AIRPORT BRIEFING

1. GENERAL

1.1. ATIS

ATIS 121.075

1.2. NOISE ABATEMENT PROCEDURES

For additional depiction refer to 10-4.

1.2.1. REVERSE THRUST

The use of reverse power from the idle regime is not allowed from 2300-0700LT except for safety reasons, in this case communicate with tower immediately.

1.2.2. RUN-UP TESTS

Run-up tests higher than idle regime are allowed H24 at qualified motor tests areas.

The request of run-up test clearance in any regime type and any question about the test procedure must be addressed to:

Centro de Operaciones

Tel: 34-961 598 535

Fax: 34-961 598 537

1.3. LOW VISIBILITY PROCEDURES (LVP)

1.3.1. GENERAL

LVP will be applied when RVR for RWY 30 and general visibility in the movement area, for RWY 12 (or also for RWY 30, without RVR) is 550m or below.

Pilots will be informed about application of LVP by ATC and ATIS "LOW VISIBILITY PROCEDURE IN OPERATION".

Pilots will be also informed by ATC when the application of the LVP is cancelled that will occur when RVR or the horizontal visibility is above 800m.

During LVP, operations shall be cancelled except the commercial and emergency flights.

Pilots will proceed to verify at every moment the ACFT position, checking that taxiing is being executed under total safety conditions. In case of being disoriented or in doubt, pilots will stop the ACFT and will notify ATC immediately. Usually, the movement of only one ACFT at the same time will be authorized in the manoeuvring area when LVP is applied.

1.3.2. ARRIVAL

ACFT that have already landed will notify: "RWY vacated" when ACFT passes the RWY vacated board on the TWY, after leaving the RWY.

Entry into all stands will be carried out with the guidance of Follow-me vehicle.

At the apron entry, ACFT must wait for the arrival of the Follow-me vehicle in order to be guided to the assigned stand and will notify TWR: "FOLLOW-ME in sight".

1.3.3. DEPARTURE

Pilots will request start-up or taxi clearance, notifying the stand in which they are. In order to establish a better transit sequence, pilots must not request clearance for engines' start-up, push-back or taxiing, when the RVR values or the meteorological visibility is below their operational minimums.

When the RVR/visibility is lower than 550m, and not below 350m, only one ACFT at a time will be authorized to taxi in the manoeuvring area.

Exit out of all stands will be carried out with the guidance of Follow-me vehicle.

When a departing ACFT has to return to the apron, the pilot shall inform TWR and wait for new taxiing instructions.

TAXIING

In the curved section of TWYs N3 to H7, S1 to T1, S3 to T3, RWY to TWY T1 and GATE B to apron, ACFT must accomplish an "oversteering" manoeuvre to correct the trajectory and maintain the safety distance from the outer wheel of the main gear and the edge of the TWY pavement area.

Under LVC (only take-off operations are allowed) and night operations ACFT taxiing shall be guided by signalman from and to the RWY holding position.

To THR 12: Leave apron via GATE B up to TWY N2, taxiing via TWYs N2, N3, N4 and H9.
