SEVILLE, SPAIN
AIRPORT BRIEFING**1. GENERAL****1.1. ATIS**

* ATIS 118.175

1.2. NOISE ABATEMENT PROCEDURES**1.2.1. RUN-UP TESTS**

Run-up tests higher than idle regime are not allowed on any stand on the apron. They must be requested contacting Centro de Operaciones (TEL +34-954-449-112).

1.3. LOW VISIBILITY PROCEDURES (LVP)**1.3.1. GENERAL**

LVP will be in force when RVR for RWY 27 or RVR for RWY 09, or, in case of RVR equipment failure, horizontal visibility on manoeuvring area is below 550m.

Pilots will be informed about the application of LVP by ATC via ATIS with the following text: "LOW VISIBILITY PROCEDURE IN OPERATION".

Pilots will be informed by ATC when the application of the procedures is cancelled, this will take place when RVR or VIS is above 800m and an improvement tendency is expected.

1.3.2. GROUND MOVEMENT

Pilots will proceed to verify at every moment the ACFT position, checking that taxiing is being executed under total safety conditions. In case of being disoriented or in doubt, pilots will stop the ACFT immediately and notify ATC.

Under low visibility conditions, the following measures in apron will be taken:

- The use of G2 is not allowed.
- The use of the G9 segment towards the stands 10 thru 16 is not allowed.
- The entry to and the exit from the General Aviation stands are not allowed.
- The exit from stands 40 thru 44 is not allowed.
- The entry to and the exit from stands 10 thru 16, the exit from stands 15A, 15B and 16A, 17 thru 19 and 34 thru 39, and the entry to stands 40 thru 44 will be carried out controlled by a signalman.
- The taxiing along G1, G3 and G9 will be carried out with Follow-me car guidance.

1.3.2.1. ARRIVALS

On exiting RWY report: "RUNWAY VACATED", in sight of the yellow/green centerline lights or/and RWY vacated boards.

At the apron entry, they must wait for the arrival of a Follow-me car in order to be guided to the assigned stand, notifying to Tower: "FOLLOW-ME IS IN SIGHT".

Entry to G5 is not allowed from TWY A-2.

SEVILLE, SPAIN

AIRPORT BRIEFING

1. GENERAL

1.3.2.2. DEPARTURES

Pilots will request clearance for starting-up or taxiing, notifying the stand where they are.

Pilots will avoid requesting clearance for start-up, push-back or taxiing when RVR or VIS is below their operational minimum.

Only one ACFT at the same time in the movement area will be authorized.

In case of an ACFT having to return to apron, the pilot will inform Tower and wait for new instructions for taxiing.

Exits from stands 10 thru 16, 17 thru 19, 15A, 15B, 16A and 34 thru 39, under low visibility conditions, will be carried out upon prior permission requested to Tower and after its clearance. Once the manoeuvre has been started, the pilot will notify Tower " FOLLOW-ME IN SIGHT ", when this happens. Follow-me car will guide the ACFT to the appropriate gate.

Exit thru the gates for each stand and TWY A to TWY HP-1 or HP-2 when RWY 09 in use and HP-3 or HP-4 when RWY 27 in use.

Take-off is not permitted for Code F ACFT.

ACFT from/to Airbus Defence & Space South may taxi via TWY HP-5 or S2.

- When the pilot of an ACFT leaving via HP5 or S2 notices a lack of visibility, he will stop the ACFT, inform Tower and wait for the arrival of a Follow-me car in order to be guided to the assigned RWY threshold to take-off, reporting Tower: "FOLLOW-ME IN SIGHT".
- When RVR is less than 185m, the Follow-me car guidance will be required to use the TWYs HP5 and S2, so in these conditions the ACFT will confirm the presence of a Follow-me car before entering such TWYs, reporting Tower: "FOLLOW-ME IN SIGHT".

ACFT from/to Maestranza Military Area will taxi via TWY S-2.

- When the pilot of an ACFT leaving via S2 notices a lack of visibility, he will stop the ACFT, inform Tower and wait for the arrival of a Follow-me car in order to be guided to the assigned RWY threshold to take-off, reporting Tower: "FOLLOW-ME IN SIGHT".
- When RVR is less than 185m, the Follow-me car guidance will be required to use the TWY S2, so in these conditions the ACFT will confirm the presence of a Follow-me car before entering such TWYs, reporting Tower: " FOLLOW-ME IN SIGHT".

1.3.3. COMMUNICATION FAILURE

1.3.3.1. ARRIVING ACFT

Hold position in the first section of the TWY in which the sensitive area of ILS remains free and wait for the arrival of a Follow-me car that will lead to the position of assigned stand.

1.3.3.2. DEPARTING ACFT

Continue by the assigned route to the clearance limit, taking extreme caution to avoid detours. Once that point has been reached, maintain the position and wait for the arrival of a Follow-me car in order to be guided to the stand or the assigned holding point.

SEVILLE, SPAIN
AIRPORT BRIEFING

1. GENERAL

1.4. TAXI PROCEDURES

1.4.1. GENERAL

Pilots are responsible to avoid collision with other ACFT or obstacles during taxiing.

TWYs HP-5 and S-2 available by ATC.

Limited to MAX ACFT with code letter C for:

- TWYs G-1, G-2, G-3 and G-9.

Limited to MAX ACFT with code letter D for:

- TWYs G-4 (between Gate 3 and Gate 4), G-6 and HP-4.

Limited to MAX ACFT with code letter E for:

- TWYs G-4 (between Gate 4 and Gate 5), G-5 and G-8.

Use of TWYs E-5, HP-5, N-2 and S-2 is only allowed for ACFT heading for Airbus Defence & Space facilities or Maestranza Military Apron.

1.4.2. CODE F ACFT OPERATIONS

1.4.2.1. GENERAL

Prior permission required for operation of Code F ACFT.

Code F ACFT must taxi at reduced speed, with idle engine regime and, whenever possible, with outboard motors off.

1.4.2.2. ARRIVAL

Landing RWY 09: Exit via TWY E-5 or HP-3, continue via TWY A entering apron via G8.

Landing RWY 27: Exit via TWY E-1 or HP-1, continue via TWY A entering apron via G7.

1.4.2.3. DEPARTURE

Take-off RWY 09: Exit via G7 to continue taxiing via TWY A to HP-1.

Take-off RWY 27: Exit via G8 to continue taxiing via TWY A to HP-3.

1.5. PARKING INFORMATION

Parking on stands 1 thru 4 with nose to Northeast or Southwest.

Parking on stand 5 with nose to Northeast.

Parking on stands 30, 30A and 33A with nose to West.

On stands 1 thru 5 push-back required, except for EMBRAER 190/195, B717-200, B737 (all series), MD80 (all series), A318, A319, A320 and A321 which may carry out autonomous exit at minimum regime under the responsibility of the pilot in command, whenever the ACFT located at their RIGHT is one of the mentioned models.

Stands 6, 12 and 40 on General Aviation Apron R1 available for helicopter.

1.6. OTHER INFORMATION

RWY 09 right-hand circuit for traffic arriving from South.

RWY 27 right-hand circuit for traffic arriving from North.

Birds in vicinity of APT.

AIRPORT BRIEFING

2. ARRIVAL

2.1. SPEED RESTRICTION

- 210 KT at the beginning of the final turn to intercept the ILS course when the ACFT is located within 20NM of THR.
- 180 KT once the final turn is completed and established on the ILS localizer when the ACFT is located within 20NM of the THR.
- RWY 27: MAX 160 KT when crossing SPP NDB.

ACFT with cruising speed lower than the aforementioned shall maintain cruising speed up to the adjusting fix concerned.

2.2. TAXI PROCEDURES

2.2.1. GENERAL

Tower will provide the stand number. The allowed maximum power to enter stands 34 thru 39 is limited.

Assignment of taxiing routes, depending on RWY in use and save for reasons advising otherwise, will be made according to the following apron entry procedures:

2.2.2. RWY 09 IN USE

STANDS	ENTRY BY
1 thru 4	G5 or G8
5 thru 15	G8
15A	G6 or G8
15B, 16	G8

VISUAL DOCKING GUIDANCE SYSTEM

GENERAL

This system contains information about azimuth guidance (shows the aircraft position with relation to the centre line of the parking area) and distance to the stop position (based on a laser radar measurement), that is provided by a display unit, in front of the cockpit.

DISPLAY UNIT

Consists of:

1. One alphanumeric presentation line of 4 characters, composed by yellow indicators, which can indicate the following information: Aircraft type, stand position ("STND"), stop position ("STOP"), aircraft parked in the exact position ("OK"), surpassed stop position ("TOO FAR") and speed exceeding in the approach ("SLOW DOWN").
2. Azimuth guidance display with centre line indicator (centred guidance and design of yellow and red deviation arrows), as well as red lights when stop aircraft is indicated.
3. Distance indicator to the stop position composed by yellow and black lines located in a centred vertical column.

PILOT INSTRUCTIONS

1. Check that the indicated aircraft type is the appropriate.
2. Taxi in-line watching centre line guidance.
3. Check that the distance indicator is completely yellow. It means that the system is identifying the aircraft.
4. Observe the yellow arrow located in the centre line guidance indicator to follow the correct position and direction. A flashing red arrow indicates the direction to turn.
5. If the aircraft speed exceeds the programmed one, the unit display indicates "SLOW DOWN"; the taxi speed must be reduced.
6. The distance indicator is activated at 52'/16 metres before the stop position changing gradually from yellow to black lights and showing the remaining distance to the stop position as yellow lines go out (each line indicates 2'/0.66 m run).
7. At the stop position the distance indicator is shown completely black and "STOP" will appear in the upper presentation line.
8. If the parking is correct, it shows "OK". If the aircraft exceeds the stop position the indicator will show "TOO FAR".

When the aircraft identification is not achieved by the system or when any obstacle is detected during the entrance into the parking position, the display will show "STOP". In this case, the ending of aircraft manoeuvre until the stop position, previous contact with SEVILLE Tower, will be carried out under the guidance of a FOLLOW ME vehicle.
