When de-icing treatment is carried out at engines start-up position, engines start-up is possible with the permission of DOMODEDOVO Apron and technical specialist responsible for engines start-up after completing the treatment of ACFT tail part and during wing treatment.

De-icing treatment of propeller-driven ACFT with operating engines is prohibited on de-icing areas DA1 and DA2.

In case when the safety of engines start-up is not provided or the safety of the ACFT movement with started up engines to de-icing areas DA1 and DA2 is not provided, then the flight crew has the right to cancel de-icing treatment of ACFT with started up engines.

After reaching the transfer of control limit, the flight crew shall change over to communication with DOMODEDOVO Tower.

The flight crew shall change over to communication with DOMODEDOVO Apron at junction of TWY M with DA1 and DA2, by the instruction of DOMODEDOVO Tower.

On initial radio contact with DOMODEDOVO Tower the flight crew can report about their readiness to taxi to the RWY along suitable TWY and execution of the non-stop take-off, after that receive the instructions on further taxiing from DOMODEDOVO Tower.

The absence of such report shall mean for DOMODEDOVO Tower that the flight crew of the given ACFT intends to execute take-off from the RWY extremity.

The flight crew which requires backtracking (including the line-up position on RWY 32R from TWY B8) must report DOMODEDOVO Tower about it on reaching the RWY holding position.

The flight crew of the ACFT, which is at the RWY holding, must be ready to line up and start take-off run immediately after receiving the clearance.

3. DEPARTURE

3.3. RWY OPERATIONS

3.3.1. MINIMUM RWY OCCUPATION TIME

Prior to reaching the line-up position the flight crew shall inform DOMODEDOVO Tower if unable to carry out the instruction to reduce the time of the RWY occupation and about the required time for preparation.

Pre-flight checks in the crew cabin must be completed by the flight crew prior to occupation of the line-up. The checks to be executed during the ACFT stay on the RWY shall be reduced to a minimum.

If take-off is executed from the RWY extremity, the manoeuvre to line-up shall be carried out either immediately after the ACFT, which has started take-off run, or after the ACFT, which has crossed the RWY THR before landing.

If take-off is executed from the intersection of TWY and the RWY, the flight crew must start the manoeuvre to line-up immediately after the taking off (landing) ACFT has passed abeam the RWY holding position where the ACFT is getting ready for take-off from the intersection.

The flight crew shall execute take-off immediately after receiving take-off clearance.

The conditional clearances shall be used when the appropriate ACFT are visible to both DOMODEDOVO Tower and the flight crew. An ACFT, due to which a conditional clearance is issued, is the first ACFT to proceed before another relevant ACFT. The conditional clearance shall be issued in all cases in the following sequence and includes the following: "ACFT identification, instructions, clearance + short repetition of the instruction".

This means that the flight crew getting a conditional clearance is required to identify the ACFT, due to which a conditional clearance is issued.

3.4. NOISE ABATEMENT PROCEDURES

3.4.1. TAKE-OFF AND CLIMBING PROCEDURE

RWY 14L/R are noise preferential RWYs which shall be used to the maximum degree possible. Noise abatement procedures shall not be executed at the expense of reduction of flight safety.

Restrictions

During take-off from RWYs 32L/R pilots shall strictly comply with the established departure procedures to avoid overflying the residential areas of the APT and Domodedovo town.

Change of flight direction (course) after take-off is permitted only after reaching 990' (396').

Noise Abatement Procedures NADP1 and NADP2

Two variants of take-off and climb procedures are applied: NADP1 and NADP2 (ICAO Doc 8168, Volume 1, Part V, Chapter 3).

Control of ACFT Noise within the Aerodrome Area

Control over ACFT noise shall be maintained via the noise monitoring points. Noise level must not exceed 85 dB 0700-2300LT and 75 dB 2300-0700LT.

DOCKING GUIDANCE SYSTEM (SAFEDOCK)

GENERAL

The system is formed by centerline indicators (Azimuth Guidance Unit), approach index and stop position indicator, so as alphanumeric indication, composed of a display unit, control and laser scanner at the top of a pole located at the parking axis extension in the surface of the apron, in front of the cockpit.

The display unit shows the following information types:

- Alphanumeric information: aircraft type, "OK", "STOP", "TOO FAR", "ID FAIL" and "DOWN GRAD".
- Indication of activated system: It is shown by mobile yellow arrows.
- Indication of aircraft capture: It is shown by a yellow "T", which vertical arm is the docking direction and the horizontal arm is the stop position.
- Indication of azimuth: The off-center respect to the docking direction is shown by a yellow arrow. A flashing red arrow shows the direction to correct.
- Indication of distance: The "T" vertical arm is going to be reduced from 39'/12m before the stop position. Each line of LEDs (light-emitting diode) represents 2'/0.5m approximately.
- Indication of stop: The "T" horizontal arm remains at 2'/0.5m to the stop position. When it is just reached, the display unit shows "STOP" and two rectangular groups of red LEDs will be on.

PILOT INSTRUCTIONS

- Check that the correct acft type is displayed.
The mobile arrows indicate that the system is activated.

- DOCKING
Follow the LEDs line.
When the "T" centerline indication becomes yellow, the acft is caught by the laser and being identified.

3. IDENTIFICATION

When the acft is at less than 39'/12m from the stop position, the display will show closing rate indicated by turning off one row of centerline indicator LEDs in front of the arrow for each 2'/0.5m advances into the gate.

The acft is approximately at 33'/10m from the stop position. The yellow acft symbol indicates acft LEFT of centerline and the flashing red arrow shows the turning direction.

The acft is approximately at 16'/5m from the stop position. The yellow acft symbol indicates acft RIGHT of centerline and the flashing red arrow shows the turning direction.

4. STOP

When the correct stop position is reached, the display shows "STOP" and the red LEDs will be on.

5. DOCKING ON

When the acft is correctly parked, the display unit will show "OK" some seconds later.

- If the acft has overshoot the stop position, "TOO FAR" will be displayed.

7. IDENTIFICATION FAILURE

The acft is identified during the entrance into the parking position. If for any reason the identification is not achieved "ID FAIL", the display will show "STOP" and "WAIT". If the acft is identified, docking can proceed. If not, the display will show "STOP".

8. SLOW DOWN

When the acft exceed the pre-programmed approach speed, the display unit will show "DOWN GRAD".
