Airport Information For LEVC

Terminal Charts For LEVC

Revision Letter For Cycle 01-2014

Change Notices

Notebook

General Information

Location: Valencia Esp
IATA Code: VLC
Lat/Long: N39° 29.4' W000° 28.9'
Elevation: 240 ft

Airport Use: Public
Magnetic Variation: 0.3°W

Fuel Types: 100 Octane (LL), Jet A-1
Repair Types: Minor Airframe, Minor Engine
Customs: Yes
Airport Type: IFR
Landing Fee: Yes
Control Tower: Yes
Jet Start Unit: No
LLWS Alert: No
Beacon: No

Sunrise: 0723 Z
Sunset: 1653 Z,

Runway Information

Runway: 12
Length x Width: 10548 ft x 148 ft
Surface Type: asphalt
TDZ-Elev: 240 ft
Lighting: Edge, ALS, Centerline

Runway: 30
Length x Width: 10548 ft x 148 ft
Surface Type: asphalt
TDZ-Elev: 195 ft
Lighting: Edge, ALS, Centerline
Displaced Threshold: 984 ft

1. GENERAL

1.1. ATIS

ATIS 121.07

1.2. NOISE ABATEMENT PROCEDURES

For additional depiction refer to 10-4.

1.2.1. REVERSE THRUST

The use of reverse power from the idle regime is not allowed from 2300-0700LT except for safety reasons, in this case communicate with tower immediately.

1.2.2. RUN-UP TESTS

Run-up tests higher than idle regime are allowed H24 at qualified motor tests areas.

The request of run-up test clearance in any regime type and any question about the test procedure must be addressed to:

Centro de Operaciones

Tel: 34-961 598 535

Fax: 34-961 598 537

1.3. LOW VISIBILITY PROCEDURES (LVP)

1.3.1. GENERAL

LVP will be applied when RVR for RWY 30 and general visibility in the movement area, for RWY 12 (or also for RWY 30, without RVR) is 500m or below.

LVP will finish when RVR is above 800m during 10 min at least and an improvement tendency is expected.

Pilots will be informed about application of LVP by Tower.

Pilots will verify the ACFT position at every moment and taxi under total safety conditions. In case of being disoriented or in doubt, pilots will stop the ACFT immediately and notify Tower.

Enter RWY 12 via TWY H8, RWY 30 via TWY H1.

Departing ACFT have to take extreme CAUTION to avoid detours.

1.3.2. TAKE-OFF

The movement of only one ACFT at the same time will be cleared.

1.4. TAXI PROCEDURES

During failure of twy centerline or edge light with consequent loss of guidance, pilots will stop taxiing, contact ATC and wait for Follow-me vehicle.

TWYs H1 and H2 simultaneous use is available for ACFT type C or lower.

TWY N1 MAX wingspan 171'/52m.

TWY INNER I11 MAX wingspan 213'/65m.

TWY INNER I12 MAX wingspan 49'/15m.

TWY INNER I13 MAX wingspan 171'/52m unless specifically authorized by the APT management.

TWY INNER I14 MAX wingspan 79'/24m.

TWY INNER I15 and I16 MAX wingspan 118'/36m.

TWY H5 taxiing is allowed from North to South, unless otherwise instructed by ATC.

TWY N2 between Gate C and intersection TWY H4 taxiing will not be allowed when ACFT is stopped on TWY H5 holding point. ACFT may leave RWY via gate C or gate D, as instructed by ATC, to continue taxiing to apron.

Turning from M1 to S1 and vice versa will be carried out only by ACFT CAT C or lower.

ACFT crossing RWY 30 from H1 to T1 and vice versa, will report RWY cleared when the RWY-holding position T1 or N1 is overshoot.

TWY INNER I13 is only available to access/exit to/from stands 101 to 106.

Collision avoidance with other ACFT or obstacles is a responsibility of pilots when taxiing on the apron and not visible from Tower.

1. GENERAL

1.5. PARKING INFORMATION

On stands 1 thru 6B, 22 thru 25, 40, 43, 44, 52 and 141 thru 145 push-back required.

On stand 25 ACFT with wingspan of 171'/52m or greater will nose to East.

On stands 34 and 35 push-back required, autonomous exit is allowed on low power regime, with prior supervision by marshaller, stands 36 and 37 must be vacant.

On stands 36 and 37 push-back required, autonomous exit is allowed on low power regime, with prior supervision by marshaller, stand 38 must be vacant.

On stand 41 push-back required, autonomous exit is allowed for ACFT with MAX wingspan of 98'/30m on low power regime, stands 39, 40 and 42 must be vacant.

On stand 42 push-back required, autonomous exit is allowed for ACFT with MAX wingspan of 98'/30m on low power regime, stands 41 and 43 must be vacant.

On stands 53, 54, 57 thru 60 and 101 thru 106 push-back required, autonomous exit is possible, when the stands adjacent to one occupied are vacated. Pilot may request TWR to accomplish this manoeuvre under his responsibility. As long as this manoeuvre is feasible it will be supervised by marshaller.

On stands C1 and C5 push-back required, when stand C3 occupied.

On stand C3 push-back required, when stands C1 and C5 occupied.

2. ARRIVAL

2.1. SPEED RESTRICTIONS

2.1.1. SPEED ADJUSTMENT UNDER RADAR CONTROL

- MAX 250 KT at or below FL 100.
- 220 KT when leaving IAF (CLS or MULAT).
- 180 KT when leaving IF or when completing the final turn.
- 160 KT when crossing the FAF/FAP. ACFT shall maintain this speed till 4 NM from THR.
- ACFT with cruising IAS lower than the before mentioned shall maintain cruising speed up to the adjusting fix concerned.

ATC shall be informed of the speeds that may be maintained, if unable to comply with the speed adjustments above.

ACFT will be exempt from complying with these speed limitations when performing an instrument continuous descent arrival (CDA) procedure.

2.2. TAXI PROCEDURES

ACFT shall report RWY cleared and expect taxiing instructions and parking position.

If no taxiing instructions have been received, the ACFT, after vacating the RWY, shall stop at the end of the exit TWY segment and expect instructions from Tower or Follow-me car.

3. DEPARTURE

3.1. PUSH-BACK & TAXI PROCEDURES

ACFT must be ready for towed push-back or taxiing within the next 5 min to the approved start-up time; pilots will contact ATC otherwise.
