General Information

Location: Antalya Tur
IATA Code: AYT
Lat/Long: N36° 54.0' E030° 47.6'
Elevation: 177 ft

Airport Use: Public
Magnetic Variation: 4.8°E

Fuel Types: 100-130 Octane, Jet A-1
Repair Types: Minor Airframe, Minor Engine
Customs: Yes
Airport Type: IFR
Landing Fee: Yes
Control Tower: Yes
Jet Start Unit: No
LLWS Alert: No
Beacon: Yes

Sunrise: 0510 Z
Sunset: 1455 Z,

Runway Information

Runway: 18C
Length x Width: 11155 ft x 148 ft
Surface Type: concrete
TDZ-Elev: 176 ft
Lighting: Edge, ALS, REIL
Stopway: 197 ft

Runway: 18L
Length x Width: 11155 ft x 148 ft
Surface Type: concrete
TDZ-Elev: 176 ft
Lighting: Edge, ALS, Centerline, REIL, TDZ
Stopway: 197 ft

Runway: 18R
Length x Width: 9810 ft x 148 ft
Surface Type: asphalt
TDZ-Elev: 172 ft
Lighting: Edge, ALS, REIL
Stopway: 295 ft

Runway: 36C
Length x Width: 11155 ft x 148 ft
Surface Type: concrete
TDZ-Elev: 176 ft

Lighting: Edge, ALS, REIL
Stopway: 197 ft

Runway: 36L
Length x Width: 9810 ft x 148 ft
Surface Type: asphalt
TDZ-Elev: 176 ft
Lighting: Edge, ALS, REIL
Stopway: 295 ft

Runway: 36R
Length x Width: 11155 ft x 148 ft
Surface Type: concrete
TDZ-Elev: 160 ft
Lighting: Edge, ALS, Centerline, REIL, TDZ
Stopway: 197 ft

1. GENERAL

1.1. ATIS

ATIS Arrival 118.275
ATIS Departure 136.125

1.2. SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM

1.2.1. A-SMGCS UTILISING MODE S

ACFT operators should ensure that Mode S transponders are able to operate when ACFT is on the ground.

Flight crew should select XPNDR or equivalent according to specific installation, AUTO if available, not OFF or STDBY, and the assigned Mode A code.

From the request for push-back or taxi, whichever is earlier, after landing, continuously until ACFT is fully parked on stand, the Mode A code 2000 must be set before selecting OFF or STDBY.

Flight crew of ACFT equipped with Mode S having an ACFT identification feature should also set the ACFT ident.

This setting is the ACFT ident specified in item 7 of the flight plan.

ACFT ident should be entered from the request for push-back or taxi, whichever is earlier, through FMS or transponder control panel.

1.3. PREFERENTIAL RWY SYSTEM (PRS)

Announcement of PRS Operations in Progress by ATIS.

Preferential RWY for landing is RWY 36C and RWY 36R. Pilots unable to comply with PRS Operations for RWY 36C and RWY 36R shall notify ATC. This traffic may normally be subject to delay. Air crew must comply with the requirements announced by ATIS.

Preferential RWY for take-off is RWY 36C and RWY 36R. Pilots unable to comply with PRS Operations for RWY 36C and RWY 36R shall notify ATC when requesting start-up clearance. This traffic may normally be subject to delay.

PRS Operations shall be used when:

- Preferred RWY/RWYs is/are dry and tail wind component does not exceed 10 KT or;
- Preferred RWY/RWYs is/are wet and tail wind component does not exceed 5 KT.

When braking action for the preferred RWY/RWYs is less than "Good, Good, Good", RWY/RWYs to be used shall be selected so as to make landing and take-off into the wind. Besides, in case of landing within the tail wind limits, RWY shall be announced as "clear and dry" even if the RWY is dry, or breaking measurement data shall be released through ATIS.

It is the pilot's decision and responsibility to accept or refuse the use of preferred RWY/RWYs determined by ATC. If the pilot-in-command requests permission to use a RWY other than the preferred one for landing or take-off operations due to safety or performance reasons, this request will be met by ATC when it is available. In such cases, ACFT may be subject to delay. ATC shall notify pilots of delays expected to exceed 30 minutes.

1. GENERAL

1.4. MANDATORY IMPLEMENTATION OF RNAV (GNSS) SIDS AND STARS

RNAV (GNSS) SIDS AND STARS procedures are mandatory for P-RNAV approved ACFT which filed their FPL including one of PBN/D1-D2-O1-O2 equipped. Therefore, the P-RNAV approved ACFT arriving/departing to/from LTAI are required to flight plan or submit a change message (CHG) concerning the route section of their RPLs as described below.

1. GNSS based RNAV STARS for LTAI start from the waypoints/fixes HISAR, PIDEV, ADBEL, KULOL, GELKI, TOMBI, LORKO, NESIL, KOZLU, BABSA and EKSEN. These waypoints/fixes shall be the last element of the flight planned routes for the P-RNAV approved ACFT as illustrated below:
 - A flight planned route for the arrivals to LTAI via CRD;
EXAMPLE: CRD UR55 KOZLU
2. GNSS based RNAV SIDS for LTAI end at the waypoints/fixes HISAR, PIDEV, ADBEL, KULOL, GELKI, TOMBI, LORKO, EVBOL, NESIL and EKSEN. These waypoints/fixes shall be the first element of the flight planned routes for the P-RNAV approved ACFT as illustrated below:
 - A flight planned route for the departures from LTAI via HISAR;
EXAMPLE: HISAR UW77

1.5. PARKING INFORMATION

Parking stands 6 thru 19 are invisible from Tower. All pilots concerned are strictly advised to act in conformity with Tower instructions.

2. ARRIVAL

2.1. COMMUNICATION FAILURE PROCEDURE

2.1.1. RF FOR IFR FLIGHTS OUTSIDE TMA

Select transponder code 7600. Follow the flight plan route using last assigned and acknowledged FL. For 3 minutes execute relevant STAR. Then, descending 12000' proceed to LRA VOR. Descend to 3000' over LRA VOR and execute Instrument Approach Procedure (IAP) and land.

2.1.2. RF FOR IFR FLIGHTS INSIDE TMA

If available, call Antalya APP telephone number 0090 242 330 32 32.

Unless RWY for landing has previously been notified, the RWY to be used shall be 36R for direction 36 whereas 18L for direction 18.

ACFT at or above 12,000'

Select transponder code 7600. For 3 minutes execute last assigned and acknowledged ATC instructions. Then, descending 12,000' proceed to LRA VOR. Descend to 3000' over LRA VOR and execute Instrument Approach Procedure (IAP) and land.

ACFT below 12,000', at or above 3000'

Select transponder code 7600. Proceed to LRA VOR, descend or maintain last assigned and acknowledged altitude. Descend to 3000' over LRA VOR and execute Instrument Approach Procedure (IAP) and land.

Note: ACFT on downwind legs shall execute this procedure regardless of altitude or FL.

ACFT below 3000'

Select transponder code 7600. Proceed to relevant FAF and land.

2. ARRIVAL

2.2. GNSS BASED RNAV STARS

The altitudes/FLs depicted on the arrival procedures are for operational purposes. They do not represent permission to descend to those altitudes/FLs unless otherwise authorized by ATC.

When an arriving ACFT on a STAR is cleared to descend to an altitude/FL lower than the altitudes/FLs specified in a STAR, the ACFT shall follow the published vertical profile of a STAR, unless such restrictions are explicitly cancelled by ATC.

The cancellation of the level restrictions depicted on the STARs will be subject to the ATC clearance by the phrase:

"OPEN DESCEND TO... (ALT./FL.)".

2.3. CAT II OPERATIONS

RWY 36R approved for CAT II operations, special aircrew and ACFT certification required.

2.4. MINIMUM RWY OCCUPANCY TIME

During descent and approach briefings pilot-in-command should plan the TWY to be used to vacate the RWY in order to reduce RWY Occupancy Time. However, pilot should take into consideration that, if it is unable to exit via first TWY planned, vacate RWY directly via next TWY.

In all cases rapid exit TWYs should be preferred to vacate the RWY.

2.5. NOISE ABATEMENT

APU must be switched off within 5 minutes after parking.

3. DEPARTURE

3.1. START-UP PROCEDURES

Pilots of departing ACFT are reminded to contact ANTALYA Delivery for ATC clearance 10 minutes before start-up.

3.2. MINIMUM RWY OCCUPANCY TIME

Pilots, granted line-up clearance, must be ready to depart immediately after they receive take-off clearance. Pilot-in-command unable to comply with this requirement shall notify ATC, just after receiving the line-up clearance.

3.3. NOISE ABATEMENT PROCEDURES

APU is allowed to be switched on 15 minutes before estimated start-up.

For departures, any ACFT having compliance with the noise category ICAO Annex 16 Chapter 3 and 4 shall apply NADP-2 whereas all other ACFT whose noise categories are in compliance with ICAO Annex 16 Chapter 2 shall only apply NADP-1.

Pilots shall apply Noise Abatement Departure Procedure 1 or 2 (NADP-1 or NADP-2) which has been explained in ICAO Doc 8168 Vol 1 until passing 3000'.

3.4. GNSS BASED RNAV SIDS

When a departing ACFT on a SID is cleared to climb to an altitude/FL higher than the initially cleared altitude/FL or the altitudes/FLs specified in a SID, the ACFT shall follow the published vertical profile of a SID, unless such restrictions are explicitly cancelled by ATC.

The cancellation of the level restrictions depicted on the SIDs will be subject to the ATC clearance by the phrase:

"OPEN CLIMB TO... (ALT./FL.)".

RADAR MINIMUM ALTITUDES

ATIS
118.27

Apt Elev
177'

Alt Set: hPa Trans level: By ATC Trans alt: 15000'
1. RADAR required. 2. P-RNAV approval required otherwise advise ATC. 3. On downwind expect vectors to final. 4. At first contact with ANTALYA APP report only callsign, and report if unable to comply RNAV STAR. 5. Descend as cleared. 6. ATC may clear the aircraft direct to a waypoint published in a STAR. After reaching this waypoint, follow remaining part of STAR.

HISAR 1A [HISA1A] RWYS 36C/R RNAV ARRIVAL RNAV (GNSS)

SPEED RESTRICTION

- 200 KT on base leg/closing heading to final approach up to 12 NM to touchdown.
- 180 KT on final approach course within 12 NM to 6 NM to touchdown.
- 160 KT on final approach course within 6 NM to 4 NM to touchdown.

These speeds are for ATC purposes and are mandatory and have to be flown as accurately as possible. If unable to comply inform ATC and state what speed to be used.
