER INFORMATION**3.5.1. OUTBOUND IFR TRAFFIC****3.5.1.1. CLIMB SPEED**

ACFT shall inform TWR before take-off if unable to operate with 190 KT or higher from 2NM after take-off.

3.5.1.2. INITIAL CONTACT ON FMS/RNAV SID

Departing ACFT shall change frequency to STOCKHOLM Control only when instructed by Tower. At first contact report altitude to verify SSR Mode C.

3.5.1.3. ACFT NOT ABLE TO FOLLOW FMS/RNAV SID

ACFT shall inform ARLANDA Clearance. ACFT will be vectored to exit point stated in flight plan. Departing ACFT shall change frequency to STOCKHOLM Control only when instructed by Tower. At first contact report altitude and state "UNABLE RNAV SID".

3.5.1.4. OMNIDIRECTIONAL DEPARTURE PROCEDURE

Climb STRAIGHT AHEAD to MIM turning alt 600'.
Continue climb to appropriate MSA.

RNAV INSTRUCTIONS

APPROVED USERS, EQUIPMENT AND OPERATIONS

Foreign operators with aircraft with FMS/RNAV equipment which has a lateral position accuracy equal to or better than ± 1 NM for 95% of the flight time (RNP 1) may use the FMS/RNAV SIDs without a specific approval. Other types of RNAV equipment (e.g. Stand-alone GPS) must not be used for FMS/RNAV SIDs.

Note: A Basic RNAV (B-RNAV) approval does not constitute an approval for FMS/RNAV use.

NON-FMS/RNAV EQUIPPED AIRCRAFT

Inform Clearance Delivery by using phraseology "UNABLE RNAV SID DUE TO RNAV TYPE". After receiving a SID follow instructions for "NON-FMS/RNAV" in SID routing description and expect radar vectoring.

Additionally at first contact with STOCKHOLM Control aircraft shall report altitude to verify SSR Mode C and once again report that unable to follow FMS/RNAV SID by using phraseology "UNABLE RNAV SID".

RESTRICTED USE FOR CERTAIN AIRCRAFT TYPES

B757, B767 and MD-11 have FMS equipment which do not get the aircraft inside designated tracks after first turn (not valid for B757 & B767 with Honeywell Pegasus FMS).

"B757, B767, MD-11" in SID routing description requires aircraft to use following procedure:

1. After take-off disregard FMS.
2. At a specified DME distance turn to a specified track.
3. When established on specified track use FMS and fly direct to a specified waypoint.

FMS/RNAV EQUIPMENT FAILURE

If the airborne FMS/RNAV equipment fails, inform ATC as soon as possible. RADAR vectoring will be provided.

APPLIED PRACTICE FOR LOW-SPEED AIRCRAFT

Prop aircraft with a MTOW more than 9t which fulfil ICAO Annex 16, chapter 3 or 5 and prop aircraft with a MTOW less than 9t will during daytime 0600-2100 (0500-2000) be cleared to follow low speed departure routes (climb-out on a heading to an altitude) instead of SIDs. Low speed departure routes will be assigned by ATC.

Note: Some high speed prop aircraft will be cleared to follow SIDs (e.g. SAAB 2000, Dash 8 Q400). Some noisy prop aircraft will be cleared to follow SIDs due to environmental restrictions (e.g. Lockheed C-130 Hercules, Hawker Siddley HS 748).

REPORTING

Pilots and operators are requested to report any error or difficulty (e.g. discontinuity) with SIDs to:

Airspace team
LFV-ASD/PRO
Fax: +46-(0)11-19 22 46
E-mail: maria.ullvetter@lfv.se

RNAV AND NON-RNAV INSTRUCTIONS

VISUAL DOCKING GUIDANCE SYSTEM (SAFEGATE)

A. DESCRIPTION

The system is based upon a centerline beacon (azimuth guidance unit) and a stopping position indicator consisting of a display unit on the wall of the terminal building, in front of the cockpit.

B. DOCKING

1. Follow the taxi-in line and watch for centerline guidance.
2. Check correct aircraft type is flashing.
3. Check pair of green lights are lit = ready for docking.
4. The nose wheel will activate a sensor every 3'/1m the last 40'/12m to STOP and light a corresponding pair of yellow lights showing the aircraft position in dock. When passing the first sensor the aircraft sign and the green lights change to steady green.
5. At STOP position the red lights are lit and the display indicates STOP, and the centerline beacon is switched off.
6. If correctly parked OK shows on the display.
7. If coming too far the display indicates TOO FAR. The safety area is passed and push-back may be necessary.

VISUAL DOCKING GUIDANCE SYSTEM (SAFEDOCK)

A. DESCRIPTION

The docking system consists of a display unit and a laser unit to identify type and position of aircraft.

Ready to enter

Start of acft identification
 Turn RIGHT,
 52'/16m or more to stop

Turn RIGHT,
 46'/14m to stop

Turn LEFT,
 10'/3m to stop

On centerline,
 7'/2m to stop

At stop-position

B. DOCKING

Check that the correct aircraft type is displayed.
 The floating arrows indicate that the system is activated.
 Follow the Lead-in line.

When the two vertical closing rate fields turn yellow the aircraft is caught by the laser and being identified.
 Watch the red arrows in relation to the green centerline indicator for correct azimuth guidance.

When the aircraft is 52'/16m from the stop-position, the closing rate starts indication of "Distance to go" by turning off one pair of LED's for each 2'/0.5m the aircraft advances into the gate.

During approach into the gate, the aircraft will be identified. If, for any reason, identification is not made 39'/12m before the stop-position, the system will show "STOP" and "ID FAIL" and the azimuth guidance field will turn red. The aircraft will now be identified, and the docking can proceed.

When the correct stop-position is reached, the display will show "STOP" and the azimuth field will turn red. All yellow closing rate LED's will be switched off.

When the aircraft is correctly parked "OK" will be displayed after a few seconds.

If the aircraft has overshoot the stop position, "TOO FAR" will be displayed.

FMT AIRPARK SYSTEM

GENERAL

The system is based on an azimuth guidance unit, located in the extension of the gate centerline, in front of cockpit. Stop signal is provided from a stopping position indicator located, preferably, left of azimuth guidance unit.

1. Azimuth guidance unit shows a single vertical line when aircraft is on centerline.
If aircraft strays off centerline, the unit shows an arrow pattern indicating the direction to turn.
2. Proceed forward until stopping position indicator shows a single vertical line.
