Airport Information For LIMC

Terminal Charts For LIMC

Revision Letter For Cycle 01-2015

Change Notices

Notebook

General Information

Location: Milan Ita
IATA Code: MXP
Lat/Long: N45° 37.8' E008° 43.4'
Elevation: 768 ft

Airport Use: Public
Magnetic Variation: 1.9°E

Fuel Types: Jet A-1
Customs: Yes
Airport Type: IFR
Landing Fee: Yes
Control Tower: Yes
Jet Start Unit: No
LLWS Alert: No
Beacon: Yes

Sunrise: 0706 Z
Sunset: 1556 Z,

Runway Information

Runway: 17L
Length x Width: 12861 ft x 197 ft
Surface Type: asphalt
TDZ-Elev: 745 ft
Lighting: Edge, ALS, Centerline
Displaced Threshold: 3094 ft

Runway: 17R
Length x Width: 12861 ft x 197 ft
Surface Type: asphalt
TDZ-Elev: 764 ft
Lighting: Edge, Centerline, REIL

Runway: 35L
Length x Width: 12861 ft x 197 ft
Surface Type: asphalt
TDZ-Elev: 714 ft
Lighting: Edge, ALS, Centerline, TDZ
Displaced Threshold: 1329 ft

Runway: 35R
Length x Width: 12861 ft x 197 ft
Surface Type: asphalt
TDZ-Elev: 708 ft
Lighting: Edge, ALS, Centerline, TDZ

Communication Information

- ATIS 121.625 Departure Service
- ATIS 120.025 Arrival Service
- Malpensa Ground North Tower 121.825
- Malpensa Tower 128.35
- Malpensa Tower 119.0
- Malpensa Ground West Ground Control 121.9
- Malpensa Clearance Delivery 120.9
- Milan Radar Approach Control 134.175
- Milan Radar Approach Control 132.7
- Milan Radar Approach Control 126.75
- Milan Radar Approach Control 125.625
- Milan Radar Approach Control 118.8

1. GENERAL

1.1. ATIS

ATIS Arrival 120.02

ATIS Departure 121.62

1.2. NOISE ABATEMENT PROCEDURES

1.2.1. GENERAL

ACFT classified according to ICAO Annex 16, Volume I, Chapter 2 are not allowed to use APT except in case of emergency.

In this case, take-off is allowed from RWY 17R only. Use of a different RWY will be authorized in case of adverse meteorological conditions or safety reasons only.

1.2.2. REVERSE THRUST

The use of reverse thrust at power higher than idle is allowed only in the event of proven safety/operational reasons.

1.2.3. RWY USAGE

RWY utilization will be selected by ATC according to the following wind components:

- MAX 10 KT steady and measured tail wind component.

When the RWY selection by ATC is considered not suitable for the operation desired, pilots may request permission to use a different RWY.

In such case the ACFT may be subject to delay.

1.2.4. RWY USAGE AT NIGHT

Between 2330-0630LT RWY 35L must be used for landing and RWY 17R must be used for take-off.

When RWY 17R is not available for safety reasons, meteorological conditions and delays of more than 20 MIN, RWY 35L will be used for take-off.

If RWY 35L/17R is closed, RWY 35R will be used for take-off.

1.2.5. RUN-UP TESTS

Engine tests other than engine pre-flight tests are not allowed. Additional engine tests may be approved on request and shall not last for more than 10 MIN during period SR-SS.

1.2.6. AUXILIARY POWER UNIT (APU)

Use of APU is allowed 5 MIN before STD but only to start-up engines.

In case of extraordinary reasons APU can be used; however this operation shall be limited to the shortest time.

If ground generator units are not available at the aerodrome, APU can be started up to 60 MIN before STD and switched off 20 MIN after arrival.

The term ground generator unit is intended to mean the power supply and air-conditioning units associated with the finger.

1. GENERAL

1.3. LOW VISIBILITY PROCEDURES (LVP)

For LVP taxi routings refer to 10-9 charts.

1.3.1. GENERAL

LVP will be applied to all flight operations, when

- RVR at TDZ is less than 550m;
- RVR is less than 400m;
- ceiling is below 200';
- rapid deterioration of weather conditions recommends so.

Pilots will be informed by ATIS or RTF when LVP are in force.

Pilots wishing to conduct CAT II/III approaches and landing for training purposes shall inform ATC in advance.

If all or part of the manoeuvring area cannot be visually monitored from TWR, a reduced capacity can be expected.

When LVP are in place, RWYs shall be used as follows:

- RWY 35R only for take-off;
- RWY 35L only for landing.

1.3.2. GROUND MOVEMENT

Single RWY operations

RWY 35L

- Arriving ACFT directed to Terminal 1 shall vacate the RWY only via TWY L, TWY EW or TWY BW.
- Arriving ACFT directed to Terminal 2 shall vacate the RWY only via TWY EM or TWY BE.
- Departing ACFT coming from Terminal 1 shall use GW CAT I/II/III holding position.
- Departing ACFT coming from Terminal 2 shall use GE CAT I/II/III holding position, only via TWY C.

RWY 35R

- Arriving ACFT directed to Terminal 1 shall vacate the RWY only via TWY D or TWY E.
- Arriving ACFT directed to Terminal 2 shall vacate the RWY only via TWY E, TWY AB or TWY AA.
- Departing ACFT coming from Terminal 1 shall use CA CAT II/III holding position.
- Departing ACFT coming from Terminal 2 shall use CA CAT II/III holding position, only via TWY C.

ACFT shall report to Tower as soon as they vacate ILS-sensitive area and when assigned stand has been reached.

Movement from/to apron GA

Arriving traffic must vacate RWY 35L via TWY BW (EW only at ATC discretion), then proceed to GA apron via TWY W.

Departing ACFT shall use TWY W to leave GA apron.

Follow-me assistance is mandatory to and from GA apron.

SMR (Surface Movement Radar) failure

In the event of complete SMR failure:

- when LVP are in force, the only RWY in use is 35L;
- when RVR is less than 400m, ground movements are limited to one ACFT at a time;
- on the aprons Follow-me assistance is mandatory.

1. GENERAL

1.3.4. CONTINGENCIES

Radio failure on the manoeuvring area:

Whenever an ACFT experiences a radio failure on the manoeuvring area, shall operate as follows:

- Departing ACFT: He shall continue taxiing, along the assigned route, to the clearance limit position, paying particular attention in avoiding any diversion; in this position, he shall wait for the follow-me to go back to his parking stand.
- Arriving ACFT: After vacating RWY and sensitive areas on the appropriate TWY, he shall maintain position and wait for the follow-me assistance to reach the parking stand.

The above applies in all cases, without exceptions, provided that all APT operations shall be suspended with SMR inoperative.

State of emergency and/or accident:

Whenever a state of emergency or accident occurs, Tower shall instruct all ACFT taxiing on the manoeuvring area to report and maintain their position.

Tower shall give maximum priority and assistance to the rescue means, according to the APT Emergency Plan.

1.4. SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM

1.4.1. OPERATION OF MODE S TRANSPONDER WHEN ACFT IS ON GROUND

1.4.1.1. ACFT EQUIPPED WITH MODE S TRANSPONDER

From either push-back or taxi request, whichever is earlier:

- Enter through the FMS or transponder control panel:
 - Flight Identification as specified in item 7 of ICAO flight plan form; or
 - In the absence of Flight Identification, the ACFT Registration;
- Select XPDR or its equivalent depending on the specifications of the installed model;
- Select AUTO mode, if the function is available;
- Do not select the OFF or STAND BY functions;
- Set the Mode A code assigned by ATC.

After landing until at a stand:

- Select XPDR or its equivalent depending on the specifications of the installed model;
- Select AUTO mode, if the function is available;
- Do not select the OFF or STAND BY functions;
- Maintain the Mode A code assigned by ATC.

On the movement area:

- Select XPDR or its equivalent depending on the specifications of the installed model;
- Select AUTO mode, if the function is available;
- Do not select the OFF or STAND BY functions;
- Set Mode A code to 1000.

1.4.1.2. ACFT NOT EQUIPPED WITH MODE S TRANSPONDER OR WITH UNSERVICEABLE MODE S TRANSPONDER

Departing ACFT maintain Mode A + C transponder OFF until line-up.

Arriving ACFT set the Mode A + C transponder to OFF as soon as the RWY is vacated.

On the movement area maintain Mode A + C transponder OFF for all the duration of displacement.

1.4.1.3. WARNING

TCAS should be selected before entering the RWY, after receiving line-up clearance and should be deselected after vacating the RWY.

1. GENERAL

1.5. RWY OPERATIONS

1.5.1. RWY 17R/35L CROSSING PROCEDURES

ACFT which are required to cross RWY 17R/35L will be issued instructions which will include a taxi clearance limit, in which the ACFT will be required to hold short of the RWY, by:

- the Ground Movement Controller, if taxiing out from the aprons.
- the Air Controller responsible for operations on RWY 17L/35R, if landed on RWY 17L/35R.

When approaching the clearance limit specified in the taxiing instructions, the ACFT will be instructed to change frequency to that of the Air Controller responsible for operations on RWY 17R/35L.

After crossing RWY and having reported 'RWY vacated' with the Air Controller, the ACFT will be instructed to change frequency to that of the appropriate Controller.

1. GENERAL

1.6. TAXI PROCEDURES

1.6.1. GENERAL

TWY AA to be used for vacating RWY 17L/35R or for departure RWY 17L with aerodrome operative in CAT I.

TWY GS MAX wingspan 78'/24m and must be used with follow-me assistance when proceeding to GA apron.

TWY AB to be used for vacating RWY 17L/35R or for departures from intersection take-off AB RWY 17L with aerodrome operative in CAT I.

Apron TWY C and Apron TWY N MAX wingspan 118'/36m.

TWY K MAX wingspan 200'/61m while code F ACFT taxiing on TWY W.

TWY GH available for engine test only.

For code F ACFT use of TWYs refer to 10-9 charts.

Use TWY P with minimum thrust only.

A380 ACFT shall keep outer engines on idle power except on TWY BE, BW and H.

1.6.2. TWY PREFERENTIAL USE

For the description of TWY preferential use the following terms are employed:

- "IN" to indicate the TWY used to reach the apron;
- "OUT" to indicate the TWY used to leave the apron.

Apron West:

- TWY W used as TWY "IN";
- Apron TWY K and apron TWY Y used as TWY "OUT".

Apron North:

- Apron TWY A and B used as TWY "IN";
- Apron TWY C used as TWY "OUT".

Heavy ACFT:

- Approaching RWY 35R shall conduct the landing in order to clear the RWY via TWY E;
- Approaching RWY 35L shall conduct the landing in order to clear the RWY via TWY EM, if directed to Apron North and via TWY EW if directed to Apron West.
- In order to reduce acoustic pollution, HEAVY ACFT shall perform line-up and take-off from RWY 35L using TWY GW/GE.

In order to reduce acoustic pollution, MD80 and MD90 shall perform line-up and take-off from RWY 35L using TWY GW or GE.

TWY DB shall be used by landed ACFT proceeding Apron TWY R, S and T (for S and T holding at W6).

TWY DA and L shall be used by ACFT proceeding to Apron TWY N, P and R (for R holding at W7). ACFT coming from TWY BW will be given W10 as clearance limit. ACFT coming from TWY EW will be given W9 as clearance limit.

1.7. PARKING INFORMATION

Stands 108, 401 thru 413, 501 thru 513 and 601 thru 613 equipped with docking guidance system.

On stands 101 thru 117, 302, 304, 307, 309, 312, 314, 317, 319, 392, 394, 395, 396, 401, 402, 404 thru 406, 408 thru 413, 495, 499, 501 thru 513, 595, 599, 601 thru 625, 701 thru 718 and 851 thru 863 push-back required.

On stands 301, 303, 305, 306, 308, 310, 311, 313, 315, 316, 318 and 320 power-back required.

1. GENERAL

1.8. OTHER INFORMATION

1.8.1. GENERAL

RWYs 35L and 35R right-hand circuit.

Birds on the manoeuvring area and surroundings.

1.8.2. USE OF HOLDING BAY/POSITIONS

Holding bays/positions CF1, CF2, CH1 and CH2 usable with APT operating in CAT I. CF2 is usable DAY only and may be used as isolated parking position for CAT E ACFT.

In this case movements on TWYs CF and FE are not allowed.

CH1 and CH2 available for ACFT with MAX wingspan of 118'/36m and MAX length of 153'/46.5m and usable DAY only.

Holding bays/positions 794, 795, 901, GH1 and K1 available for self-manoevring ACFT with APT operating in CAT I and DAY only.

K1 available for ACFT with MAX wingspan of 213'/65m.

Z1 available for ACFT with MAX wingspan of 118'/36m.

901 and GH1 used for engine test.

2. ARRIVAL

2.1. SPEED RESTRICTIONS

Unless otherwise instructed by ATC pilots must comply with following speed control:

- 270 KT at or below FL250 within area defined by following points:
GEN-PIA-ORI-MARCO-ABESI-CANNE-ODINA-AKASU-PIMOT-TOP-LAGEN-GEN.
- 230 KT at or below FL100.
- 210 KT at VERCE/RIGON points or at 20NM from TDZ on straight-in approach RWY 35L/R.
- 180 KT at 9NM from TDZ.
- 160 KT at 5NM from TDZ.

2.2. CAT II/III OPERATIONS

RWY 35L and 35R approved for CAT II/III operations; special aircrew and ACFT certification required.

2.3. RWY OPERATIONS

2.3.1. GENERAL

RWY 35L preferential for code F ACFT landing.

2.3.2. MINIMUM RWY OCCUPANCY

Arriving ACFT are expected to vacate not beyond the following TWYs:

Arriving RWY	ACFT	going to	TWY
17L	Heavy	see 2.4.1. Taxi Routine	CA
17L	Medium/Light	see 2.4.1. Taxi Routine	CB
35L	All	Apron North	EM
35L	Heavy	Apron West	EW
35L	Medium/Light	West	DA
35R	Heavy	see 2.4.1. Taxi Routine	E
35R	Medium/Light	Apron North	E
35R	Medium/Light	Apron West	D

If unable to comply, inform ATC.

2. ARRIVAL

2.4. TAXI PROCEDURES

2.4.1. TAXI ROUTINE

2.4.1.1. RWY 17L

If going to apron North via TWY C.

If going to apron West via:

- TWY C - TWY FE or TWY C - TWY CF (hold short RWY 17R/35L);
- TWY GE (hold short RWY 17R/35L).

2.4.1.2 RWY 17R

If going to apron North via:

- TWY FE - TWY C (then as instructed);
- TWY FE - TWY CF - TWY C (then as instructed);
- TWY GE - TWY C (then as instructed).

If going to apron West via:

- TWY F (then as instructed);
- TWY WB (then as instructed);
- TWY GW (then as instructed).

2.4.1.3. RWY 35L

If going to apron North via TWY EM - B.

If going to apron West via:

- TWY EW - TWY W;
- TWY DA - L (then as instructed);
- TWY DB (then as instructed).

2.4.1.4. RWY 35R

If going to apron North via TWY A.

If going to apron West via:

- TWY E - TWY EM (hold short RWY 17R/35L);
- TWY D - TWY DE (hold short RWY 17R/35L);
- TWY D - TWY DM (hold short RWY 17R/35L);
- TWY H (ATC discretion).

2.5. OTHER INFORMATION

WARNING: ACFT taxiing independently on TWY H underneath short final RWY 35L.

2.5.1. GENERAL

During SRN VOR unavailability all radial values referred to SRN VOR for published SID STAR and approach procedures can be intended as bearings referred to SRN LCTR of same value.

During TZO VOR unavailability all radial values referred to TZO VOR for published transition segment to enroute can be intended as bearings referred to TZO NDB of same value.

Arriving traffic is requested to provide MALPENSA Tower with indication of distance on final at first contact.

2.5.2. RADAR SEPARATION ON FINAL APPROACH

A minimum of 3NM Radar Separation will be provided between ACFT established on the same LOC course RWY 35L/35R (with additional longitudinal separation as required for wake turbulence).

2. ARRIVAL

2.5.3. "LANDING AFTER" PROCEDURE RWY 35R

Land After Procedure is implemented with the following prescriptions:

When two successive ACFT are in sequence to land, the second one may be allowed to land before the first one has vacated the RWY in use.

This procedure may be applied only during daylight provided that:

- The RWY is dry and free of any kind of precipitation;
- The second ACFT has been informed and is able to see the first ACFT, continually, until it has vacated the RWY.

When applying Land After Procedure, ATC will not issue a landing clearance.

ATC will give to the second ACFT the instruction to land after the preceding ACFT using the following phraseology: "(CALL SIGN) Land After (ACFT TYPE) landing on RWY 35R." Responsibility for ensuring adequate separation between the two ACFT rests with the pilot of the second ACFT including respect of prescribed wake turbulence separation.

2.5.4. PARALLEL ILS APPROACHES TO RWY 35L AND 35R

2.5.4.1. CONDITIONS

Dependent parallel approaches may be conducted to parallel RWYs provided that:

- Radar service is operative;
- ILS equipment is operative on both RWYs and the ACFT are making ILS approaches;
- ACFT are advised that approaches are in use to both RWYs; this information may be provided through the ATIS.

2.5.4.2. SEPARATION

A minimum of 1000' vertical separation or a minimum of 3NM radar separation will be provided between ACFT during turn-on to parallel LOC courses.

The minimum radar separation between ACFT established on a LOC course will be:

- 3NM between ACFT on the same LOC course (with additional longitudinal separation as required for wake turbulence);
- 3NM between successive ACFT on adjacent LOC course.

Radar service will terminate when one of the following occurs:

- Visual separation occurs;
- The ACFT reports the approach lights or RWY in sight;
- The ACFT has been instructed to contact MALPENSA Tower.

3. DEPARTURE

3.1. APT COLLABORATION DECISION MAKING (A-CDM) PROCEDURE

3.1.1. GENERAL

APT Collaborative Decision Making (A-CDM) is an operational procedure to improve air traffic management through a better information sharing among all involved stakeholders. This new procedure increases efficiency and punctuality by improving air traffic flow and APT capacity management, reducing delays by improving events' predictability and optimizing resources utilization.

One of the main objectives of A-CDM is the evaluation of the "Target Take-Off Time" (TTOT) as thoroughly as possible in order to improve the "en-route" and "sector" planning by the European ATM; this can be reached by implementing a series of "DPI" (Departure Planning Information) sent to NMOC and a series of "EFD" (ETFMS Flight Data Messages) received by NMOC. Therefore APT CDM can be considered as the basis for connecting the APT to ATM system.

3.1.2. PRINCIPAL DEFINITIONS

SOBT (Scheduled Off-Block Time):	In a coordinated APT the APT slot is assigned to a flight in a definite period.
TOBT (Target Off-Block Time):	Time when the ACFT is estimated to be ready to move (doors closed, boarding bridge/stairs removed, push-back vehicle available and ready to start up), according to information from flight operational process evolution.
TSAT (Target Start-Up Approval Time):	Time, computed on TOBT, when the startup Clearance can be obtained by MALPENSA Tower, based on local constraints and CTOT allocation.
TTOT (Target Take-Off Time):	Time, computed first on TOBT and later on TSAT, when ACFT is expected to take off from Malpensa with its impact on the network.

3.1.3. SOBT AND EOBT

Three hours before EOBT and after receiving the ATC Flight Plan from ENAV systems, the A-CDM platform compares the EOBT with the APT slot, as updated by ETD messages sent by the airline, if any. In case of inconsistencies between the APT slot and EOBT, it will be possible to view the expected alarms on the A-CDM platform.

The airline is responsible to check the compliance of the Flight Plan EOBT and the APT slot and to monitor alarms on A-CDM platform.

3.1.4. TOBT

TOBT is automatically calculated by A-CDM platform when the linked incoming flight enters in LIMM FIR (Milan ACC) or, for originating flights only, at EOBT -2h.

Once the TOBT has been issued, AO/GH are responsible for its accuracy and it should be updated for changes of +/- 5 minutes. In case of discrepancy of more than 15 minutes between TOBT and EOBT, AO/GH shall send a delay message (DLA) to NMOC. In this case the A-CDM platform generates an alarm. For other changes to the flight plan, the airlines shall send a CHG message.

TOBT can be updated by AO/GH without limitations until TSAT issue (TOBT-40 minutes). Thereafter it can be updated up to a maximum of 3 times; otherwise the flight is removed by the pre-departure sequence and, when a new TOBT is input, it is rescheduled with lower priority.

TOBT is cancelled if the ACFT is not READY within TOBT.

TOBT has to be cancelled by AO/GH in case of lack of information on the reliability of the information included in the platform (e.g. ACFT with technical problems).

3. DEPARTURE

In case of TOBT cancellation, TSAT is cancelled too: AO/GH are responsible of the new TOBT input which shall be at least 5 minutes after the input clock time and/or from the previous value. The new TSAT will be given in accordance with the new TOBT.

Since TOBT plays a fundamental role in the APT process, the accuracy of the data is indispensable, both in terms of its reliability and of timeliness of the communication in case of update.

3.1.5. TSAT

TSAT is calculated by ENAV system according to the TOBT and it is communicated to the AO/GH through the A-CDM platform. As for TOBT, also TSAT is updated for changes of +/- 5 minutes.

TSAT is issued at TOBT-40 minutes and takes into account, besides confirmed TOBT, those aspects of the ongoing situation at Malpensa APT (e.g. RWY in use) and those related to external factors dependent on the network (e.g. CTOT).

The start-up clearance by MALPENSA Tower will be in accordance with TSAT and the actual traffic situation.

3.1.6. TTOT

TTOT calculated from TOBT is the time when the ACFT is expected to take off basing on the expected ready communication given by AO/GH.

TTOT calculated from TSAT is the time when the ACFT is expected to take off basing on the ATC systems elaborations aimed to optimize the sequence at the holding point.

3.1.7. START-UP AND PUSH-BACK

The start-up clearance will take place after the READY and in accordance with the AMS procedure that is being defined.

Pilot-in-Command can ask for start-up authorization and clearance within TSAT +/- 5 minutes.

TWR Delivery will give the start-up authorization and the clearance taking into account TSAT and the actual traffic condition on the APT.

Push-back/taxi approval must be requested not later than 5 minutes after start-up authorization and start-up clearance (ASAT) and it shall start within 2 minutes from ASAT.

If the operations delays exceed the expected tolerance windows, the flight will be asked to re-contact AO/GH and input a new TOBT.

3. DEPARTURE

3.2. DE-ICING

De-icing/de-snowing takes place at following De-Icing Areas:

Area 1: Position 795 (MAX ACFT CAT F), K1 (MAX CAT E), 794 (MAX CAT D), 799 (MAX CAT C) and Z1.

Position 794 not available for B767-400 and MD-11 and not available when CAT F ACFT in stand 795.

Area 2: Position 791 thru 793 (MAX CAT C).

Area 3: Position 202 (MAX CAT E), 204 (MAX CAT D), 201 and 203 (both MAX CAT C).

De-icing operation H24.

Minimum standard taxi-time may increase in accordance to weather condition.

Responsibilities:

All de-icing/de-snowing operations are under AO/Pilot-in-Command responsibility.

Procedures:

AO/Pilots of ACFT shall put request to de-icing provider through ramp agent attending the flight.

Pilot at start-up will report to Tower to have agreed upon previously de-icing operations.

For Area 1 (Main Area) expect Tower instructions to Y1 or K2 holding positions. After that, taxiing to de-icing areas with follow-me car.

Marshaller will guide ACFT to de-icing positions.

Pilot-in-Command shall report to Tower 'Ready to move' only after ground de-icing procedures have been completed.

ACFT Engines Status during Operation:

Twin-engine ACFT: Both on idle power.

Three-engine ACFT: Tail out, external idle power.

Four-engine ACFT: External out, internal idle power.

Prop ACFT: Propellers should be stopped.

3.3. START-UP AND TAXI PROCEDURES

3.3.1. APRON MANAGEMENT

Preflight data, ATC- and start-up clearance will be issued on MALPENSA Delivery.

Pilots must obtain taxi instructions and push-back approval on appropriate GROUND frequency.

Pilots shall request start-up clearance 5 min before ready to start engines, handling operations completed.

Further information concerning apron service could be provided on ATIS.

3.3.2. TAXI ROUTINE

RWY 35L coming from apron West via:

- TWY Y/K/W - TWY GW;
- TWY W - TWY WB;
- TWY Y/K - TWY Z - TWY WB;
- TWY U/V - TWY W;
- TWY U/V - TWY K.

RWY 35R coming from apron West via:

- TWY W/K - TWY Z - TWY H;
- TWY Y - TWY H;
- TWY U - TWY F (hold short of RWY 35L);
- TWY K - TWY GW or TWY Y - TWY GW (hold short of RWY 35L).

3. DEPARTURE

RWY 35L coming from apron North via:

- TWY C - TWY GE.

RWY 35R coming from apron North via:

- TWY C - TWY CA.

RWY 17R coming from apron West via:

- Apron TWY N, P and R then TWY W then TWY EW or TWY BW.

RWY 17R coming from apron North via:

- TWY BE or TWY EM.

RWY 17L coming from apron West via:

- TWY W - TWY BW (hold short RWY 35L, then as instructed);
- TWY W - TWY EW (hold short RWY 35L, then as instructed);
- TWY U - TWY F (hold short RWY 35L, then as instructed);
- TWY K/Y - TWY G/W (hold short RWY 35L, then as instructed);
- TWY W/K - TWY Z - TWY H - TWY C (hold short RWY 35L, then as instructed);
- TWY Y - TWY H - TWY C (hold short RWY 35L, then as instructed).

3.4. NOISE ABATEMENT PROCEDURES

3.4.1. RUNWAY USAGE

During trial period RWYs 35L/R are in use according to following schemes:

- First day:
 - between 0630-1430LT: RWY 35L;
 - between 1430-2330LT: RWY 35R.
- Second day:
 - between 0630-1430LT: RWY 35R;
 - between 1430-2330LT: RWY 35L.

A daily alternation of schemes 'First day' and 'Second day' shall be applied, meaning that if on one day the applied scheme is 'First day' the next day will be 'Second day', and vice-versa.

A tolerance of +/- 10 min is allowed to the established time for RWY change to permit the management of ground operations by the tower. When RWY 35L/R is in use, take-off from RWY 17L/R is allowed, but subject to ATC delay.

"First day" scheme 2014			
JAN 01	FEB 02	MAR 02	APR 01
MAY 01	JUN 02	JUL 02	AUG 01
SEP 02	OCT 02	NOV 01	DEC 01

"Second day" scheme 2014

3. DEPARTURE

The above alternate use of the RWYs may not be applied for safety (e.g. operational or meteorological) or security reasons.

Exceptionally, two flexible windows for take-off from both RWYs, according to final destination and traffic congestion peaks forecast, can be applied for max 120 min under previous Civil Aviation Authority approval.

The alternate use of RWYs above is based on a principle of equal distribution of the ACFT on the two RWYs. The application of a compensation mechanism, under provision of the Civil Aviation Authority and after NOTAM issue, may change for short periods the time of change of the RWYs in use.

Except from what is stated above, the RWY use scheme is mandatory. Any request for different use must be approved by ENAC at least two hours in advance.

Due to daily periodic inspections RWYs 17/35 are closed at certain times. Expect short time alterations due to traffic congestion.

During take-off climb, standard noise abatement procedures established by operators in compliance with manufacturer technical documentation must be applied.

During the initial climb phase, pilots shall maintain the following parameters:

- a) Up to 1500' QFE
 - take-off power;
 - take-off flap;
 - climb at $V_2 + 10/20$ KT or as limited by body angle.
- b) At 1500' QFE
 - reduce thrust and climb at $V_2 + 10/20$ KT until reaching 3000' QFE.
- c) At 3000' QFE
 - accelerate smoothly to enroute climb speed with flap retraction.

RWYs 17L/R

Noise abatement procedures shall be applied until passing 4000'.

Initial climb procedures shall be performed using the maximum rate of climb compatible with the ACFT performances until passing at least 5000'.

3.5. RWY OPERATIONS

3.5.1. GENERAL

A380 should use RWY 35L for take-off.

Multiple line-ups on RWY 17R/35L from intersection take-off positions can be given to not more than 2 ACFT at the same time under the following conditions:

- Daylight only;
- Visibility 5km or more;
- Not between intersection take-off WB and full length RWY 35L;
- Pilot's readback shall contain RWY designator, intersection take-off position, if applicable, and departure sequence.

3.5.2. MINIMUM RWY OCCUPANCY

As far as possible, pre-flight checks shall be completed before line-up; other checks after line-up shall be carried out as quickly as possible.

Departing ACFT shall comply with ATC clearance to line-up without any delay.

Take-off run shall start immediately after take-off clearance. If unable to comply, pilots shall inform Malpensa TWR prior to line-up.

In case of snow, take-off run shall start immediately after take-off clearance issued by ATC. ACFT unable to comply will be instructed to vacate RWY as soon as possible.

3.6. OTHER INFORMATION

To reduce communication load, take-off time will not be given unless upon pilot's request.

VISUAL DOCKING GUIDANCE SYSTEM (SAFEGATE)

A. SYSTEM DESCRIPTION

The docking system consists of a display unit in front of parking position and a number of sensors in the apron surface. **On the display the left-hand pilot gets the correct alignment as well as the closing-rate and stop information.**

B. ACTIVATED SYSTEM

1. The system is ready when:
 - the bottom pair of green lights are blinking
 - the aircraft type is shown (blinking) on the upper information block
 - the stopbarlights are shown
2. The pilot should be aware that the correct type of aircraft is shown before using the system.

C. CENTERLINE GUIDANCE

Centerline guidance is obtained by means of an illuminated bar in front of an aircraft symbol. The aircraft is on centerline when bar and symbol overlap each other.

VISUAL DOCKING GUIDANCE SYSTEM (SAFEDOCK Type 3)

Check that the correct aircraft type is displayed.
The scrolling arrows indicate that the system is activated.

Follow the lead-in line.

When the solid yellow closing rate field appears, the aircraft has been caught by the scanning unit. The scanning unit checks the correct aircraft type and the display provides azimuth guidance information.

The flashing red and solid yellow arrows provide azimuth guidance information. The flashing red arrow shows the direction to steer, while the solid yellow arrow indicates how far the aircraft is off of the centerline.

39'/12m from the stop-position the closing rate field starts the indication of "Distance to go" by turning off one row of LEDs for each one half meter the aircraft advances towards the stop-position.

When the correct stop-position is reached all yellow closing rate field LEDs will be off, "STOP" and two red rectangular fields will appear on the display.

When the aircraft is correctly parked "OK" will be displayed after a few seconds.

If the aircraft has overshot the stop-position "T-FAR" (too far) will be displayed.

The aircraft must be verified at least 39'/12m before the correct stop position. If this does not occur, the system displays "STOP" with two red, rectangular fields being lit in the azimuth guidance area of the display. While the aircraft is stopped, the system will attempt to verify it. If successful, the docking procedure will continue. If an unverified object is found in the scanning area during docking, the system will show "WAIT". When the object has disappeared the procedure will be resumed.
