MUNICH, GERMANY
AIRPORT BRIEFING**1. GENERAL****1.1. ATIS**

*D-ATIS 123.12

1.2. NOISE ABATEMENT PROCEDURES

For additional depiction refer to 10-4 chart.

1.2.1. GENERAL

Pilots shall reduce noise disturbance caused by aircraft engines to an unavoidable minimum at MUNICH APT and its vicinity. This applies in particular to the times of night flying restrictions.

1.2.2. NIGHT FLYING RESTRICTIONS

From 2200-0600LT, flight operations are subject to the following restrictions for noise abatement reasons:

Restrictions regarding operating times:

Night flights are only permitted with the following provisions and with ACFT not exceeding the noise limits as stipulated by Annex 16 Section 3 of the ICAO Convention:

1.2.2.1. In commercial scheduled air service and charter service s

a) up to 28 scheduled flight movements in the period from

- 2200-2330LT for take-offs and landings and
- from 0500-0600LT for landings only.

Intercontinental flights shall have priority; in exceptional cases and if there is a particular traffic-related interest, such flights may be planned up to 2400LT.

b) Delayed landings and take-offs in the period from 2200-2400LT, provided the scheduled time of arrival or departure at or from MUNICH APT is planned before 2200LT or in the case of flight movements stated in paragraph 1.2.2.1., 1.2.2.2. and 1.2.2.3. before 2330LT and provided the arrival or departure is before 2400LT. Early landings in the period from 0500-0600LT, provided the scheduled arrival time is planned after 0600LT.

c) Flights by airlines whose ACFT are mainly maintained at MUNICH APT in the period from 2200-2330LT for all landings and for scheduled take-offs of flights in intercontinental traffic and from 0500-0600LT for take-offs for ferry flights (empty flights) and for landings in intercontinental traffic.

In exceptional cases and if there is a particular traffic-related interest, flights in intercontinental traffic may be planned up to 2400LT.

1.2.2.2. Scheduled take-offs or landings of ACFT that do not generate on average an individual noise level exceeding 75 dB(A) at any single noise measuring point in the vicinity of MUNICH APT, in the period from 2200-2330LT and from 0500-0600LT.

This regulation shall also apply with lower priority to passenger flights by airlines with ACFT with a maximum take-off weight of more than 12t, provided such flights are carried out regularly and are reported to the APT Coordinator of the Federal Republic of Germany the day before to the following address:

Flughafenkoordinator der Bundesrepublik Deutschland

60549 Frankfurt/Main

Tel. (069) 69 07 33 60

Telefax: (069) 69 05 08 11, SITA: FRAZTXH, AFTN: EDDFYHYX

EDDM/MUC
MUNICH

5 APR 13

JEPPesen
10-1P1MUNICH, GERMANY
AIRPORT BRIEFING**1. GENERAL**

1.2.2.3. Flights that are performed for services pursuant to para 4 No. 1 a PostG (Postal Act) dated 22nd December 1997 (Official Federal Gazette I, page 3294) or are carried out as surveying flights for the calibration of navigational aids from 2200-0600LT.

Exceptions:

Above stated restrictions regarding operating times do not apply to:

- Flights for providing assistance in emergencies and disasters and for executing police duties,
- Landings for meteorological, technical and other flight safety reasons,
- Flights that have been approved in justified exceptional cases by the "Bayerisches Staatsministerium fuer Wirtschaft, Verkehr und Technologie" or upon its instruction - by the Luftaufsicht at MUNICH APT, in substantiated individual cases to avoid serious disruptions to air traffic or in cases of special public interest.

Modified Bonus List:

Beginning with the summer flight plan 2002, take-offs and landings in the period from 2200-0600LT are only allowed with ACFT that are listed in the actual bonus list of the "Bundesministerium fuer Verkehr, Bau- und Wohnungswesen".

This list has been extended by the authorizing agency to include the ACFT types B737-600/700/800. Flights according to paragraphs 1.2.2.1 b) and 1.2.2.2. are exempt from this regulation. The authorizing agency reserves the Right to modify the list beginning in the year 2004.

1.2.3. RUN-UP TESTS

Validity of the engine test hangar regulations remains unaffected.

- Engine test runs for maintenance reasons are only permitted in the engine test hangar.
- The operating period of the engine test hangar is H24.
- In order to ensure compliance with the existing noise abatement conditions, facility restrictions may be imposed, if necessary.

Use of the engine test hangar shall always be announced via phone ext. 21131 to the FMG traffic centre, comprising the following data:

ACFT identification, period of use, expected time for towing and planned change of position.

ACFT shall not taxi under their own power into or out of the engine test hangar.

1.3. LOW VISIBILITY PROCEDURES (LVP) DURING CAT II/III OPERATIONS**1.3.1. GENERAL**

Whenever operation of CAT II/III LVP is announced, taxiing is restricted to TWYs with operating centerline lights for all ACFT.

TWY centerline lights within the ILS sensitive area from RWY 08R/26L towards TWY T and from RWY 08L/26R towards TWY M are colour-coded (yellow-green).

After landing pilots are requested to report vacating the colour-coded centerline lights to indicate that the ACFT has vacated the ILS sensitive area.

1.3.2. STOP BARS

Stop bars are installed at CAT II/III holding positions, TWY intersections, junctions and sections. Taxiing across stop bars is strictly prohibited when they are switched on. Clearances of any kind do not cover permission for taxiing across an operating stop bar.

1.3.3. GUIDANCE WITHIN AREA OF APRON CONTROL RESPONSIBILITY

Within area of Apron Control responsibility ACFT may be guided by means of segmented green TWY centerline lights, even if all-weather operations CAT II/III are not active. Unless otherwise instructed, taxiing is permitted for ACFT only on TWYs with operating centerline lights.

Taxi guidance lines to the parking positions are yellow-lighted.

Taxiing across operating red stop bars is not permitted.

AIRPORT BRIEFING

1. GENERAL

1.4. SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM**1.4.1. OPERATION OF MODE S TRANSPONDERS WHEN ACFT IS ON THE GROUND**

ACFT operators shall ensure that Mode S transponders are able to operate when the ACFT is on the ground.

Pilots shall select AUTO mode and assigned Mode A code.

If AUTO mode is not available, select ON (e.g. XPDR) and assigned Mode A code under the following conditions:

- From the request for push-back or taxi, whichever is earlier;
- After landing, continuously until the ACFT is fully parked on stand;
- When fully parked on stand, select STBY.

Whenever the ACFT is capable of reporting ACFT ident (i.e. callsign used in flight), the ACFT ident should also be entered from the request for push-back or taxi, whichever is earlier (through the FMS or the transponder control panel). ACFT crew shall use the format for entry of the ACFT ident as defined in item 7 of the ICAO flight plan (e.g. AFR6380, SAS589, BAW68PG).

To ensure that the performance of systems based on SSR frequencies (including airborne TCAS units and SSR radars) is not compromised, TCAS should be selected when approaching the holding point. It shall be deselected after vacating the RWY.

For ACFT taxiing without flight plan, Mode A code 2000 shall be selected.

1.5. TAXI PROCEDURES

On the aprons ACFT must taxi on or along yellow, blue or orange taxiing guidelines.

TWYs W1 orange and W1 blue, O1 orange and O1 blue and O3 orange and O3 blue
MAX wingspan 118'/36m.

1.6. PARKING INFORMATION

Visual Docking Guidance System available at stands 101, 102, 103, 104, 105, 107A, 107B, 108, 109B, 110, 111A, 111B, 112, 113A, 113B, 113X, 115A, 115B, 116, 117B, 118, 119, 120, 121, 131-135, 141-144, 151-155, 161-165, 181-189, 201-224, 231-234, 244-256, 301-302B, 308-313, 317-318B.

MUNICH, GERMANY

AIRPORT BRIEFING

2. ARRIVAL

2.1. SPEED RESTRICTIONS

MAX 250 KT below FL 100 or as by ATC. Not applicable within airspace C.

2.2. NOISE ABATEMENT PROCEDURES

2.2.1. REVERSE THRUST

When landing, reverse thrust other than idle thrust shall only be used to an extent necessary for safety reasons.

2.3. CAT II/III OPERATIONS

RWYs 08L, 08R, 26L and 26R are approved for CAT II/III operations, special air-crew and ACFT certification required.

2.4. RWY OPERATIONS

2.4.1. INDEPENDENT PARALLEL APPROACHES ON RWYs 08L/08R AND 26L/26R

Following the conditions and procedures described below, independent parallel approaches may be conducted for approaches on the parallel RWY system in all meteorological conditions:

- One approach radar system (ASR) is in operation.
- Both parallel ILS systems are in operation; or one of the two ILS systems is in operation while the localizer of the other is in operation.
- Radar separation of at least 3 NM, and/or 1000' vertical separation is maintained until both ACFT are stabilized on the localizer course within 25 NM.
- For radar vectoring to the Instrument Landing System (ILS), a course is allocated, showing an angle of not more than 30° to the localizer course.
- After a change of frequency to aerodrome control, the air-traffic controller at the aerodrome will take over the supervision of approaches with ASR until touchdown or until the pilot-in-command reports "aerodrome in sight".
- If the air-traffic controller ascertains deviations in one of the approaching ACFTs course which reduce the lateral separation, not only will the deviating ACFT be requested to perform an evasive manoeuvre, but also the ACFT on the parallel approach, even if the latter is flying on the correct final approach.

If the conditions under a) or b) no longer apply, radar and/or vertical separation will be provided immediately.

2.4.2. AVOIDANCE OF AN UNINTENDED CROSSING OF THE FINAL APPROACH COURSE WITH PARALLEL RWYS WHEN RADIO CONTACT IS TEMPORARILY IMPOSSIBLE

If an ACFT is on a radar vector which leads it to final approach course at an angle of 50° or less, or if ACFT has been cleared to a waypoint located on the final approach course, the pilot shall turn inbound to the final approach of the previously announced RWY and shall adhere to the cleared altitude/flight level, unless the pilot has been instructed by ATC clearance to cross final approach course.

2.4.3. AIR TRAFFIC HANDLING

2.4.3.1. USE OF RWYS

For arriving ACFT via ROKIL/LANDU, RWY 08L/26R will be basically assigned. For arriving ACFT via NAPSA/BETOS, RWY 08R/26L will be basically assigned. Pilots, whose flight is supposed to be positioned at the stand-groups 700/800/900 and hangar 1, 3, 4 should duly advise Approach Control. If traffic permits, these flights will be guided to RWY 08R/26L to avoid taxi delay on the ground.

2.4.3.2. FREQUENCY CHANGE

While being transferred from MUNICH Arrival to MUNICH Director, initial call shall be restricted to CALL SIGN only, in order to avoid frequency congestion. When RWY vacated, contact Ground.

EDDM/MUC
MUNICH

JEPPESEN
10 FEB 12 (10-1P4)

MUNICH, GERMANY
AIRPORT BRIEFING

2. ARRIVAL

2.4.3.3. HIRO HIGH INTENSITY RUNWAY OPERATIONS

To achieve the highest possible rate/hour for arrivals and departures, RWY occupancy times are to be reduced to a minimum.
RWYs shall be vacated via high speed turn-offs.

Whenever RWY conditions permit, the following or earlier high-speed turn-offs shall be used:

RWY	Acft	Turn off intersection	Dist from THR ft/m
08L	heavy	A10	7415' / 2260m
	medium (JET)	A8	5610' / 1710m
	medium (PROP) / light	A5	4167' / 1270m
08R	heavy	B10	7218' / 2200m
	medium (JET + PROP) / light	B7	5184' / 1580m
26L	heavy	B6	7283' / 2220m
	medium (JET)	B8	5446' / 1660m
	medium (PROP) / light	B11	3806' / 1160m
26R	heavy	A6	7218' / 2200m
	medium (JET + PROP) / light	A9	5184' / 1580m

Plan earlier high-speed turn-offs only if vacating RWY via these exits is assured.
Do not vacate via TWY A7 and/or B9 unless advised by MUNICH Tower!

In the interest of noise abatement, from 2200-0600LT arriving ACFT should leave the RWY during idle thrust via the high-speed turn-offs stated above or later.

It is recommended to name the respective high-speed turn-off during the approach briefing (cockpit).

2.5. TAXI PROCEDURES

ACFT shall establish radio contact with MUNICH Apron prior leaving area of ATC competency and taxi independently as instructed by MUNICH Apron to the position assigned.

Taxiing ACFT should not deviate from centerline marking and lighting, except when advised by the control unit.

2.6. OTHER INFORMATION

2.6.1. FUEL SAVING AND NOISE REDUCING ILS APPROACH PROCEDURES (CONTINUOUS DESCENT APPROACH - CDA)

2.6.1.1. GENERAL

For the purpose of fuel-saving and noise abatement during approach the following approach procedure is announced. It may be requested by the pilot or offered by the controller. It can be conducted only in connection with an ILS approach.

EDDM/MUC
MUNICH

JEPPesen
10 FEB 12 **(10-1P5)**

MUNICH, GERMANY
AIRPORT BRIEFING

2. ARRIVAL

2.6.1.2. PROCEDURE

ACFT will be guided by the approach control unit by means of radar vectoring and will be cleared for a continuous descent to the intermediate approach altitude in such a way that after reaching this intermediate approach altitude on the localizer course, about 1 NM will be left for intercepting the glide path in level flight. This intermediate approach segment will serve to reduce speed.

Intermediate approach altitude: 5000'. It is assumed that the continuous descent will be performed at a rate of 300 ft/NM (descent angle approx 3°), down to the cleared altitude.

If, for specific reasons (e.g. separation, airspace structure, obstacles), altitudes above the intermediate approach altitude have to be initially assigned, these restrictions will be lifted early enough to allow a continuous descent at a rate of 300 ft/NM.

Details about the distance from touchdown will be transmitted to the pilot together with the clearance for descent and usually at 20, 15 and 10 NM from touchdown. This should enable the pilot to correct the rate of descent as required.

In case of traffic situations allowing no CDA (e.g. approaches of ACFT with different performance data), pilots will be informed by the notice NO CDA POSSIBLE. In this case, approaches must be conducted according to the previous procedures.

2.6.1.3. NOISE ABATEMENT

On approaches in accordance with the CDA, pilots are also expected to use the approach techniques recommended for noise abatement in the vicinity of APTs (see AIR TRAFFIC CONTROL page GERMANY-1).

2.6.2. AIR TRAFFIC HANDLING

2.6.2.1. PROCEDURE

Arriving ACFT will be guided to final by radar vectoring or RNAV guidance (transitions/waypoints).

2.6.2.2. CLEARANCE LIMIT

With no further clearance issued, pilots have to consider the following clearance limits of the respective Standard Arrival Routes: ROKIL (via WLD), LANDU (via DIMGA and DINOG), NAPSA (via SBG) or BETOS (via DISUN).

2.6.2.3. HOLDING PROCEDURE

Expect holding overhead ROKIL/LANDU/TILGO and NAPSA according to the arrival route. RNAV-equipped ACFT are expected to enter published RNAV-holdings.

2.6.2.4. COMM FAILURE PROCEDURE

Only in the case of communication failure have pilots to proceed to the respective Initial Approach Fix MUN/MIQ, to hold overhead and execute a standard instrument approach following the published procedures.

Pilots already cleared for a RNAV-transition should follow the transition and execute a standard instrument approach to the respective RWY.

EDDM/MUC
MUNICH

MUNICH, GERMANY

AIRPORT BRIEFING

3. DEPARTURE

3.1. DATALINK DEPARTURE CLEARANCE (DCL)

DFS (Deutsche Flugsicherung GmbH) is offering to grant start-up and route clearance using Datalink. The procedures for this are described in an AIC.

Deviations from this and depending on the traffic and weather situation, the route clearance can be transmitted via Datalink in advance after receiving a RCD, while start-up clearance will be granted on the frequency listed in the CLD as the occasion arises.

Pilots shall maintain listening watch on this frequency and shall refrain from asking questions about the start-up clearance.

The following time parameters apply:

- t_i - 25 min prior to EOBT for unregulated flights.
- 30 min prior CTOT for ATFM regulated flights.
- t_t - 11 min prior to EOBT for unregulated flights.
- 16 min prior to CTOT for ATFM regulated flights.
- t_0 - 1 min.
- t_1 - 5 min.
- t_2 - 1 min.

3.2. DE-ICING

3.2.1. GENERAL

Special areas are assigned for the de-icing of ACFT.

De-icing notification to the de-icing coordinator is mandatory at least 15 minutes prior to off-block on frequency 130.6 or via telephone (APT phone 181 - 65 66; external phone 089 - 977 - 65 66).

ATC will arrange the de-icing sequence and assign the respective de-icing area.

During the de-icing treatment the assigned ATC frequency has to be monitored.

With start-up request, Delivery shall be informed about the need of an engine run-up after de-icing in accordance with departure preparations.

The actual TSAT should be taken into account during de-icing procedures.

The de-icing times (except of fanblade de-icing) shall not be taken into consideration when determining the TOBT. The end of fanblade de-icing must be before TOBT.

De-icing for an ACFT shall be requested as early as possible.

3.2.2. COMMERCIAL JET ACFT

The de-icing on the areas listed below is performed with ACFT engines running. The following facilities are also available for ATR 42/72 with operative propeller braking.

MUNICH De-icing:	NORTH 13 (RWY 26R)	122.550	SOUTH 13 (RWY 26L)	130.2
	NORTH 14 (RWY 26R)	121.9	SOUTH 14 (RWY 26L)	121.6
	NORTH 15 (RWY 26R)	121.650	SOUTH 15 (RWY 26L)	121.875
	NORTH 1 (RWY 08L)	121.650	SOUTH 1 (RWY 08R)	121.6
	NORTH 2 (RWY 08L)	121.9	SOUTH 2 (RWY 08R)	121.875
	NORTH 3 (RWY 08L)	122.550	SOUTH 3 (RWY 08R)	130.2

EDDM/MUC
MUNICH

4 MAR 16

JEPPesen

10-1P7

MUNICH, GERMANY

AIRPORT BRIEFING

3. DEPARTURE

3.2.3. COMMERCIAL PROPELLER-DRIVEN ACFT

Propeller-driven ACFT (except ATR 42/72) are de-iced on Aprons 1, 2, 3, 6, 7, 8, 9, 11 and 12 at their respective parking position. De-icing is performed with engines switched off. Information on possible delay shall be obtained from Delivery before starting the de-icing procedure.

3.2.4. GENERAL AVIATION ACFT

On Apron 11 a de-icing area is assigned to General Aviation ACFT. De-icing is performed with engines switched-off.

3.3. START-UP, PUSH-BACK & TAXI PROCEDURES**3.3.1. START-UP****3.3.1.1. AUTOMATIC TARGET OFF-BLOCK TIME (TOBT)**

For ACFT which are not subject to a direct turn-round, the TOBT will be generated at "Actual Off-Block from the directly preceding position" or depending on the EOBT.

The automatic TOBT calculation is based on the Estimated In-Block Time (EIBT), the Minimum Ground Time (MGT) and the EOBT.

For CTOT flights the TOBT cannot be generated automatically, if TOBT plus taxitot is after the end of the slot.

If the TOBT is not generated automatically for a flight, it must be entered by the TOBT-responsible person. In case of changing the ACFT, the original TOBT will remain unchanged.

3.3.1.2. PERSON RESPONSIBLE FOR TOBT

The handling agent, the airline company (for flights without a handling agent) or the Pilot-in-Command (for General Aviation Flights without a handling agent) is responsible for the correctness of and adherence to the TOBT.

3.3.1.3. TOBT CORRECTION/DELETION

If the TOBT cannot be adhered to, it must be corrected by the TOBT responsible person. Until the Target Start-Up Approval Time (TSAT) has been issued, the TOBT can be corrected as often as desired. After the TSAT has been issued, the TOBT may be corrected up to a maximum of three times. The 4th TOBT update can lead to disadvantages for sequencing. If the TOBT is changed to an earlier time, the new TOBT must be 5 minutes later than the actual time.

The TOBT may not be set earlier than 10 minutes before the current EOBT of the ATC flight plan.

As the TOBT is triggering additional processes at the APT, TOBT adaptations of more than 3 minutes shall be done as soon as possible. If a flight is to be withdrawn from the TOBT and/or TSAT calculation, the TOBT shall be cancelled. To set this process in motion again, the TOBT shall be filed anew. It is still mandatory to send a delay message to the IFPS if the EOBT deviates by 15 minutes or more.

3.3.1.4. TOBT DIALOGUE

The TOBT dialogue will take place using the following channels:

- Sequence planner;
- Internal system of the airline/handling agent (via interface);
- CSA Muenchen (internet dialogue);
- FMG traffic operation center following enquiry via phone +49 89 975 21135.

For General Aviation flights:

Phone +49 89 975 21498 (MON - SUN 0530 - 2220 LT)

Outside opening times by calling the FMG traffic operation center:

Phone + 49 89 975 21135.

EDDM/MUC
MUNICH

11 MAR 16

JEPPesen

10-1P8

MUNICH, GERMANY
AIRPORT BRIEFING

3. DEPARTURE

3.3.1.5. TARGET START-UP APPROVAL TIME (TSAT)

The TSAT is published 40 minutes prior to TOBT. The TSAT is the time at which an ACFT may expect start-up clearance at the latest. Changes to the TOBT do not affect the existing TSAT in general, as long as the new TOBT value is not later than TSAT. The TSAT confirmation is accomplished via the TOBT reporting path and the electronic display at the parking position (ADS) if available. The TOBT responsible person must ensure the correct transmission of the TSAT to the pilot.

3.3.1.6. PROCESS

The "Pre-Departure Sequence" will be determined in accordance with TSAT. On reaching the TOBT, the ACFT must be ready for start-up and/or apron de-icing and pilots shall be prepared listening on frequency MUENCHEN DELIVERY.

The pilot can request start-up and enroute clearance 5 minutes or less before the TOBT. Depending on the TSAT as well as on the actual operational traffic situation, Delivery will grant start-up and enroute clearance. Shifting to an earlier TOBT of more than 5 minutes shall be done by the TOBT responsible person. The approval for push-back/taxi shall be requested not later than 5 minutes after start-up approval has been issued. Otherwise, the TOBT will be deleted and must be entered again. For datalink departure clearance (DCL), the published procedures and the time parameters continue to apply.

The TSAT is transmitted ("Start-up approved according to TSAT - hh:mm - ") using CLD (departure clearance uplink message - issuance of start-up approval and enroute clearance by Delivery).

The push-back/taxi request shall be made at TSAT +/- 5 minutes.

3.3.1.7. REMOTE HOLDING

Remote Holding can be requested via CSA Muenchen or Sequence Planner.

3.3.2. PUSH-BACK & TAXIING

To obtain push-back instructions from a nose-in position, pilots must request permission from MUNICH Apron.

In order to avoid delays in taxiing, pilots are instructed to start engines during push-back.

After completion of push-back, "ready to taxi" shall be reported to MUNICH Apron.

To obtain instructions for taxiing from a taxi-out position, pilots must request taxi clearance from MUNICH Apron reporting "ready to taxi".

On initial radio contact with MUNICH Apron, pilots shall report position and RWY assigned.

Permission for push-back or taxiing from a position may only be requested if the pilot can perform the manoeuvre immediately.

3.4. NOISE ABATEMENT PROCEDURES

Between 2200-0600LT departures of ACFT with wake turbulence category "H" and "J" from RWY 26L via MUN shall use a departure route with designator "W" only.

3.5. RWY OPERATIONS

3.5.1. USE OF RWYS

Departing ACFT into N and NE directions have to expect RWY 08L/26R.

Departing ACFT into NW directions have to expect RWY 08L or 26L.

Departing ACFT into SW, S and SE directions have to expect RWY 08R/26L.

3.5.2. FREQUENCY CHANGE

While being transferred from Ground to Tower, initial call shall be omitted and Tower frequency shall be monitored to be ready for further clearances at all times.

After departure, pilots shall change to the pre-selected departure frequency only when advised by Tower.

MUNICH, GERMANY
AIRPORT BRIEFING

3. DEPARTURE

3.5.3. HIGH INTENSITY RWY OPERATIONS

Pilots should ensure that they are able to follow the clearance to the take-off position or the take-off clearance without delay to keep RWY occupation times as short as possible.

Use CAT II/III holding position only during low visibility operation (CAT II/III) or when instructed by Tower. Otherwise taxi forward to CAT I holding position. Cockpit checks should be completed prior to line-up, and any checks requiring completion on the RWY should be kept to a minimum.

ATC instructions to be ready for immediate departure ("be ready for/expect immediate departure") will be issued if an immediate realization of the succeeding take-off clearance is possible, occupying the RWY as short as possible.

Pilots unable to perform, shall inform ATC accordingly without delay.

Pilots shall prepare for the following take-off runs available:

RWY	ACFT	TWY intersection	TORA ft/m
08L	heavy + medium (JET)	A1 / A2	13,123' / 4000m
	medium (JET)	A3	12,467' / 3800m
	light (JET)	A4	9252' / 2820m
	turboprop	A6	7218' / 2200m
08R	heavy + medium (JET)	B1 / B2	13,123' / 4000m
	medium (JET)	B3	12,467' / 3800m
	light (JET)	B4	9318' / 2840m
	turboprop	B6	7283' / 2220m
26L	heavy + medium (JET)	B14 / B15	13,123' / 4000m
	medium (JET)	B13	12,467' / 3800m
	light (JET)	B12	9121' / 2780m
	turboprop	B10	7218' / 2200m
26R	heavy + medium (JET)	A14 / A15	13,123' / 4000m
	medium (JET)	A13	12,467' / 3800m
	light (JET)	A12	9121' / 2780m
	turboprop	A10	7415' / 2260m

The pilot may ask for shortened take-off runs.

RADAR MINIMUM ALTITUDES

MUNICH Radar (APP) 123.9 127.950 128.250 *131.225	Apt Elev 1487'	Alt Set: hPa (IN on request) Trans level: By ATC Trans alt: 5000' The MVA is the lowest altitude which may be used for RADAR vectors for IFR flights taking into account the minimum safe height (1000' above the highest obstacle within a radius of 8 km) and airspace structure (lower limit of the controlled airspace plus a buffer of 500'). Below the MVA, IFR flights will normally be cleared on published IFR procedures only. Altitudes in brackets apply for the period from AIRAC date in November until AIRAC date in March in order to meet required obstacle clearance at cold temperatures.

VISUAL DOCKING GUIDANCE SYSTEM (SAFEGATE)

STANDARD DOCKING PROCEDURE

1. Line-up to center acft symbol with green reference bar.
2. Check correct acft type is flashing on display.
3. Check green bottom lights are flashing.
4. When nosegear passes over first sensor, acft type display and green bottom lights will both change from flashing to steady.
5. Green closing rate lights will move upwards in relation to actual acft speed.
6. At 10'/3m before the STOP position yellow lights will illuminate.
7. Reaching the STOP position, all four red lights will illuminate current with the displayed command "STOP".
8. If correctly positioned "OK" is displayed. Beyond 3'/1m of the nominal STOP position, a warning will be displayed in a flashing mode "TOO FAR".

EMERGENCY STOP: All four red STOP position lights and "STOP" will flash.

Type: Terminal

Effectivity: Temporary

Begin Date: Immediately

End Date: Until Further Notice

For CDO, report ATIS received when contacting arrival sector; ACFT will be vectored to reach the intermediate approach level on the LOC course with about 1 NM of level flight left until intercepting GS, the purpose of this intermediate approach segment is to reduce speed; assumed descent angle 3°; participants are invited to send regular feedback on CDO performance to cdo-feedback@dfs.de.
