Notebook

General Information

Location: Vienna Aut
IATA Code: VIE
Lat/Long: N48° 06.6' E016° 34.2'
Elevation: 600 ft

Airport Use: Public
Magnetic Variation: 3.8°E

Fuel Types: 100 Octane (LL), Jet A-1
Customs: Yes
Airport Type: IFR
Landing Fee: Yes
Control Tower: Yes
Jet Start Unit: No
LLWS Alert: No
Beacon: No

Sunrise: 0644 Z
Sunset: 1515 Z,

Runway Information

Runway: 11
Length x Width: 11483 ft x 148 ft
Surface Type: bitu
TDZ-Elev: 575 ft
Lighting: Edge, ALS, Centerline

Runway: 16
Length x Width: 11811 ft x 148 ft
Surface Type: bitu
TDZ-Elev: 597 ft
Lighting: Edge, ALS, Centerline, REIL, TDZ

Runway: 29
Length x Width: 11483 ft x 148 ft
Surface Type: bitu
TDZ-Elev: 600 ft
Lighting: Edge, ALS, Centerline, REIL, TDZ

Runway: 34
Length x Width: 11811 ft x 148 ft
Surface Type: bitu
TDZ-Elev: 586 ft
Lighting: Edge, ALS, Centerline, REIL

1. GENERAL

1.1. ATIS

D-ATIS Arrival **122.95**
(also available via phone: +43 (0)5 1703 / 6331)
D-ATIS Departure **121.72**
(also available via phone: +43 (0)5 1703 / 6332)

1.2. NOISE ABATEMENT PROCEDURES

According to the Austrian ordinance 'Zivilluftfahrzeug-Laermzulaessigkeitsverordnung ZLZV-2005' the following is applicable:

- Approaches and departures to/from Austrian civil aerodromes are only permitted to be performed by subsonic jet ACFT if the produced noise does not exceed the noise limits specified in Chapter 3 of ICAO Annex 16, Vol I.

1.3. LOW VISIBILITY PROCEDURES

Low Visibility Procedures become effective in the following conditions:

When TDZ RVR falls to less than 600m and/or ceiling lowers to less than 200', the following message will be passed to ACFT via RTF or ATIS: "Low Visibility Procedures in operation".

Only if instructed by ATC pilots shall report "RWY vacated" as soon as ACFT has left the yellow/green colour coded section of the exit TWY.

1.4. SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM

ACFT operators should ensure that ACFT transponders are able to operate when the ACFT is on ground.

Arriving ACFT shall squawk Mode S until reaching final parking position.

Departing ACFT shall select the assigned transponder code and squawk Mode S at push-back request or at taxi request **latest**.

Activation of Mode S transponder means selecting: AUTO, ON, XPNDR, or the equivalent according specific installation. Do **not** switch OFF or STDBY.

ACFT not equipped with Mode S shall squawk Mode A/C.

1.5. RWY OPERATIONS

1.5.1. HIGH INTENSITY RWY OPERATIONS (HIRO)

The HIRO system is valid from 0600 - 2300 LT unless otherwise advised by ATC (e.g. via ATIS). The HIRO system ensures a maximum RWY capacity, minimizes "go arounds" and enables departures during single RWY operations and continuous inbound traffic.

1.5.2. REDUCED RWY SEPARATION

1.5.2.1. GENERAL

Reduced RWY separation will be applied for RWYs 11, 16, 29 and 34 with 2400m separation.

ACFT will be classified as follows:

- CAT 1 ACFT:
Single engine propeller ACFT with MTOM of 2000kg or less.
- CAT 2 ACFT:
Single engine propeller ACFT with MTOM of more than 2000kg but less than 7000kg or twin engine propeller ACFT with MTOM of less than 7000kg.
- CAT 3 ACFT:
All other ACFT.

1. GENERAL

1.5.2.2. LANDING ACFT

Separation shall in no case be less than following minimums:

A succeeding landing CAT 1 ACFT may cross THR when preceding ACFT is a CAT 1 or 2 ACFT which either:

- has landed and passed a point at least 600m from THR, is in motion and will vacate RWY without backtracking, or
- is airborne and has passed a point at least 600m from THR.

A succeeding landing CAT 2 ACFT may cross THR when preceding ACFT is a CAT 1 or 2 ACFT which either:

- has landed and passed a point at least 1500m from THR, is in motion and will vacate RWY without backtracking, or
- is airborne and has passed a point at least 1500m from THR.

A succeeding landing ACFT may cross THR when preceding CAT 3 ACFT:

- has landed and passed a point at least 2400m from THR, is in motion and will vacate RWY without backtracking, or
- is airborne and has passed a point at least 2400m from THR.

1.5.2.3. DEPARTING ACFT

A CAT 1 ACFT may be cleared for take-off when preceding departing ACFT is a CAT 1 or 2 ACFT which is airborne and has passed a point at least 600m from position of succeeding ACFT.

A CAT 2 ACFT may be cleared for take-off when preceding departing ACFT is a CAT 1 or 2 ACFT which is airborne and has passed a point at least 1500m from position of succeeding ACFT.

An ACFT may be cleared for take-off when a preceding departing CAT 3 ACFT is airborne and has passed a point at least 2400m from position of succeeding ACFT.

1.5.2.4. WAKE TURBULENCE

The prescribed wake turbulence separation minimums have to be applied except:

- pilot of approaching ACFT announces that he is able to attend an appropriate distance himself, or
- pilot of departing ACFT reports after being questioned by Tower that he can avoid wake turbulence of preceding departed ACFT ("able to avoid...") e.g. possibility of a visual turn.

1.6. TAXI PROCEDURES

Obstacle clearance distance from centerline of TWY L, west of TWY W until EX14 is 139'/42.5m only. The obstacle clearance distance on TL34 and TL35 is 131'/40m on each side.

Wait for marshaller before entering taxilane for all positions on GA Apron. Marshalling with follow-me car on Main Apron on pilots request.

In order to meet the requirement for wing-tip clearance, follow strictly the taxi guidance lines.

TWYs P, Q, TL31, TL32, TL33, TL39 and TL41 MAX wingspan 118'/36m.

TWY L West of EX14 MAX ACFT Code D.

TWY L between EX6 and EX13 MAX ACFT Code E .

For taxiing of ACFT with wingspan exceeding 118'/36m Follow-me guidance from intermediate holding position W1, W2 or W3 to final parking position via TL40 is mandatory.

Pilots of long-wheelbase ACFT such as B777-300 and A340-600 shall exercise CAUTION during turns as main gear to pavement edge clearance may be limited.

For those ACFT oversteering technique is required.

1. GENERAL

1.7. PARKING INFORMATION

On stands A91 thru A99, B71 thru B74, C31 thru C42, D21 thru D29, F01 thru F37, H41 thru H45, H50 and K41 thru K51 push-back required.

Stands C31 thru C42, D21 thru D29 and F01 thru F37 equipped with Docking Guidance System.

2. ARRIVAL

2.1. SPEED RESTRICTIONS

2.1.1. LOW DRAG - LOW POWER APPROACH

Comply with any speed adjustments by ATC as promptly and as accurately as operationally possible. If unable to maintain an assigned speed due to meteorological or operational reasons advise ATC.

If not otherwise advised, 250 KT has to be maintained below FL 100. If the cruising speed is less than 250 KT, cruising speed has to be maintained.

Latest 10NM from THR, speed has to be reduced so as to reach 160 KT at 4NM Final. The approach shall be conducted in 'clean configuration' as long as possible.

If ceiling at APT is below 500' and/or ground visibility is less than 2000m this procedure is recommended only.

Pilots unable to comply with these speed assignments shall inform ATC accordingly.

2.2. NOISE ABATEMENT PROCEDURES

ACFT below FL 150 will normally be cleared to achieve a continuous descent to the RWY in use.

2.3. CAT II/III OPERATIONS

RWYs 16 and 29 approved for CAT II/III operations, special aircrew and ACFT certification required.

2.4. RWY OPERATIONS

2.4.1. HIGH INTENSITY RWY OPERATIONS (HIRO)

Expeditious exit from the landing RWY allows ATC to separate ACFT with the appropriate separation minimum (radar separation 2.5NM or separation minimum according wake vortex category) during final approach.

To reduce the RWY occupancy time pilots should make use of the following procedure:

- As a rule RWYs shall be vacated via rapid exit TWYs.
- Good operating practice is to aim for an exit that can be made, rather than aiming for an earlier one, just to miss it and roll slowly to the next.
As far as practicable, the RWY should always be vacated via the most appropriate rapid exit TWY for your ACFT type.

2. ARRIVAL

ACFT Category	TWY Designator			
	Distance			
	RWY 11	RWY 16	RWY 29	RWY 34
Heavy	A4	B10	A9	B5
				6365'/1940m
	7841'/2390m	6873'/2095m	7218'/2200m	B4
				7661'/2335m
Medium (Jet)	A6	B8	A7	B7
	6102'/1860m	5577'/1700m		5348'/1630m
	A8	B6	5479'/1670m	B5
	3839'/1170m	3986'/1215m		6365'/1940m
Medium (Turboprops)	A8	B6	A7	B7
	3839'/1170m	3986'/1215m	5479'/1670m	5348'/1630m
Light (Jet)	A8	B6	A7	B7
	3839'/1170m	3986'/1215m	5479'/1670m	5348'/1630m
Light	A8	B3	A5	B9
	3839'/1170m	3035'/925m	3084'/940m	3937'/1200m

To avoid stopping on rapid exit TWY after landing and vacating RWY 34 or RWY 16, join initially TWY D in direction North and continue further according ATC clearance.

If unable to comply with the HIRO system advise Tower as soon as possible.

2.5. TAXI PROCEDURES

ACFT shall vacate the RWY after landing without delay if not otherwise instructed.

Taxi clearance to apron or parking area will normally be issued by TWR when landing run is completed. If taxi clearance to apron or parking area has not been received at this time, ACFT shall vacate the RWY via the nearest TWY intersection and shall hold and wait on the TWY when entirely beyond the taxi holding position.

Follow-me guidance mandatory .

2.6. OTHER INFORMATION**2.6.1. COMMUNICATION FAILURE DURING MISSED APCH**

Squawk 7600.

In case of calm winds or winds from East, Southeast, South and Southwest (according METAR or FCST):

- After completion of the procedure proceed to WGM VOR and enter the holding.
- Perform IAP and land on RWY 16.

In case of winds from West, Northwest, North and Northeast (according METAR or FCST):

- After completion of the procedure proceed to BRK NDB and enter the holding.
- Descend to 3000'.
- Perform IAP and land on RWY 29.

3. DEPARTURE

3.1. DE-ICING

De-icing procedure available for ACFT on Main Apron and GA Apron:

- Report the necessity for de-icing either to your ramp agent or VIENNA Ice on 131.62 or APT extension 22050.
- ACFT on Main Apron without contracted de-icing ground staff shall forward fluid/mixture request to Ramp agent.

ACFT on GA Apron shall forward fluid/mixture request to GAC-officer (APT extension 22345).

- Report necessity for de-icing to ATC when ACFT is completely ready (doors closed, ready for start-up/push-back).

De-icing standby area: Stands E48 thru E99.

De-icing South: Stands F43, F47, F51, F53, F55, F57 and F59.

De-icing North: Stands F42, F44, F46, F48 and F50.

- ACFT cleared to the de-icing standby area approach stands from the South. Marshaller guidance on the area is provided.

If instructed by marshaller to stop on the de-icing standby area, do not cut engines. Intermediate stop only.

Thereafter marshaller guidance to de-icing South is provided.

- ACFT cleared to de-icing North approach stands via TL40.

Chemical de-icing is limited to a width of 131'/40m on RWYs and 49'/15m on TWYs.

For a de-icing request via DCL submit one of the following keywords in the optional free test field: DEICE, DE-ICE or ICE.

3.2. START-UP, PUSH-BACK & TAXI PROCEDURES

3.2.1. START-UP & PUSH-BACK

A routing clearance can be requested earliest 15 min prior to estimated off-block time. This can be done either digital via DCL or by voice with Delivery.

Engine start-up during push-back or towing shall be coordinated with push-back crew.

Push-back procedures are coordinated between ATC and push-back driver.

Start-up and push-back clearances are only issued on designated frequencies of WIEN Ground or Tower.

Pilot has to assure that boarding is completed and ground crew is ready, before such a clearance request.

After receiving a push-back clearance, push-back has to be commenced without delay to assure MAX amount of capacity.

3.2.2. TAXIING

ACFT taxiing out from stands F41 and F44 must follow exactly the centerline marking in TL38.

When taxiing out from stand F42 deviation to the West in TL38 is prohibited.

3.3. NOISE ABATEMENT PROCEDURES

The published SIDs are also noise abatement procedures.

Strict adherence is compulsory within the limits ACFT performance.

3. DEPARTURE

3.4. RWY OPERATIONS

3.4.1. HIGH INTENSITY RWY OPERATIONS

ATC will consider every ACFT at the holding point as able to commence line up and take-off roll immediately after clearance issued. Pilots not ready when reaching the holding point (no ACFT in front on the same TWY) shall advise ATC as early as possible. When cleared for take-off ATC will expect and has planned on seeing movement within 10 seconds (of take-off clearance being issued). Pilots unable to comply with this requirement shall notify ATC before entering the RWY. Wake vortex separation is applied by ATC in accordance with the published requirements.

If more separation than the prescribed minima is requested, pilots shall notify ATC before entering the RWY.

Pilots shall prepare and be ready to accept the following intersection take-off runs:

ACFT Category	TWY Designator			
	TORA			
	RWY 11	RWY 16	RWY 29	RWY 34
Medium/ Light	A10	B4	A3 (West)	B10
	9531'/2905m	7661'/2335m	9944'/3031m	6873'/2095m

To increase RWY capacity and to comply with slot times, ATC may reorder departure sequence at any time.

In addition intersections other than those prescribed above will be assigned.

Pilots unable to accept the reduced take-off runs from the assigned or above mentioned intersections shall inform ATC in time.

3.5. OTHER INFORMATION

3.5.1. DATALINK DEPARTURE CLEARANCE (DCL)

The successful transmitted clearance must be accepted and confirmed by the pilot within MAX 10 min.

In case of any discrepancies, unavailability of data or data errors, the pilot has to revert to voice communication.

3.5.2. APT COLLABORATIVE DECISION MAKING (A-CDM)

3.5.2.1. INTRODUCTION

CDM is part of the European program "Single European Sky" to optimize airspace and APT operations. By direct interaction with Eurocontrol network management a more efficient use of airspace and a reduction of enroute delays can be achieved.

A-CDM is about partnership at APTs between APT Ops, ATC, ACFT operators, slot coordinator and ground handlers.

Emphasis is put on:

- Linking inbound, turn-round and outbound processes;
- Sharing of information between partners;
- Improved flight operational data exchange between APTs and ATFM network.

Procedure period of time includes ATC flight plan submission (EOBT -3 hours at the earliest) until take-off.

3.5.2.2. CDM PROCEDURES

Flight Plan Check

ATC flight plans will be checked with regard to their APT slot - Scheduled Off-Block Time (SOBT). If they do not correspond, contact address will be informed together with request to coordinate times.

Filing and updating a flight plan is and remains the responsibility of the ACFT operator. He may delegate these tasks to his accredited handling agent.

3. DEPARTURE

TOBT-TSAT Procedure

TOBT (Target Off-Block Time) represents the time that an ACFT operator or handling agent estimates that an ACFT will be ready, all doors closed, boarding bridge removed, push-back vehicle available and ACFT ready to start-up immediately.

ACFT operator is responsible for correctness of and adherence to TOBT, but may delegate this responsibility to the handling agent or another airline.

As an ACFT operator you have the following options on the announcement of TOBT:

- Input by the ACFT operator/dispatch entering the TOBT via the ISP (Information Sharing Platform). The login can be requested on the following email address: cdm@viennaairport.com;
- Handling Agents;
- VAH (Vienna Aircraft Handling);
- Self-Service (authentication ticket for one time).

TSAT (Target Start-up Approval Time) is issued by ATC and represents the time at which an ACFT can expect start-up, taking into account the ATFM restrictions and local constraints. ATC sequences departures based on TOBT.

TSAT will be calculated from TOBT -30 min onwards. After a TSAT has been issued the TOBT should be corrected up to a MAX of 3 times. Changes to TOBT do not affect TSAT in general, as long as newly calculated TOBT is not later than TSAT. However it is of the utmost importance that a TOBT reflects the potential readiness of the ACFT, since it is the basis for determination of TSAT.

TOBT adaptations shall be done as soon as possible. It is still mandatory to send a delay message to the IFPS if EOBT deviates by 15 min or more.

TSAT Dialogue

TSAT will be notified

- via airline or handling agent (via Information Sharing Platform, ISP);
- for general aviation flights either via handling agent or at general aviation counter at General Aviation Terminal (GAT);
- as part of digital ATC clearance.

Start-up and Push-back

Clearances for start-up and push-back are given in accordance with TSAT.

Following rules apply:

- On reaching TOBT, ACFT must be ready for start-up;
- Start-up can be requested at TSAT +/-5 min;
- ATC will approve start-up taking into account TSAT and current traffic situation.

RADAR MINIMUM ALTITUDES

Alt Set: hPa Trans level: By ATC Trans alt: 5000'

This chart may only be used for cross-checking of assigned altitudes whilst under RADAR control.

CHANGES: Sectors & altitudes revised.

© JEPPESEN, 2007, 2015. ALL RIGHTS RESERVED.

ARRIVAL INSTRUCTIONS

CLEARANCE PHRASEOLOGY FOR RNAV TRANSITIONS

"Cleared xxx Transition": Authorization to fly the lateral transition. Altitude assignments will be issued by ATC. (TERRAIN CLEARANCE ASSURED BY ATC)

"Cleared xxx Transition and Profile": Authorization to fly the transition as published, including the vertical constraints depicted on the procedure.

"Cleared direct Waypoint xxx": Authorization to fly from the present position direct to a waypoint and continue thereafter on the appropriate transition to the runway in use. Altitude assignments will be issued by ATC.
(TERRAIN CLEARANCE ASSURED BY ATC)

COMMUNICATION FAILURE PROCEDURES

1. FLIGHTS ABLE TO PERFORM RNAV TRANSITION

If rwy in use is known proceed in accordance with the lateral and vertical description of the RNAV transition (with suffix K, L, M or N) to the final approach of the rwy in use.

While performing the RNAV transition, descend from the last cleared level to the minimum descent altitudes in accordance with the vertical description of the RNAV transition (refer to charts 10-2F to 10-2N), perform IAP and land on the rwy in use.

If the rwy in use is NOT known choose the following procedures according weather forecast or actual weather report:

- in case of calm winds or winds from SOUTHEAST, SOUTH & SOUTHWEST proceed according RNAV transition (with suffix L) to the relevant IAP of Rwy 16; while performing the RNAV transition, descend from the last cleared level to the minimum descent altitudes in accordance with the vertical description of the RNAV transition (refer to charts 10-2G & 10-2L); perform IAP and land on Rwy 16.

- in case of winds from NORTHWEST, NORTH or NORTHEAST proceed according RNAV transition (with suffix N) to the relevant IAP of Rwy 34; while performing the RNAV transition, descend from the last cleared level to the minimum descent altitudes in accordance with the vertical description of the RNAV transition (refer to charts 10-2J & 10-2N); perform IAP and land on Rwy 34.

2. FLIGHTS UNABLE TO PERFORM RNAV TRANSITION

In case of calm winds or winds from EAST, SOUTHEAST, SOUTH & SOUTHWEST (according METAR or forecast) proceed at the last cleared level to WGM and enter the holding, descend to 5000' (QNH according METAR or forecast), perform IAP (ILS: intercept ILS out of WGM holding 5000') and land on Rwy 16.

In case of winds from WEST, NORTHWEST, NORTH & NORTHEAST (according METAR or forecast) proceed at the last cleared level to BRK and enter the holding, descend to 3000' (QNH according METAR or forecast), perform IAP and land on RWY 29.

VISUAL DOCKING GUIDANCE SYSTEM (SAFEGATE) PIER EAST AND PIER WEST

ROUTINE DOCKING MANOEUVRE

1. Check that the correct aircraft type is displayed.
2. The "floating" arrows indicate that the system is activated.
3. Follow lead-in line.
4. When the vertical closing rate field turns to steady yellow the aircraft is caught by laser.
5. Watch the red and yellow arrows for azimuth guidance, yellow arrows on both sides of the yellow centerline indicate the correct azimuth guidance.
6. When the aircraft is 39'/12m away from the stop position, the closing rate information indicates the distance to go by turning off one row of LEDs per 2'/0.5m. All yellow closing rate LEDs will be switched off 2'/0.5m before STOP.
7. When the correct stop position is reached, the display will show "STOP" and the outer parts of the azimuth field will turn red.
8. When the aircraft is correctly parked "OK" will be displayed after a few seconds.
9. After fixing the front gear "CHOCK ON" will be displayed for the next 3 minutes.

EMERGENCY STOP: "STOP" with red indication left and right of azimuth guidance will appear on the display.

A: ALPHANUMERICAL

FORM OF DISPLAY	INDICATION FOR
Acft type	(preselected)
WAIT/VIEW/BLOCK	Not allowed object within scanning range - stand not usable
WAIT/GATE/BLOCK	Not allowed object within scanning range - stand not usable
SLOW DOWN	Taxiing speed too high
Acft type and SLOW	a) Bad weather conditions - visibility is reduced b) Acft lost during docking
STOP	Emergency stop
STOP/ID/FAIL	Identification failed - stop
STOP/SBU	Too far of centerline within last 7'/2m to stop position
STOP/TOO/FAST	Taxiing speed much too high - stop
STOP followed by OK	Correct stop position
TOO FAR	Acft has overshot the stop position (more than 3'/1m)
CHOCK ON	(disappears after 3 min)

B: AZIMUTH GUIDANCE

(Laser scanning technique) for use by the pilots occupying both the left and right seats

C: CLOSING RATE INFORMATION

Indicates the distance to stop position
