General Information

Location: Malaga Esp
IATA Code: AGP
Lat/Long: N36° 40.5' W004° 29.9'
Elevation: 52 ft

Airport Use: Public
Magnetic Variation: 1.4°W

Fuel Types: 100 Octane (LL), Jet A-1
Customs: Yes
Airport Type: IFR
Landing Fee: Yes
Control Tower: Yes
Jet Start Unit: No
LLWS Alert: No
Beacon: No

Sunrise: 0731 Z
Sunset: 1716 Z,

Runway Information

Runway: 12
Length x Width: 9022 ft x 148 ft
Surface Type: asphalt
TDZ-Elev: 44 ft
Lighting: Edge, ALS, Centerline, TDZ

Runway: 13
Length x Width: 10499 ft x 148 ft
Surface Type: asphalt
TDZ-Elev: 52 ft
Lighting: Edge, ALS, Centerline

Runway: 30
Length x Width: 9022 ft x 148 ft
Surface Type: asphalt
TDZ-Elev: 30 ft
Lighting: Edge, Centerline

Runway: 31
Length x Width: 10499 ft x 148 ft
Surface Type: asphalt
TDZ-Elev: 37 ft
Lighting: Edge, ALS, Centerline

- Malaga Approach Control 25.87

1. GENERAL

1.1. ATIS

ATIS Arrival 120.37

ATIS Departure 124.47

1.2. NOISE ABATEMENT PROCEDURES**1.2.1. GROUND ENGINE TESTING**

Engine performance testing higher than idle regime are forbidden at any stand in the apron. Clearance for engine performance testing at any regime will be requested to the executive on duty (Tel: +34 952 048 808), who will deny or approve clearance, indicating the procedure to be followed.

1.3. LOW VISIBILITY PROCEDURES (LVP)**1.3.1. GENERAL**

LVP for take-off will be applied when the measured RVR or visibility in the manoeuvring area is 500m or below.

RWY 13/31 is authorized for take-off in low visibility conditions. During LVP, RWY 12/30 will not be used.

Pilots will be informed about the application of LVP via ATIS.

Any notified or detected incident that may affect the LVP, will be immediately communicated to ACFT and ATC. Tower will supply RWYs in use THR RVR directly. ATC will inform about the cancellation of LVP when RVR or VIS is MIM 1000m during at least 5 min and TREND forecast METAR in force, or in force soon, with VIS higher than 1000m.

1.3.2. GROUND MOVEMENT**1.3.2.1. GENERAL**

While LVP are applying taxiing of only one ACFT at a time on manoeuvring area will be authorized with the following exception:

With RWY 13 in use the simultaneously guided taxiing of an ACFT on TWY A and the guided taxiing of another ACFT out of apron 8 or 9 via TWY D, L or Q until stop bar Q1 will be authorized. When TWY A is free and ATC clearance is granted ACFT continues taxiing after Follow-me car heading to threshold RWY 13.

Pilots will proceed to verify the ACFT position at every moment especially in the intersections, checking that taxiing is being executed under total safety conditions. In case of being disoriented or in doubt, pilots will stop the ACFT and immediately notify ATC.

During LVP, following measures will be taken:

TWY B between TWYs L and Q is not usable as TWY on apron.

Entry and Exit of parking positions with Follow-me car.

1.3.2.2. ARRIVAL

ACFT that have already landed shall leave by the end of RWY and will notify "RWY vacated" when leave critical area (via HS-3/HN-3) as per RWY in use, when pilot begin to see all lights green after alternate series light green and yellow.

Landing ACFT, after indicating "RWY vacated" will stop at corresponding stop bar A1 (RWY 13 in use) or A3 (RWY 31 in use) and wait for arrival of a Follow-me car.

Pilots shall inform Tower of "Follow-me in sight" and shall not begin taxiing until clearance from Tower to taxi and follow Follow-me car to assigned stand is granted.

1. GENERAL**TAXI ROUTING**

Apron	Stand	RWY 13 in use	RWY 31 in use
1	all	HS-3, A1, A, G-1A	HN-3, A3, A, G-1A
2	all	HS-3, A1, A, G-2 or G-1 or direct entry to stand	HN-3, A3, A, G-2 or G-1 or direct entry to stand
3	all	HS-3, A1, A, G-3, R3	HN-3, A3, A, G-3, R3
4	all	HS-3, A1, A, G-4, R4	HN-3, A3, A, G-4, R4
5	all	HS-3, A1, A, G-5, R5	HN-3, A3, A, G-5, R5
6	31 thru 35	HS-3, A1, A, G-8, R6A	HN-3, A3, A, G-8, R6A
	37	HS-3, A1, A, G-8, R6A	HN-3, A3, A, G-7
	42 thru 54	HS-3, A1, A, G-8, G-9, G-10 (the nearest), B	HN-3, A3, A, G-8, G-9, G-10 (the nearest), B
	54	HS-3, A1, A, G-10, L	HN-3, A3, A, G-10, L
7	all	HS-3, A1, A, G-11, G-12, G-13 (the nearest), R7 (A-B-C-D)	HN-3, A3, A, G-11, G-12, G-13 (the nearest), R7 (A-B-C-D)
8	all	HS-3, A1, A, G-10, L, R8	HN-3, A3, A, Q, D, L, R8 or HN-3, A3, A, G-10, L, R8
9	all	HS-3, A1, A, G-10, L, R9C	HN-3, A3, A, Q, D, L, R9C or D, R9A-B (the nearest to stand), R9C

1.3.2.3. DEPARTURE

Pilot will request clearance for engine start-up notifying the stand position.

Departing ACFT, independently of origin apron, will be guided by marshaller to TWY A next to threshold of RWY in use:

With RWY 13 in use, marshaller will guide ACFT to TWY Q intersection, with RWY 31 in use to TWY HS-1 intersection.

ACFT which are departing and need to return to apron, notify ATC and wait for taxiing instructions.

Access to RWY 13/31 will be carried out preferably by HN-3 or HS-3, according to RWY in use, being forbidden access by E-1 and E-3 via E-6.

TAXI ROUTING

Apron	Stand	RWY 13 in use	RWY 31 in use
1	all	G-1A, A, A3, HN-3	G-1A, A, A1, HS-3
2	all	G-2 or G-1 or direct exit to A, A3, HN-3	G-2 or G-1 or direct exit to A, A1, HS-3
3	all	R3, G-3, A, A3, HN-3	R3, G-3, A, A1, HS-3
4	all	R4, G-4, A, A3, HN-3	R4, G-4, A, A1, HS-3
5	all	R5, G-5 or G-6, A, A3 HN-3	R5, G-5 or G-6, A, A1 HS-3
6	31 thru 35	R6A, G-8, A, A3, HN-3	R6A, G-8, A, A1, HS-3
	37	G-7, A, A3, HN-3	G-7, A, A1, HS-3
	42 thru 54	R6B, G-8, G-9, G-10 (the nearest), A, A3, HN-3	R6B, G-8, G-9, G-10 (the nearest), A, A1, HS-3
	54	L, G-10, A, A3, HN-3	L, G-10, A, A1, HS-3
7	all	R7 (A-B-C-D), G-11, G-12, G-13 (the nearest), A, A3, HN-3	R7 (A-B-C-D), G-11, G-12, G-13 (the nearest), A, A1, HS-3
8	all	R8, L, D, Q, Q1, A, A3, HN-3 or L, G-10, A, A3, HN-3	R8, L, G-10, A, A1, HS-3
9	71 thru 99	D, Q, Q1, A, A3, HN-3	D, L, G-10, A, A1, HS-3
	70 thru 92	R9C, R9A or R9B (the nearest), D, Q, Q1, A, A3, HN-3	R9C, L, G-10, A, A1, HS-3

1. GENERAL

1.3.3. COMMUNICATION FAILURE

Whenever an ACFT operating in the manoeuvring area experiences a communications failure, it must comply as follows:

Departing ACFT:

- If ACFT is taxiing with marshaller guidance, Tower will contact marshaller to guide ACFT back to stand.
- If ACFT is taxiing to holding position and marshaller has left the manoeuvring area, ACFT will continue via assigned taxi route until stop at ATC clearance limit, extreme caution. ACFT will keep position and wait for Follow-me car to be guided back to stand.

Arriving ACFT that has just landed will leave RWY via TWY HN-3 or HS-3 to corresponding stop bar on TWY A (A3 or A1 according to RWY in use) and wait for Follow-me car to be guided to assigned stand.

1.4. TAXI PROCEDURES

TWYs B between R-6A and L, R-6A up to stand 35, R-6B and R-6C MAX wingspan 171'/52m.

TWYs R-6A from stands 31 to 35 and R-8 from stands 60 to 66 MAX wingspan 118'/36m.

Oversteering procedure required for ACFT type D & E on twy G-3, G-4, G-5, G-7, G-8, G-9, G10 and G-11.

Oversteering procedure required for ACFT type E on twy G-6, G-12 and G-13.

1.5. PARKING INFORMATION

Docking guidance system APIS available at Terminal 2.

Docking guidance system SAFEDOCK available at Terminal 3.

1.6. OTHER INFORMATION

Helicopter activity.

RWY 31 right-hand circuit.

Birds.

2. ARRIVAL

2.1. SPEED RESTRICTIONS

2.1.1. SPEED ADJUSTMENTS UNDER RADAR CONTROL

- MAX 250 KT at or below FL120.
- Reduce to 210 KT at the beginning of final turn to intercept the ILS LOC course, when ACFT is located within 20NM of THR.
- 180 KT when crossing 12 NM from THR.
- 160 KT when crossing GM Lctr.
- ACFT with cruising speed lower than mentioned above shall maintain cruising speed up to the adjusting fix concerned.

ACFT will be exempt from carrying out these speed limits, when a continuous descent arrival is being performed, but not with those explicitly shown on some IACs.

2.2. NOISE ABATEMENT PROCEDURES

2.2.1. REVERSE THRUST

Reverse thrust other than idle is not allowed, except for safety reasons, between 2200-0600LT.

2. ARRIVAL

2.3. RWY OPERATIONS

2.3.1. GENERAL

Vacate RWY 12 only by using TWY E-8, E-9, E-10, E-11 and HE-1.

Vacate RWY 13 only by using TWY E-4, E-2, E-1 or HS-3.

Vacate RWY 31 only by using TWY E-3, E-5, E-6 or HN-3.

2.3.2. MINIMUM REDUCED SEPARATION ON THE SAME RWY

A landing ACFT will not be permitted to cross the beginning of the RWY on its final approach until the following minimum reduced separation exists:

ACFT with 5670kg Weight or over:

Landing following departure: The preceding departing ACFT has taken-off and is, at least, at 2000m from THR.

Light ACFT under 5670kg Weight:

Landing following landing: The preceding ACFT has just landed and is, at least, at 1500m from THR and in motion.

Landing following departure: The preceding departing ACFT has taken-off and is, at least, at 1500m from THR.

Such minima shall only be applied between SR and SS and under following conditions:

- Wake turbulence separation minima shall be maintained.
- While visual meteorological conditions (VMC) prevail in the aerodrome.
- When braking action is not adversely affected by RWY contaminants (slush, water, etc.).
- When the involved ACFT operate normally.

When issuing the landing clearance according to this procedure the following instructions shall be used: "... (ACFT call sign) BEHIND LANDING/DEPARTING (ACFT type) CLEAR TO LAND RUNWAY (number)".

2.3.3. MINIMUM RWY OCCUPANCY TIME

Commensurate with the ACFT safety and standard operation, pilots are reminded that rapid exit from the RWY enables maximum RWY utilization, lessens its occupancy time and minimizes occurrence of 'go-arounds'.

They will exit the RWY by the rapid exit TWY and will hold position before entering the parallel TWY where they will wait for ATC instructions.

Unless ATC indicates a specific rapid exit TWY, ACFT will vacate the corresponding RWY by the following rapid exit TWYs:

RWY	Rapid Exit	ACFT
12	E-8	light
12	E-9	all
12	E-10	all
13	E-4	light
13	E-2	all
13	E-1	all
31	E-3	light
31	E-5	all
31	E-6	all

Military ACFT:

RWY	Rapid Exit	ACFT
13	E-M	all
31	E-3*	light
31	E-5*	all
31	E-6*	all

* and wait for ATC clearance.

3. DEPARTURE

3.1. START-UP & TAXI PROCEDURES

3.1.1. START-UP

In case of wingspan is 171' / 52m or above, pilot will report that it is an code E/F ACFT on requesting start-up clearance.

3.1.2. TAXIING

Access to RWY 13/31 TWY HN-3 or HS-3 shall be preferably used, whenever only one ACFT is operating, according to the RWY in use.

3.2. RWY OPERATIONS

3.2.1. MINIMUM RWY OCCUPANCY TIME

ATC will consider that every ACFT at the holding position is able to commence the line-up on the RWY and the take-off roll immediately after take-off clearance is issued.

Pilots unable to comply with this requirement shall notify ATC before reaching the holding position.

1. The published minimum altitudes integrate no correction for low temperatures.
2. This chart should only be used for cross-checking of assigned altitudes while under radar control.

VISUAL DOCKING GUIDANCE SYSTEM SAFEDOCK**GENERAL**

The system contains information about azimuth guidance (shows the aircraft position with relation to the centerline of the parking area) and distance to the stop position (based on a laser radar measurement), that is provided by a display unit, in front of the cockpit.

DISPLAY UNIT

Consists of:

- One alphanumeric presentation line of 4 characters, composed by yellow LED, which can indicate several information: AIRCRAFT TYPE, STOP, OK, TOO FAR, SLOW, WAIT TEST, ID FAIL and DOWN GRADE.
- One line with a unit of yellow LED and 2 units of red/yellow LED for indication of aircraft azimuth and stop indication.
- One column of 3 units of yellow LED in the center to indicate the distance to the stop position.

PILOT INSTRUCTIONS**GENERAL**

When the pilot is not sure about the information showed in the display unit, immediately stop the aircraft and obtain more information to proceed.

DOCKING START

When the system starts, it shows the flashing message: WAIT TEST.

CAPTURE

When the system is working in capture way, looking for the approaching aircraft, the system shows vertical floating arrows. In the first line of the display unit will show the AIRCRAFT TYPE. If the system does not show vertical arrows in movement and an aircraft type like the approaching aircraft, the pilot must not enter into the stand point area.

**MONITORING**

When the aircraft has been captured by the laser, the floating arrows are substituted by the yellow indicator in the centerline. A flashing red arrow shows the pilot the direction of turn in order to line-up along the stand edge. If the system does not show the direction arrows, it means the aircraft is over the centerline.

**APPROACH RATE**

When the aircraft is less than 52'/16 m from the stop point, the approach rate is shown by one LED line turn-off from the centerline each 2'/0.7 m covered when the aircraft moves until the stop position.

SPEED REDUCTION

If the aircraft speed exceed 3.5 m/sec, the unit display indicates SLOW; the entry speed must be reduced.

REACHING STOP POINT

When the correct stop point is reaching, the display unit shows STOP and red light bars turns on.

DOCKING FINISHED

When the aircraft is parked, the display unit shows OK.

EXCEEDED

When the aircraft exceeds the stop point, the display unit shows TOO FAR.

WAIT

When the detected aircraft is lost during the docking routine, 39'/12 m before the STOP point, the display unit will show WAIT. The routine will continue when the system detects the aircraft again.

ADVERSE METEOROLOGICAL CONDITIONS

When the system visibility is reduced due to any reason, the display unit will show DOWN GRADE. As soon the system identifies the aircraft, the display unit will show the rate approach bar in order to continue the docking routine.

The pilot must not exceed the boarding bridge unless the message DOWN GRADE had been substituted by the rate approach bar.

VISUAL DOCKING GUIDANCE SYSTEM APIS**GENERAL**

The system contains information about azimuth guidance (shows the aircraft position with relation to the centerline of the parking area) and distance to the stop position (based on a laser radar measurement), that is provided by a display unit in front of the cockpit.

DISPLAY UNIT

Consists of:

- Two alphanumeric presentation lines of 4 characters, composed by yellow fluorescent indicators, which can indicate several information: Aircraft type, stand position ("STND"), number of flight, origin, destination, planned hour, occupied position ("BON"-Block on) and occupation hour, chocks on ("CHCK ON"), "SLOW DOWN", "STOP OK", "TOO FAR", emergency stop ("ESTP STOP"), connection to 400 Hz ("400 H") and/or airconditioned ("PCA") and connection hours.
- Azimuth guidance display sub-unit with centerline indicator (centered guidance and design of deviation arrows): yellow fluorescent.
- Distance indicator to the stop position: 4 dashboards composed by yellow and black fluorescent lines organized in a vertical column.

**PILOT INSTRUCTIONS**

Check that the indicated aircraft type is the appropriate.

Taxiing in: Watch centerline guidance.

If the acft speed exceeds 3m/sec, the unit display indicates "SLOW DOWN"; the entry speed must be reduced.

Check that the distance indicator is completely yellow.

The distance indicator is activated at 53'/16.2m before the stop position changing gradually from yellow to black lights.

At the stop position the distance indicator shows completely black and "STOP" will appear in the upper presentation line. If the parking is correct, it shows "OK".

If the acft exceeds 3'/1m from the stop position the indicator will show "TOO FAR" and push-back may be necessary.
